*The Cultural Experience has helped generations of undergraduates discover the excitement of ethnographic research through participation in relatively familiar cultures in North American society. Grounded in the interviewing-based ethnographic technique known as ethnosemantics, the latest edition continues to treat ethnography as a discovery process. Students are taught how to set up an ethnographic field study, choose a microculture, and find and approach an informant, as well as how to ask ethnographic questions, record data, and organize and analyze what they have learned. Detailed instruction on how to write an ethnography is also provided. The guidelines are followed by ten short but substantive, well-written student ethnographies on such microcultures as exotic dancing, firefighting, pest extermination, and the work of midwives and police detectives. The Second Edition of this popular classroom volume includes boxed inserts that offer suggestions to aid in the research process, material on how to use observation and narratives with the ethnosemantic approach, an emphasis on how to find cultural themes and adaptive challenges by analyzing ethnographic field data, and extensive strategies for writing the final ethnographic paper. It also presents a comprehensive treatment of ethical responsibilities as well as a discussion of the significance of ethnographic research and its applications in the workplace.*

"This edition of the U. S. Army War College guide to national security policy and strategy continues to reflect the structure and approach of the core national security strategy and curriculum at the War College. The fifth edition is published in two volumes that correspond roughly to the Department of National Security and Strategy's core courses: "Theory of strategy" and "National security policy and strategy." Like previous editions, this one is based on its predecessor, but contains both updates and new scholarship. Over a third of the chapters are new or have undergone significant rewrites. Many chapters, some of which appeared for years in this work, have been removed. Nevertheless, the book remains unchanged in its purpose. Although this is not primarily a textbook, it does reflect both the method and manner that the U.S. Army War College uses to teach strategy formulation to America's future leaders. The book is not a comprehensive or exhaustive treatment of either strategic theory or the policymaking process. Both volumes are organized to proceed from the general to the specific. Thus, the first volume opens with general thoughts on the nature and theory of war and strategy, proceeds to look at the complex aspect of power, and concludes with some theoretical issues. Similarly, the second volume begins by examining the policy/strategy process, moves to a look at the strategic environment, and concludes with some specific issues. This edition continues the effort begun in the 4th edition to include several short case studies to illustrate the primary material in the volume"--Introd.

The vast majority of intellectual, religious, and national developments in modern Judaism revolve around the central idea of "Jewish culture." This book is the first synoptic view of these developments that organizes and relates them from this vantage point. The first Jewish modernization movements perceived culture as the defining trait of the outside alien social environment to which Jewry had to adapt. To be "cultured" was to be modern-European, as opposed to medieval-ghetto-Jewish. In short order, however, the Jewish religious legacy was redefined retrospectively as a historical "culture," with fateful consequences for the conception of Judaism as a humanly- and not only divinely-mandated regime. The conception of Judaism took two main forms: an integrative, vernacular Jewish culture that developed in tandem with the integration of Jews into the various nations of western-central Europe and America, and a national Hebrew culture which, though open to the inputs of modern European society, sought to develop a revitalized Jewish national identity that ultimately found expression in the

***As the European Union faces the ongoing challenges of legitimacy, identity, and social cohesion, an understanding of the social purpose and direction of EU citizenship becomes increasingly vital. This book is the first of its kind to map the development of EU citizenship and its relation to various localities of EU governance. From a critical political economy perspective, the authors argue for an integrated analysis of EU citizenship, one that considers the interrelated processes of migration, economic transformation, and social change and the challenges they present.***

***Why should we study language? How do the ways in which we communicate define our identities? And how is this all changing in the digital world? This seventh edition carries on the legacy while addressing some of the newer pressing and exciting challenges of the 21st century, such as issues of language and power, language ideology, and linguistic diasporas. ***This book examines the treatment of culture and development in the discipline of economics, thereby filling a conspicuous gap in current literature. Economics has come a long way to join the 'cultural turn' that has swept the humanities and social sciences in the last half century. This volume identifies some of the issues that major philosophies of economics must address to better grasp the cultural complexity of contemporary economies. This book is an extensive survey of the place of culture and development in four theoretical economic perspectives—Neoclassical, Marxian, Institutional, and Feminist. Organized in nine chapters with three appendices and a compendium of over 50 interpretations of culture by economists, this book covers vast grounds from classical political economy to contemporary economic thought. The literatures reviewed include original and new institutionalism, cultural economics, postmodern Marxism, economic feminism, and the current culture and development discourse on subjects such as economic growth in East Asia, businesswomen entrepreneurs in West Africa, and comparative development in different parts of Europe. Zein-Elabdin carries the project further by borrowing some of the insights from postcolonial theory to call for a more profound rethinking of the place of culture and of currently devalued cultures in economic theory. This book is of great interest for those who study Economic development, International relations, feminist economics, and Economic geography***

In short, Culture in Minds and Societies: Foundations of Cultural Psychology presents a new look at the relationship between people and society, produces a semiotic theory of cultural psychology and provides a dynamic treatment of culture in human lives. This book makes a decisive break from the post-modernist theoretical framework that considers knowledge as local and situation-specific. It restores the goal of construction of general knowledge to the social sciences. While recognizing the uniqueness of all human personal experience from birth to death, it emphasizes the universality of cultural organization of human minds and societies.

Eisenstadt and Shachar provide new insights into the development of urban civilization. They use a comparative and historical approach to analyse early forms of urban development within preindustrial societies. After reviewing the existing theories of urbanization, the authors present a new macrosocietal and comparative theoretical approach. They analyse nine civilizations in the context of their political regimes, social processes, and cultures.

The thesis of this book is that only a social personalism and no form of impersonalism can adequately account for the solidarity and stability of what we individuals share with all other members of our society, our second nature. In the ancient world the discussion of society, at least since Plato and Aristotle, began with the social nature of individuals as found in families and proceeded to topics such as the formation and the well ordering of societies according to eternal principles grasped by reason. Since the beginning of the modern world, at least since Hobbes and Locke, the discussion of society began with the relation of persons and society and then moved on to other topics, usually political and legal ones. The central problem was to find the basis on which individuals formed societies and how they could do so. Buford's question is with a more basic issue: 'What do individuals and society share in common?' or what philosophers since Cicero have called our second nature, and how to best understand its unity and stability. The crisis of our culture in the erosion of both solidarity and stability pointedly manifests itself in our second nature. There the culture in which we live is felt, lived, and shared. Buford asks how we can lay bare our second nature, revealing the extent of the crisis. Our second nature is the form of social actions of persons in triadic relations, and Buford argues that it is there that we find that trust unifies a society and provides the basis for the institutions that stabilize it.

*Against the bleak backdrop of pressing issues in today's world, civil societies remain vibrant, animated by people's belief that they should and can solve such issues and build a better society. Their imagination of a good society, their understanding of their engagement, and the ways they choose to act constitute the cultural aspect of civil society. Central to this cultural aspect of civil society is the "culture of democracy," including normative values, individual interpretations, and interaction norms pertaining to features of a democratic society, such as civility, independence, and solidarity. The culture of democracy varies in different contexts and faces challenges, but it shapes civic actions, alters political and social processes, and thus is the soul of modern civil societies. The Culture of Democracy provides the first systematic survey of the cultural sociology of civil society and offers a committed global perspective. It shows that, as everyone is eager to have their voice heard, cultural sociology can serve as an "art of listening," a thoroughly empirical approach that takes ideas, meanings, and opinions seriously, for people to contemplate significant theoretical and public issues.*

Effective communication with the African society in the field of missions, church planting, and social development work has been and continues to be a great challenge, particularly to people from western cultural and language orientation. Africans are a we rather than I and a depended on rather than independent of society. The worldview of a traditional African in terms of society, relationships, and communication is communal. Certainly, the African perception of communalism affects how they communicate with the people of different cultural orientation. Africa has several cultures and people differ in their communication depending on their cultural orientation. However, there are universal African cultures that act as a framework for understanding key aspects of communication with Africans for successful missions, church planting, and social development work. This book, therefore, provides a strategy of understanding communication with the African society. The discussions in this book provide readers with different cultural orientations unique perception of the African society as s/he may be planning to communicate with the African society for missions, church planting, and social development work, even doing humanitarian ministry in African society. Although literacy levels have improved tremendously in most African countries, most of Africa is not a reading society. It is imperative to understand that most Africans still communicate orally and are not time conscious. Hence, effective communication in African societies ought to be based on storytelling rather than literature distribution, although this is in transition. In fact, Africans are oratory and good listeners. Thus, this book provides an understanding to people of different cultural orientations when they plan to communicate with the people in Africa.
