This book provides two thousand multiple choice questions on human anatomy and physiology, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an introduction to set the scene for the questions to come. However not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in examinations for undergraduate introductory courses and as such reflect the focus of these particular courses and are pitched at the level to challenge students that are beginning their training in anatomy and physiology. The questions and answer combinations are to be used both by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition & dietetics, health sciences and students taking an anatomy and physiology course as an elective.

The ultimate aim of any teaching system is to produce the best scholars & the best professionals in the today's scenario with futuristic approach so that when given a chance they must be able to exhibit their past knowledge. To verify or quantify this knowledge the student/scholar has to undergo certain exam. Nowadays the best exams are supposed to be those having Multiple Choice Questions i.e. MCQ's as integral part because of two important reasons, First easy to conduct & uniform evaluation for all students, that is no bias, Second MCQ's checks memory/recall memory/ reasoning & ability to be precise in terms of reading /understanding and speed with ability to record answers with accuracy too. The book on this subject "Exam Success Review ANATOMY MCQ's- Volume-4, Embryology & Histology for Medical Students - MBBS 1st Prof & PG Entrance" will be helpful as a companion for fast revision during examination and will help them certainly to secure full marks in the Multiple Choice Questions in examination. I must let you know that MCQ's make about 20% to 40% of total marks in the 1st prof. MBBS exam and anybody who knows the concepts and art to answer the MCQ's is going to be winner not only at MBBS level but also at various Postgraduate entrance Examinations at national & state level to get the PG Course of their choices.

The question style and standard are at the level of the FRCPath Pt 1 examination.

The compartmentation of genetic information is a fundamental feature of the eukaryotic cell. The metabolic capacity of a eukaryotic (plant) cell and the steps leading to it are overwhelmingly an endeavour of a joint genetic cooperation between nucleus/cytosol, plastids, and mitochondria. Alter ation of the genetic material in anyone of these compartments or exchange of organelles between species can seriously affect harmoniously balanced growth of an organism. Although the biological significance of this genetic design has been vividly evident since the discovery of non-Mendelian inheritance by Baur and Correns at the beginning of this century, and became indisputable in principle after Renner's work on interspecific nuclear/plastid hybrids (summarized in his classical article in 1934), studies on the genetics of organelles have long suffered from the lack of respectabil ity. Non-Mendelian inheritance was considered a research sideline~ifnot a freak~by most geneticists, which becomes evident when one consults common textbooks. For instance, these have usually impeccable accounts of photosynthetic and respiratory energy conversion in chloroplasts and mitochondria, of metabolism and global circulation of the biological key elements C, N, and S, as well as of the organization, maintenance, and function of nuclear genetic information. In contrast, the heredity and molecular biology of organelles are generally treated as an adjunct, and neither goes as far as

Lippincott's Illustrated Q&A Review of Histology is a resource for students engaged in histology course review and test preparation for the USMLE Step 1 and COMLEX. It contains more than 1,000 USMLE-style and content recall questions with images for approximately 40% of the questions.

Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma – epidemiology, diagnosis, mechanisms, treatment and management – but has a particular focus on recent understanding of mechanistic heterogeneity based on an analytic approach using various –omics platforms applied to clinically well-defined asthma cohorts. How these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.

This new edition offers up-to-date, clinically relevant board-style questions that are perfect for course review and board prep. Approximately 1,000 multiple-choice questions with detailed answer explanations cover frequently tested topics in general and systemic pathology.
