Junkyard Valuation: Salvage Industry Appraisal Principles Applicable to Highway Beautification

This third edition has been written to thoroughly update the coverage of injection molding in the World of Plastics. There have been changes, including extensive additions, to over 50% of the content of the second edition. Many examples are provided of processing different plastics and relating the results to critCal factors, which range from product design to meeting performance requirements to reducing costs to zero-defect targets. Changes have not been made that concern what is basic to injection molding. However, more basic information has been added concerning present and future developments, resulting in the book being more useful for a long time to come. Detailed explanations and interpretation of individual subjects (more than 1500) are provided, using a total of 914 figures and 209 tables. Throughout the book there is extensive information on problems and solutions as well as extensive cross referencing on its many different subjects. This book represents the ENCYCLOPEDIA on IM, as is evident from its extensive and detailed text that follows from its lengthy Table of CONTENTS and INDEX with over 5200 entries. The worldwide industry encompasses many hundreds of useful plastic-related computer programs. This book lists these programs (ranging from operational training to product design to molding to marketing) and explains them briefly, but no program or series of programs can provide the details obtained and the extent of information contained in this single sourcebook.

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

John Greene (1597-1659) emigrated in 1635 from England to Salem, Massachusetts, moved to Providence, Rhode Island in 1636 with Roger Williams, and married twice (once in England). Descendants lived in New England, Ohio, Illinois, Georgia and elsewhere. Includes ancestors in England to the early 1200s.

This is a compelling behind-the-scenes account of the extraordinary Castro brothers and the dynastic succession of Fidel's younger brother Raul. Brian Latell, the CIA analyst who has followed Castro since the sixties, gives an unprecedented view into Fidel and Raul's remarkable relationship, revealing how they have collaborated in policy making, divided responsibilities, and resolved disagreements for more than forty years--a challenge to the notion that Fidel always acts alone. Latell has had more access to the brothers than anyone else in this country, and his briefs to the CIA informed much of U.S. policy.

Based on his knowledge of Raul Castro, Latell makes projections on what kind of leader Raul will be and how the shift in power might influence U.S.-Cuban relations.

Over the past ten years, object-oriented technology has started to have a significant impact in industry. Despite its many positive aspects, there have been some problems in successfully applying the technology to large projects, and in achieving adequate levels of flexibility and software reuse. Based on the research of the Object Systems Group in Geneva, this book looks at a range of issues, from programming languages and systems through to tools, frameworks and methods. KEY FEATURES: Chapters are self-contained, with the development of ideas moving from programming language design issues to environments and applications. Aware of recent trends, the book examines the development of multimedia systems as an application domain. Up-to-date information on the activities of the Object Systems Group. The authors can be found on the World Wide Web.

Men in the Middle

This volume studies local priests as central players in small communities of early medieval Europe. As clerics living among the laity, priests played a double role within their communities: that of local representatives of the Church and religious experts, and that of owners of land and other goods. By virtue of their membership of both the ecclesiastical and the secular world, they can be considered as ' men in the middle ': people who brought politico-religious ideas and ideals to secular communities, and who linked the local to the supra-local via networks of landownership. This book addresses both roles that local priests played by approaching them via their manuscripts, and via the charters that record transactions in which they were involved. Manuscripts once owned by local priests bear witness to their education and expertise, but also indicate how, for instance, ideals of the Carolingian reforms reached the lowest levels of early medieval society. The case-studies of collections of charters, on the other hand, show priests as active members of networks of the locally powerful in a variety of European regions. Notwithstanding many local variations, the contributions to this volume show that local priests as ' men in the middle ' are a phenomenon shared by the early medieval world as a whole.

In this groundbreaking book, Elizabeth Perle McKenna challenges the outdated system of work for professional women, and encourages readers to re-examine work as their sole identities, and, if they are unhappy, to allow room for their Lives. For every worn-out, emotionally depleted female professional who has ever sighed, "there has got to be a better way," here is the revolutionary book by Elizabeth Perle McKenna--herself a former publishing executive--that explores women's relationship with work. For decades, women have succeeded at traditional male jobs, but now, deep in the second stage of the feminist movement, they want lives that are integrated and whole. Based on original research and containing hundreds of interviews with prominent working women, this book exposes the inherent conflict between the way work traditionally is structured and rewarded, and what women desire and value in their lives. More important, it suggests new ways for women to identify their values, reclaim their identities, and define success on their own terms. Most importantly, this is not just another book about working mothers. Liz Perle McKenna deconstructs the myth that women can have it all, and shows that they risk true happiness until they give up that impossible ideal. The author's focus extends to every working woman who will most likely face a life-altering situation at some point in her career and will need to redefine what success means to her. Any woman who has been working for more than a few years will identify strongly with the issues raised here, and will be rewarded by the insights she gleans from this vital book.

Goat science covers quite a wide range and varieties of topics, from genetics and breeding, via nutrition, production systems, reproduction, milk and meat production, animal health and parasitism, etc., up to the effects of goat products on human health. In this book, several parts of them are presented within 18 different chapters. Molecular genetics and genetic improvement of goats are the new approaches of goat development. Several factors affect the passage rate of digesta in goats, but for diet properties, goats are similar to other ruminants. Iodine deficiency in goats could be dangerous. Assisted reproduction techniques have similar importance in goats like in other ruminants. Milk and meat production traits of goats are almost equally important and have significant positive impacts on human health. Many factors affect the health of goats, heat stress being of increasing importance. Production systems could modify all of the abovementioned characteristics of goats.

The Fortean Research Center was founded in Lincoln, Nebraska in 1982. During the two decades of its existence, this volunteer group of researchers and investigators delved deep into the unexplained. Exploring events in Nebraska - and far beyond -that included ghosts, UFOs, Bigfoot encounters, animal mutilations, government cover-ups, alleged alien abductions, psychic phenomena, cult activity, and even a sighting of a blob-like mystery creature the Fortean Research Center became recognized among members of the Fortean, paranormal, and UFO research communities around the world, as a reliable and trusted source of information. Here is the entire collection of the Journal of the Fortean Research Center, 23 issues in all. These publications are a reflection of their time, and demonstrate in many cases the beginning steps into subjects familiar to the public today: alleged UFO crashes and landings at government installations, alien abductions, cryptozoology and more.

The Highway Beautification Act of 1965 provides for effective control of visible junkyard areas by screening or by removal, relocation, or disposal of all such facilities within 1,000 feet of the right-of-way of interstate and primary system highways, if they are in unzoned areas. The amount of compensation paid is determined through an examination of the principles, concepts and alternative methods of estimating value of salvage operations. Examples of approaches to valuation are hypothesized to present an overview of possible conditions that will confront the appraiser or right-of-way personnel.

The name of Pont-Aven, a Breton village in France, is synonymous with a major school of painting in modern art and automatically associated with Paul Gauguin and Émile Bernard. In 1888, the two painters established a completely new style: Synthetism. Breaking with academic orthodoxy and heavily influenced by Japanese prints, they introduced novel aesthetic principles. In this superbly illustrated and insightful book, works from the collection of Alexandre Mouradian reveal the international scope of what was a haven for those artists--including Maurice Denis, Eric Forbes-Robertson, Henry Moret--who wanted "to dare" like Gauguin.

Examines both mined and synthetic diamonds and diamond films. The text offers coverage on the use of diamond as an engineering material, integrating original research on the science, technology and applications of diamond. It discusses the use of chemical vapour deposition grown diamonds in electronics, cutting tools, wear resistant coatings, thermal management, optics and acoustics, as well as in new products.

More Food: Road to Survival is a comprehensive analysis of agricultural improvements which can be achieved through scientific methods. This reference book gives information about strategies for increasing plant productivity, comparisons of agricultural models, the role of epigenetic events on crop production, yield enhancing physiological events (photosynthesis, germination, seedling emergence, seed properties, etc.), tools enabling efficient exploration of genetic variability, domestication of new species, the detection or induction of drought resistance and apomixes and plant breeding enhancement (through molecularly assisted breeding, genetic engineering, genome editing and next generation sequencing). The book concludes with a case study for the improvement of small grain cereals. Readers will gain an understanding of the biotechnological tools and concepts central to sustainable agriculture *More Food: Road to Survival is, therefore, an ideal reference for agriculture students and researchers as well as professionals involved sustainability studies.*

This book gives the novice background information necessary to feel confident in selecting, working with, and advocating for manga and anime collections; and it offers more experienced librarians some fresh insights and ideas for programming and collections. In 2003 the manga (Japanese comics) market was the fastest growing area of pop culture, with 75-100% growth to an estimated market size of \$100 million retail. The growth has continued with a 40-50% sales increase in bookstores in recent years. Teens especially love this highly visual, emotionally charged and action-packed media imported from Japan, and its sister media, anime (Japanese animation); and libraries have begun purchasing both. Chock full of checklists and sidebars highlighting key points, this book includes: a brief history of anime and manga in Japan and in the West; a guide to visual styles and cues; a discussion of common themes and genres unique to manga and anime; their intended audiences; cultural differences in format and content; multicultural trends that manga and anime readers embrace and represent; and programming and event ideas. It also includes genre breakdowns and annotated lists of recommended titles, with a focus on the best titles in print and readily available, particularly those appropriate to preteen and teen readers. Classic and benchmark titles are also mentioned as appropriate. A glossary and a list of frequently asked questions complete the volume.
