

## Groin Boils Manual Guide

The laboratory guide directs readers through a series of dissection activities for use in the lab accompanied by new, full color photos and figures. The guide can be used as a stand-alone dissection guide or in conjunction with any Anatomy and Physiology Laboratory Manual. A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, ‘arms-length’ HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

Acne vulgaris is an extraordinarily common, worldwide skin ease. Some see the disorder as merely cosmetic. Nonetheless, few skin diseases cause as much physical and psychological misery as this scourge of adolescence. Dermatologists of course have more than a passing familiar ity with acne vulgaris. Recognition is easy but there is still an extraordinary amount of controversy concerning causa tive factors and the best modes of treatment. Recent studies have brought forth some important findings about which practicing physicians know too little. This volume“ ACNE: MORPHOGENESIS AND TREAT MENT” is a surprising book. What features make it so unique? This is the first complete account of the great diver sity of clinical manifestations. Moreover, gross morphology is coordinated with a thorough microscopic analysis of evolu tion of the disease. The material is presented in a readable and stimulating way. References are limited because they have been carefully selected. The authors emphasize that this richly illustrated work is intended for physicians who care for acne patients. Accord ingly, this is above all a practical treatise to assist doctors to diagnose and treat acne, and not only acne vulgaris but all the species of acne. This work is an overview of the entire acne problem with contributions from bacteriology, endocrinology, physiology, anatomy, immunology, cellular kinetics, and experimental acne. Above all it concludes with an optimistic presentation of therapeutic strategies which make it possible for the in formed physician to control the abominable effects of this distressing disorder.

These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.

Praise for the first edition: "Aberth wears his very considerable and up-to-date scholarship lightly and his study of a series of complex and somber calamites is made remarkably vivid." -- Barrie Dobson, Honorary Professor of History, University of York The later Middle Ages was a period of unparalleled chaos and misery -in the form of war, famine, plague, and death. At times it must have seemed like the end of the world was truly at hand. And yet, as John Aberth reveals in this lively work, late medieval Europeans' cultural assumptions uniquely equipped them to face up positively to the huge problems that they faced. Relying on rich literary, historical and material sources, the book brings this period and its beliefs and attitudes vividly to life. Taking his themes from the Four Horsemen of the Apocalypse, John Aberth describes how the lives of ordinary people were transformed by a series of crises, including the Great Famine, the Black Death and the Hundred Years War. Yet he also shows how prayers, chronicles, poetry, and especially commemorative art reveal an optimistic people, whose belief in the apocalypse somehow gave them the ability to transcend the woes they faced on this earth. This second edition is brought fully up to date with recent scholarship, and the scope of the book is broadened to include many more examples from mainland Europe. The new edition features fully revised sections on famine, war, and plague, as well as a new epitaph. The book draws some bold new conclusions and raises important questions, which will be fascinating reading for all students and general readers with an interest in medieval history.

This handbook gives a detailed explanation of the WHO/UNICEF guidelines for the integrated management of childhood illness (IMCI). The guidelines set out simple and effective methods for the prevention and management of the leading causes of serious illness and mortality in young children. They promote evidence-based assessment and treatment using a syndromic approach that supports the rational, effective and affordable use of drugs. The handbook gives an overview of the IMCI process and includes technical guidelines to assess and classify a sick young infant aged from one week up to two months, and a sick young child aged two months to five years; as well as guidance on how to identify treatment; communicate and counsel; and give follow-up care.

The Manual focuses on the fieldside diagnosis and treatment of severe injuries and illnesses that can present at a sports event. It concentrates on basic diagnostic skills and treatment modalities as the sports physician has often limited diagnostic and treatment facilities available. Each chapter concentrates on an illness or anatomical injury and offers a structured diagnostic and therapeutic approach in this difficult pre-hospital environment. The chapters explain what problems are to be expected with specific conditions as well as which treatment plan should be implemented and how to evaluate and reassess those plans.

The WHO global health sector strategy on sexually transmitted infections, 2016-2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the

management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline - primary, secondary and tertiary health care.
