As technology becomes an ever-more prevalent part of everyday life, and population-based physical activity programs seek new ways to increase life-long engagement with physical activity, these two ideas have become increasingly linked. This Special Issue attempts to offer a thorough and critical examination of emerging technologies in physical activity and health promotion, considering technological interventions in different contexts (communities, clinics, schools, homes, etc.) among various populations, exploring the challenges of integrating technology into physical activity promotion, and offering solutions for its implementation. This Special Issue aims to take a broadly positive stance toward interactive technology initiatives and, while discussing some negative implications of an increased use of technology, offers practical recommendations for promoting physical activity through various emerging technologies, including, but not limited to: Active video games (exergaming); social media; mobile device apps; health wearables; mobile games, augmented reality games, global positioning and geographic information systems; and virtual reality. Offering a logical and clear critique of emerging technologies in physical activity and health promotion, this Special Issue will provide useful suggestions and practical implications for researchers, practitioners, and educators in the fields of public health, kinesiology, physical activity and health, and healthcare.

Focused on physical literacy and measurable outcomes, empowering physical educators to help students meet the Common Core standards, and coming from a recently renamed but longstanding organization intent on shaping a standard of excellence in physical education, National Standards & Grade-Level Outcomes for K-12 Physical Education is all that and much more. Created by SHAPE America — Society of Health and Physical Educators (formerly AAHPERD) — this text unveils the new National Standards for K-12 Physical Education. The standards and text have been retooled to support students' holistic development. This is the third iteration of the National Standards for K-12 Physical Education, and this latest version features two prominent changes: •The term physical literacy underpins the standards. It encompasses the three domains of physical education (psychomotor, cognitive, and affective) and considers not only physical competence and knowledge but also attitudes, motivation, and the social and psychological skills needed for participation. • Grade-level outcomes support the national physical education standards. These measurable outcomes are organized by level (elementary, middle, and high school) and by standard. They provide a bridge between the new standards and K-12 physical education curriculum development and make it easy for teachers to assess and track student progress across grades, resulting in physically literate students. In developing the grade-level outcomes, the authors focus on motor skill competency, student engagement and intrinsic motivation, instructional climate, gender differences, lifetime activity approach, and physical activity. All outcomes are written to align with the standards and with the intent of fostering lifelong physical activity. National Standards & Grade-Level Outcomes for K-12 Physical Education presents the standards and outcomes in ways that will help preservice teachers and current practitioners plan curricula, units, lessons, and tasks. The text also • empowers physical educators to help students meet the Common Core standards; • allows teachers to see the new standards and the scope and sequence for outcomes for all grade levels at a glance in a colorful, easy-to-read format; and • provides administrators, parents, and policy makers with a framework for understanding what students should know and be able to do as a result of their physical education instruction. The result is a text that teachers can confidently use in creating and enhancing high-quality programs that prepare students to be physically literate and active their whole lives.

Physical fitness affects our ability to function and be active. At poor levels, it is associated with such health outcomes as diabetes and cardiovascular disease. Physical fitness testing in American youth was established on a large scale in the 1950s with an early focus on performance-related fitness that gradually gave way to an emphasis on health-related fitness. Using appropriately selected measures to collected fitness data in youth will advance our understanding of how fitness among youth translates into better health. In Fitness Measures and Health Outcomes in Youth, the IOM assesses the relationship between youth fitness test items and health outcomes, recommends the best fitness test items, provides guidance for interpreting fitness scores, and provides an agenda for needed research. The report concludes that selected cardiorespiratory endurance, musculoskeletal fitness, and body composition measures should be in fitness surveys and in schools. Collecting fitness data nationally and in schools helps with setting and achieving fitness goals and priorities for public health at an individual and national level.

COMLEX Level 2-PE Review Guide is a comprehensive overview for osteopathic medical students preparing for the COMLEX Level 2-PE (Performance Evaluation) examination. COMLEX Level 2-PE Review Guide covers the components of History and Physical Examination found on the COMLEX Level 2-PE The components of history taking, expected problem specific physical exam based on the chief complaint, incorporation of osteopathic manipulation, instruction on how to develop a differential diagnosis, components of the therapeutic plan, components of the expected humanistic evaluation and documentation guidelines. The final chapter includes case examples providing practice scenarios that allow the students to practice the cases typically encountered on the COMLEX Level 2-PE These practice cases reduce the stress of the student by allowing them to experience the time constraints encountered during the COMLEX Level 2-PE. This text is a one-of-a-kind resource as the leading COMLEX Level 2-PE board review book. Offers practical suggestions and mnemonics to trigger student memory allowing for completeness of historical data collection. Provides a method of approach that reduces memorization but allows fluidity of the interview and exam process. Organizes the approach to patient interview and examination and provides structure to plan development. Describes the humanistic domain for student understanding of the areas being evaluated."

As educators and legislators across the country debate how to improve public schools, the most vital factor often disappears from the equation—the relationship between the teacher and the student. According to veteran educators Rita and Marco Portales, this relationship is the central issue in the education of students, especially Latino/a students who often face serious barriers to school success because of the legacy of racism, insufficient English-language skills, and cultural differences with the educational establishment. To break down these barriers and help Latino/a students acquire a quality education, the Portaleses focus attention on the teacher-student relationship and offer a proven method that teachers can use to strengthen the print and oral skills of their students. They begin by analyzing the reasons why schools too often fail to educate Latino/a students, using eloquent comments from young Latinos/as and their parents to confirm how important the teacher-student relationship is to the student's success. Then they show how all educational stakeholders—teachers, administrators, state education agencies, legislators, and parents—can work together to facilitate the teacher-student relationship and improve student education. By demonstrating how teachers can improve students' reading, critical thinking, writing, and oral communication skills across the curriculum, they argue that learning can be made more relevant for students, keeping their interest levels high while preparing them for academically competitive colleges.

"The Understanding by Design Guide to Creating High-Quality Units is targeted to individuals and groups interested in improving their skills in designing units of study based on the Understanding by Design (UbD) framework. This guide introduces UbD unit design and directs readers through the process. It is organized around a set of modules that move from basic ideas (e.g., the three stages of "backward design") to more complicated elements of unit design (e.g., authentic performance tasks)."—publisher website.

If you are looking for the definitive resource to help you measure your students' achievement, your search is over. PE Metrics: Assessing Student Performance Using the National Standards & Grade-Level Outcomes for K-12 Physical Education, Third Edition, aligns with SHAPE America's National Standards and Grade-Level Outcomes for K-12 Physical Education, was created by SHAPE America and its writing team, and was reviewed by researchers and teachers with expertise in assessment. The result is a text that you can use with confidence as you help develop physical literacy in your students. Written for physical educators, administrators, and curriculum writers (and for physical education majors and minors), this latest edition offers the following: • 130 ready-to-use assessments for kindergarten through grade 12 (65 elementary, 43 middle school, and 22 high school) • Worksheets, checklists, and rubrics that support the assessments • Guidance on creating your own assessments for any lesson or unit These assessments are aligned with the three SHAPE America lesson planning books for elementary, middle, and secondary school and dovetail with SHAPE America's The Essentials of Teaching Physical Education. The assessments can be used as they are, or you can modify them or use them as samples in creating assessments that are best suited to your needs. PE Metrics, now in a four-color design, is organized into four main parts: Part I introduces the purpose and uses of assessment, how to develop an assessment plan, and the various types of assessments and tools you can use. Part II contains sample assessments for students in grades K-5, focusing on fundamental motor skills; as such, the elementary-level assessments center heavily on Standard 1. In part III, the emphasis shifts to middle school assessments, with a concentration on Standard 2 and on the categories of dance and rhythms, invasion games, net/wall games, fielding/striking games, outdoor pursuits, aquatics, and individual-performance activities. Part IV offers sample assessments for high school students, with a priority on providing evidence of the knowledge and skills students will need to remain active and fit after they leave high school. This resource provides a comprehensive, performance-based assessment system that enables you to incorporate assessment into every facet of your teaching, create assessments that are unique to your program, and measure your students' performance against the grade-level outcomes. The assessments are process focused and are designed to measure multiple constructs as well as provide meaningful feedback to students—ultimately helping them to develop holistically across all three learning domains (psychomotor, cognitive, and affective). PE Metrics will help you instill in students the knowledge, skills, and confidence they need to enjoy a lifetime of healthful physical activity.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Study guide for students of the HSC 2 unit PD Health PE course. Takes account of the revised syllabus and final exam. Provides information and practical advice on the examinable parts of the subject. Covers first aid and sports injuries; two social health issues: HIV/AIDs and drug use; and the art and science of coaching. Includes HSC exam-style questions and model answers. The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

Summerford describes her innovative school physical fitness and health program called PE-4-Me Radical Wellness Program, implemented at her middle school in Apple Valley, California. The program combines movement, music, authentic assessment, thematic instruction, and brain-based learning into a physical education program. Several times the role of movement and health is emphasized as a way to help students become better learners in other areas. Summerford includes seat work and activity program sheets which support the program.

This book presents all the publicly available questions from the PISA surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment.

Taught well, Health and Physical Education can provide purposeful, stimulating and challenging learning experiences. It can help children to develop sophisticated understanding, skill and capabilities through their bodies and to see greater meaning in not only what they are learning but also their wider lives; and it can enrich all other aspects of the curriculum. This practical new text will help pre- and in-service teachers to develop and implement quality health and physical education experiences in primary schools. It introduces the general principles of teaching and learning in Health and Physical Education and explains why this learning area is an important part of the Australian Curriculum. Chapters then discuss considerations and practical implications for teaching both health and physical education using a strengths-based approach. Packed with evidence-based and research-informed content, this valuable text also includes numerous examples and activities that help you bridge the gap from theory to real-world practice. Above all, it will give educators the confidence to teach primary health and physical education so that every child benefits.

Millions of Americans use e-cigarettes. Despite their popularity, little is known about their health effects. Some suggest that e-cigarettes likely confer lower risk compared to combustible tobacco cigarettes, because they do not expose users to toxicants produced through combustion. Proponents of e-cigarette use also tout the potential benefits of e-cigarettes as devices that could help combustible tobacco cigarette smokers to quit and thereby reduce tobacco-related health risks. Others are concerned about the exposure to potentially toxic substances contained in e-cigarette emissions, especially in individuals who have never used tobacco products such as youth and young adults. Given their relatively recent introduction, there has been little time for a scientific body of evidence to develop on the health effects of e-cigarettes. Public Health Consequences of E-Cigarettes reviews and critically assesses the state of the emerging evidence about e-cigarettes and health. This report makes recommendations for the improvement of this research and highlights gaps that are a priority for future research.

Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€”which includes all primary caregiversâ€”are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
