THIS VALUABLE ANATOMY BOOK, Written in the 1850s by a young doctor, Henry Gray. Gray's Anatomy was the most comprehensive and accessible anatomy of its time. This beautifully produced slipcased volume contains the historic text of the second edition and all of Henry Vandyke Carter's masterly drawings. It is essential reading for anyone with an interest in the history of medicine or in the amazingly complex machine that is the human body. HENRY GRAY [1827 - 1861] was an English anatomist and surgeon most notable for publishing the book Gray's Anatomy. He was elected a Fellow of the Royal Society (FRS) at the age of 25. While still a student, Gray secured the triennial prize of Royal College of Surgeons in 1848 for an essay entitled The Origin, Connexions and Distribution of nerves to the human eye and its appendages, illustrated by comparative dissections of the eye in other vertebrate animals. In 1852, at the early age of 25, he was elected a Fellow of the Royal Society, and in the following year he obtained the Astley Cooper prize of three hundred guineas for a dissertation "On the structure and Use of Spleen." Gray's Anatomy is probably one of the most iconic scientific books ever published: an illustrated textbook of anatomy that is still a household name 150 years since its first edition, known for its rigorously scientific text, and masterful illustrations as beautiful as they are detailed. The Making of Mr Gray's Anatomy tells the story of the creation of this remarkable book, and the individuals who made it happen: Henry Gray, the bright and ambitious physiologist, poised for medical fame and fortune, who was the book's author; Carter, the brilliant young illustrator, lacking Gray's social advantages, shy and inclined to religious introspection; and the publishers - Parkers, father and son, the father eager to employ new technology, the son part of a lively circle of intellectuals. It is the story of changing attitudes in the mid-19th century of the social impact of science, the changing status of medicine; of poverty and class; of craftsmanship and technology. And it all unfolds in the atmospheric milieu of Victorian London - taking the reader from the smart townhouses of Belgravia, to the dissection room of St George's Hospital, and to the workhouses and mortuaries where we meet the friendless poor who would ultimately be immortalised in Carter's engravings. Alongside the story of the making of the book itself, Ruth Richardson reflects on what made Gray's Anatomy such a unique intellectual, artistic, and cultural achievement - how it represented a summation of a long half century's blossoming of anatomical knowledge and exploration, and how it appeared just at the right time to become the 'Doctor's Bible' for generations of medics to follow.
