The History and Geography of the Bible Story: A Study Manual by Bob and Sandra Waldron is one of the best resources of its kind for individual and class study. It is important for each student of the Bible to gain information about the history and geography of the Bible in order to better understand the context of the message of salvation. The Waldrons have demonstrated an ability to take difficult material and make it both understandable and usable. The book can do several things for the user: (1) it will provide a complete survey of the Bible from Genesis to Revelation; (2) it will give one a good summary of the history of the nations involved in sacred history; (3) it will acquaint one with the geography of the Bible lands. The good maps add tremendously to the quality and usefulness of the book. There are a total of 52 lessons. The first lessons discusses man as an intelligent being. The next 7 lessons give a brief look at all the Bible Lands. The rest of the lessons (9-52) correlate the Bible history and geography together. There are plenty of full color maps with corresponding blank maps for the student to fill in. Every few lessons, there is a section of review questions. Charts, lists, and easily read narrative make this a great study for your Bible class or personal study.

AP Human Geography Review Book and Practice Test Questions [Updated for the New Exam Description]

United States History and Geography, Student Edition

This little book is confined to very simple “reading lessons upon the Form and Motions of the Earth, the Points of the Compass, the Meaning of a Map: Definitions.” The shape and motions of the earth are fundamental ideas—however difficult to grasp. Geography should be learned chiefly from maps, and the child should begin the study by learning “the meaning of map,” and how to use it. These subjects are well fitted to form an attractive introduction to the study of Geography: some of them should awaken the delightful interest which attaches in a child's mind to that which is wonderful—incomprehensible. The Map lessons should lead to mechanical efforts, equally delightful. It is only when presented to the child for the first time in the form of stale knowledge and foregone conclusions that the facts taught in these lessons appear dry and repulsive to him. An effort is made in the following pages to treat the subject with the sort of sympathetic interest and freshness which attracts children to a new study. A short summary of the chief points in each reading lesson is given in the form of questions and answers. Easy verses, illustrative of the various subjects, are introduced, in order that the children may connect pleasant poetic fancies with the phenomena upon which “Geography” so much depends. It is hoped that these reading lessons may afford intelligent teaching, even in the hands of a young teacher. The first ideas of Geography—the lessons on “Place”—which should make the child observant of local geography, of the features of his own neighbourhood, its heights and hollows and level lands, its streams and ponds—should be conveyed viva voce. At this stage, a class-book cannot take the place of an intelligent teacher. Children should go through the book twice, and should, after the second reading, be able to answer any of the questions from memory. Charlotte M. Mason
