When it comes to evolution, most people are thumbs up, thumbs down, or even thumbs sideways. No matter where your thumb is pointing, you must ask the question: what is evolution? The U.S. Court System has witnessed seemingly

Conservation of resources jumps to mind. We need to conserve resources in order that economic activities may continue. Alas, this is a false start. Resources are always defined by a given economic system, and only it determines what is and what is not a resource. Therefore, conserving

start, therefore, at a more basic level. This level, some may argue, is addressed by ensuring for human beings "clean genes. "

Again, this is a mistaken beginning. It is thoroughly mistaken- for reasons of science.

It is a false start because

malfunctioning organs and morphological

structures are not only due to deleterious hereditary factors but particularly due to unfavorable environments during early growth and development.

Moreover, eugenics is not acceptable to any but a small fraction of society. Eugenics may not be irrelevant to our future, but is
