Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies, or taking an introductory MA course as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative 'practice to theory' approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include tasks with commentaries, a glossary of key terms, and an annotated further reading section. Vocabulary is the foundation of language and language learning and as such, knowledge of how to facilitate learners' vocabulary growth is an indispensable teaching skill and curricular component. Exploring Vocabulary is designed to raise teachers' and students' awareness of the interplay between the linguistic, psychological, and instructional aspects of vocabulary acquisition. It focuses on meeting the specific vocabulary needs of English language learners in whatever instructional contexts they may be in, with a special emphasis on addressing the high-stakes needs of learners in academic settings and the workplace. Dee Gardner also introduces a new Common Core Vocabulary, constructed from two of the most well-known and contemporary corpora of English—the British National Corpus and the Corpus of Contemporary American English. Exploring Vocabulary is an essential book for undergraduate and postgraduate students studying vocabulary within Applied Linguistics, TESOL, or Teacher Education, as well as any teacher working with English language learners.

This edition of Science and Creationism summarizes key aspects of several of the most important lines of evidence supporting evolution. It describes some of the positions taken by advocates of creation science and presents an analysis of these claims. This document lays out for a broader audience the case against presenting religious concepts in science classes. The document covers the origin of the universe, Earth, and life; evidence supporting biological evolution; and human evolution. (Contains 31 references.) (CCM)

This book offers a meso-level description of demographics, science education,

and science teacher education. Representing all 13 Canadian jurisdictions, the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada ' s successes. The book highlights commonalities, consistencies, and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction-specific chapters. Although the analysis indicates a network of policy and practice issues warranting further consideration, the diverse nature of Canadian science education makes simple identification of causal relationships elusive. Canada has a reputation for strong science achievement. However, there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education. This book fills that gap by presenting a thorough description of science education at the provincial/territorial level, as well as a more holistic description of pressing issues for Canadian science education.
