Down-to-Earth Approach Adapted from Henslin's best-selling comprehensive text, *Core Concepts* provides in-depth coverage of ten high-priority topics that are the foundation of many introductory sociology courses. This unique paperback offers a concise and economical format without sacrificing depth of coverage. Unlike a “brief” or “essentials” text, the ten chapters that make up *Core Concepts* are not edited down from a longer book. Instead, they provide full coverage of those topics that instructors emphasize the most in a one-semester or one-term introductory sociology course. Like Henslin's other texts, it features the author's familiar “down-to-earth” approach and personal writing style that highlight the sociology of everyday life. With wit, personal reflection, and illuminating examples, Henslin shares with readers a passion for sociology unmatched by any other introductory text.

- * Encourages critical thinking: Provides various research strategies and illustrates concrete examples of the method being used to help students develop a more sophisticated epistemology.
- * Presents “The Social World Model” in each chapter: This visually-compelling organizing framework opens each chapter and helps students understand the interrelatedness of core concepts.
- New to the Third Edition:
 - * Thirty new boxed features, including the innovative 'Engaging Sociology' and 'Applied Sociologists at Work' features
 - * Three substantially reorganised chapters (2. Examining the Social World, 3. Society and Culture, and 13. Politics and Economics) * 315 entirely new references and 120 new photos.

Written especially for undergraduate students taking their first course in social statistics, this highly accessible bestselling text has been thoroughly revised and updated with the latest General Social Survey data. This new Fourth Edition maintains the same informal, conversational writing style along with the many pedagogical features have led to the previous editions' widespread success. It also introduces new social issues, including more analysis of cultural diversity. In this Fourth Edition, the authors have introduced a strong global perspective by using real-life examples from the International Social Survey Programme that help expand the students' analytical focus beyond the United States.

First published in 1994, this text is designed to be used by graduate-level social work students in courses on evaluation and program design. Over the course of 20 years and 6 editions, the goals of the book have remained the same: to prepare students to participate in evaluative activitieswithin their organizations; to prepare students to become critical producers and consumers of professional evaluative literature; and to prepare students for more advanced evaluation courses and texts. Grinnell, Gabor, and Unrau aim to meet these objectives by presenting a unique approach that isrealistic, practical, applied, and user-friendly. While a majority of textbooks focus on program-level evaluation, some recent books present case-level evaluation methods but rely on inferentially powerful -- but difficult-to-implement -- experimental baseline designs. This

text assumes that neitherof these approaches adequately reflects the realities of the field or the needs of students and beginning practitioners. Instead, Program Evaluation for Social Workers offers a blend of the two that demonstrates how they can complement one another. The integration of case-level and program-levelapproaches provides an accessible, adaptable, and realistic framework for students to more easily grasp and implement in the real-world.

“Simultaneous invention” has become commonplace in the natural sciences, but is still virtually unknown within the sphere of social science. The convergence of two highly compatible versions of Critical Realism from two independent sources is a striking exception. Pierpaolo Donati's Relational Sociology develops ‘upwards’ from sociology into a Realist meta-theory, unlike Roy Bhaskar's philosophy of science that works ‘downwards’ and ‘underlabours’ for the social sciences. This book systematically introduces Donati's Relational Sociology to an English readership for the first time since he began to advance his approach thirty years ago. In this eagerly awaited book, Pierpaolo Donati shifts the focus of sociological theory onto the relational order at all levels. He argues that society is constituted by the relations people create with one another, their emergent properties and powers, and internal and external causal effects. Relational Sociology provides a distinctive variant upon the Realist theoretical conspectus, especially because of its ability to account for social integration. It will stimulate debate amongst realists themselves and, of

course, with the adversaries of realism. It is a valuable new resource for students of social theory and practising social theorists.

Adapted from David M. Newman's best-selling *Sociology: Exploring the Architecture of Everyday Life*, this briefer, streamlined version continues to show students how to see the “unfamiliar in the familiar,” inspiring them to think critically about their own lives and social contexts. As in the full text, the author's approachable writing style and lively personal anecdotes make the Brief Edition a text that “reads like a real book.” It uses the metaphors of “architecture” and “construction” to help students understand that society is not something that exists “out there,” independently of themselves; it is a human creation that is planned, formed, maintained, or altered by individuals.

Rather than surveying every subfield in sociology, the Brief Edition focuses on the individual and society, the construction of self and society, the construction of inequality in the context of social structures.
