*This is a collection of 70 stories from the popular radio series, Stories from Texas, that runs on the Texas Standard Network of 32 NPR stations across Texas. This is the second book in the series and includes short, memorable stories, that are extensions of the radio stories. Some are inspirational and some are humorous. The book covers the exploits of classic Texans like Sam Houston and Jim Bowie and modern icons such as Barbara Jordan, Mary Kay Ash, and T. Boone Pickens. There are funny folklore tales and urban legends here. Readers may have their phobias spike on them when they are taken up the tallest towers in Texas and into the deepest underwater caves. All the favorite critters are here, too, the coral snake, the armadillo, the horny toad, and vultures. The book even takes a look at Texas outside of Texas, such as how Texas, Australia, got its name and the incredible Texas connection to the Royal Gorge Bridge in Colorado. There's something here for life-long native Texans, and, for the newcomer, too. For the newcomer or the person abroad longing to be a Texan. *this is an excellent primer on the culture of the Lone Star State.**

Biology of Ticks is the most comprehensive work on tick biology and tick-borne diseases. This second edition is a multi-authored work, featuring the research and analyses of renowned experts across the globe. Spanning two volumes, the book examines the systematics, biology, structure, ecological adaptations, evolution, genomics and the molecular processes that underpin the growth, development and survival of these important disease-transmitting parasites. Also discussed is the remarkable array of diseases transmitted (or caused) by ticks, as well as modern methods for their control. This book should serve as a modern reference for students, scientists, physicians, veterinarians and other specialists. Volume I covers the biology of the tick and features chapters on tick systematics, tick life cycles, external and internal anatomy, and others dedicated to specific organ systems, specifically, the tick integument, mouthparts and digestive system, salivary glands, waste removal, salivary glands, respiratory system, circulatory system and hemolymph, fat body, the nervous and sensory systems and reproductive systems. Volume II includes chapters on the ecology of non-nidicolous and nidicolous ticks, genetics and genomics (including the genome of the Lyme disease vector Ixodes scapularis) and immunity, including host immune responses to tick feeding and tick-host interactions, as well as the tick's innate immune system that prevents and/or controls microbial infections. Six chapters cover in depth the many diseases caused by the major tick-borne pathogens, including tick-borne protozoa, viruses, rickettsiae of all types, other types of bacteria (e.g., the Lyme disease agent) and diseases related to tick paralytic agents and toxins. The remaining chapters are devoted to tick control using vaccines, acaricides, repellents, biocontrol, and, finally, techniques for breeding ticks in order to develop tick colonies for scientific study.

Creative Thinking

Did you ever stop to think that the person who just walked by was someone you were supposed to meet? In this fast-paced world, we sometimes miss opportunities to become inspired by complete strangers, or even someone close to us. For years, Melissa "Missy" Hopely struggled with this idea because, although family and teammates always surrounded her, she felt completely alone in her battle with depression, obsessive-compulsive disorder, and bullying. Missy was diagnosed with OCD and depression as a teenager. Although she excelled as an athlete in sports like soccer and softball, Missy had a difficult time with normal social interactions and relationships. She struggled with a sometimes-crippling anxiety that made her stand out in a negative way to her peers, causing them to bully her at school. Persevering through years of hiding her true self, enduring her parents' difficult and painful divorce, and being abandoned by friends who couldn't cope with her differences, Missy started listening to others' stories. All of the people she had met throughout her lifetime. What she found out astonished her: Everyone has a story. Everyone feels insignificant at times. Everyone has challenges. Everyone will experience both bad and good. Everything we experience and go through is a part of us, but it doesn't have to define us. And, most important: Others have been where you are; you are not alone. This book tells not only Missy's story, but also the inspirational stories of courage and perseverance of people Missy has met "in real life." People like Carolyn, a high school student diagnosed with a cancerous brain tumor. Kimberly, a mom whose daughter's suicide made national television headlines. Lafayette, who has been HIV positive since birth. Jordan, who suffers from depression and bi-polar disorder and tried to take his own life by jumping out a ninth-story window. Ryan, a semi-professional boxer and college student who doesn't let his amputation slow him down. P-Track, who doesn't let his Asperger syndrome keep him from dancing. And, so many others. Missy's positive, encouraging message shines through these stories: If we take a second, we as individuals have the great power of uniting and working together to change other people's lives and our world for the better.

Can refocusing conversations between doctors and their patients lead to better health? Despite modern medicine's infatuation with high-tech gadgetry, the single most powerful diagnostic tool is the doctor-patient conversation, which can uncover the lion's share of illnesses. However, what patients say and what doctors hear are often two vastly different things. Patients, anxious to convey their symptoms, feel an urgency to "make their case" to their doctors. Doctors, under pressure to be efficient, multitask while patients speak and often miss the key elements. Add in stereotypes, unconscious bias, conflicting agendas, and fear of lawsuits and the risk of misdiagnosis and medical errors multiplies dangerously. Though the gulf between what patients say and what doctors hear is often wide, Dr. Danielle Ofri proves that it doesn't have to be. Through the powerfully resonant human stories that Dr. Ofri's writing is renowned for, she explores the high-stakes world of doctor-patient communication that we all must navigate. Reporting on the latest research studies and interviewing scholars, doctors, and patients, Dr. Ofri reveals how better communication can lead to better health for all of us.

Essential vocabulary is featured to help students build real-world literacy.

This book deals with the foundations for methods of teaching agriculture, applications of learning, the special needs of unique populations, and the procedures for evaluating teaching and learning. It is the only comprehensive exploration of the teacher preparation curriculum in agricultural education. This comprehensive survey provides clear explanations and examples of learning applications to provide an in-depth study of planning for successful teaching. Topics include decisions about teaching, planning, group teaching techniques, managing student behavior, teaching special populations, and evaluating learning. This book about professional development is a useful reference tool for university professors, teacher educators, and inservice program educators.

The Living Architecture Systems Group is an interdisciplinary partnership of academics, artists, designers, and industry partners dedicated to researching and developing next-generation architectural environments. Projects produced by this group are now showing qualities that come strikingly close to life. These experimental works can move, respond, explore, learn, and adapt.Open boundaries and expanded dimensions run throughout the studies, exploring the scales of new adaptive and responsive architecture, from intimate personal spaces to regional infrastructures. Dimensions at the edges of human perception, subtle phenomena, immersive sonic environments, and precise measurements using innovative software controls are included. Deep involvement in computation and material craft is offered, reflecting the unparalleled new abilities of designers to precisely addressing material performance. This White Papers 2019 volume offers readers a sense of the variety and depth of research that is being conducted by Living Architecture Systems Group.

Packed with resources to help parents make sense of the college application process, conduct a college search, and help guide their child's completion of their college application. The author has included a variety of tools to compare one school to another, keep track of important application deadlines, and track possible scholarship aid. Readers from around the world have praised its value to parents who want to make sense of the college gauntlet without hovering and taking control away from their children. One reviewer has written: Stuart White's new book takes a unique focus on the role of the parent of one of the hundreds of thousands of overachieving high schoolers. Whereas most books are written for parents that micro manage and compel their children into the high achiever stereotype, Prof. White's book centers on a rather beautiful love story between him and his daughter as she went through the college admission process.Another reader has written: Thank you for sharing your helpful guide to the college application process. I have read many articles and listened to many podcasts regarding the process, yet still learned more from your book¿ I appreciated your openness and candidness regarding helicopter parenting. I think it's important to include that advice in this book, as most people reading a book like this will lean toward the helicopter side of parenting. The author's side by side journey with his daughter ended with her admission to Yale University.

Medical Law and Ethics covers the core legal principles, key cases, and statutes that govern medical law alongside the key ethical debates and dilemmas that exist in the field. Carefully constructed features highlight these debates, drawing out the European angles, religious beliefs, and feminist perspectives which influence legal regulations. Other features such as 'a shock to the system', 'public opinion' and 'reality check' introduce further socio-legal discussion and contribute to the lively and engaging manner in which the subject is approached. Online resources This book is accompanied by the following online resources: - Complete bibliography and list of further reading - Links to the key cases mentioned in the book - A video from the author which introduces the book and sets the scene for your studies - Links to key sites with information on medical law and ethics - Answer guidance to one question per chapter

This second of two volumes discusses subfamily proteins which function in molecular and vesicular transport mechanisms inside the cell. In this volume the focus lies on the Rab, Ran and Arf subfamily members. As in Volume 1, the book is written by international renowned scientists in the field of small G-proteins. In elaborate reviews, biochemistry, structure, function and G-protein - effector interactions are described. Together with Volume 1 this book provides an comprehensive state-of-the-art work on small G-proteins (GTPases). It is written for Graduates and Professors in Biochemistry and Cell Biology interested in the mechanism and function of small G-proteins but are extremely valuable for those who want to move into the field.

This book offers a broad collection of the principles of statistics and probability in a nice, compact format for the middle school and early high school student. Interesting text and background bring the principles to life. The topics are often enriched by references to famous mathematicians who discovered these principles and also snapshots of these principles at work in our real world. Seldom does a math book bring together the story of so many of these topics in such an accessible and readable text.

The DISCOVER Stories Project is an anthology of life stories written by Lewis University faculty and staff exploring how each discovered and responded to their unique calling. The Stories Project is part of the DISCOVER Initiative, a University-wide program designed to support the exploration of vocation and calling in the undergraduate student experience.

“Biodiversity” refers to the variety of life. It is now agreed that there is a “biodiversity crisis”, corresponding to extinction rates of species that may be 1000 times what is thought to be “normal”. Biodiversity science has a higher profile than ever, with the new Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services involving more than 120 countries and 1000s of scientists. At the same time, the discipline is re-evaluating its foundations - including its philosophy and even core definitions. The value of biodiversity is being debated. In this context, the tree of life (“phylogeny”) is emerging as an important way to look at biodiversity, with relevance cutting across current areas of concern - from the question of resilience within ecosystems, to conservation priorities for globally threatened species - while capturing the values of biodiversity that have been hard to quantify, including resilience and maintaining options for future generations. This increased appreciation of the importance of conserving “phylogenetic diversity”, from microbial communities in the human gut to global threatened species, has inevitably resulted in an explosion of new indices, methods, and case studies. This book recognizes and responds to the timely opportunity for synthesis and sharing experiences in practical applications. The book recognizes that the challenge of finding a synthesis, and building shared concepts and a shared toolbox, requires both an appreciation of the past and a look into the future. Thus, the book is organized as a flow from history, concepts and philosophy, through to methods and tools, and followed by selected case studies. A positive vision and plan of action emerges from these chapters, that includes coping with inevitable uncertainties, effectively communicating the importance of this “evolutionary heritage” to the public and to policy-makers, and ultimately contributing to biodiversity conservation policy from local to global scales.

Why isn’t everyone creative? Why doesn’t education foster more ingenuity? Why is expertise often the enemy of innovation? Bestselling creativity expert Michael Michalko shows that in every field of endeavor — from business and science to government, the arts, and even day-to-day life — natural creativity is limited by the prejudices of logic and the structures of accepted categories and concepts. Through step-by-step exercises, illustrated strategies, and inspiring real-world examples, he shows readers how to liberate their thinking and literally expand their imaginations by learning to synthesize dissimilar subjects, think paradoxically, and enlist the help of the subconscious mind. He also reveals the attitudes and approaches that diverse geniuses share — and anyone can emulate. Fascinating and fun, Michalko’s strategies facilitate the kind of lightbulb-moment thinking that changes lives — for the better.

An innovation in learning improves upon the implementation of the standard practice or introduces a new practice, thus achieving greater learning outcomes. The Handbook on Innovations in Learning, developed by the Center on Innovations in Learning, presents commissioned chapters describing current best practices of instruction before embarking on descriptions of selected innovative practices which promise better methods of engaging and teaching students. Written by a diverse and talented field of experts, chapters in the Handbook seek to facilitate the adoption of the innovative practices they describe by suggesting implementation policies and procedures to leaders of state and local education agencies.
