

## ***How To See Color And Paint It By Arthur Stern***

Colors are everywhere in the world around us. Read this book to learn about colors in the world. Do you see colors around you, too? This book has been translated into Spanish and allows for a wonderful shared reading experience for children who are beginning readers and is an excellent tool for building the confidence new readers need to embark on the adventures that await them while reading! This Lap Book is the perfect size to use for read-alouds, partner reading, and small group instruction.

From New York Times best-selling author of the Dinotopia series, James Gurney, comes a carefully crafted and researched study on color and light in paintings. This art instruction book will accompany the acclaimed *Imaginative Realism: How to Paint What Doesn't Exist*. James Gurney, New York Times best-selling author and artist of the Dinotopia series, follows *Imaginative Realism* with his second art-instruction book, *Color and Light: A Guide for the Realist Painter*. A researched study on two of art's most fundamental themes, *Color and Light* bridges the gap between abstract theory and practical knowledge. Beginning with a survey of underappreciated masters who perfected the use of color and light, the book examines how light reveals form, the properties of color and pigments, and the wide variety of atmospheric effects. Gurney cuts through the confusing and contradictory dogma about color, testing it in the light of science and observation. A glossary, pigment index, and bibliography complete what will ultimately become an indispensable tool for any artist. This book is the second in a series based on his blog, [gurneyjourney.com](http://gurneyjourney.com). His first in the series, *Imaginative Realism*, was widely acclaimed in the fantastical art world, and was ranked the #1 Bestseller on the Amazon list for art instruction. "James Gurney's new book, *Color and Light*, cleverly bridges the gap between artistic observation and scientific explanation. Not only does he eloquently describe all the effects of color and light an artist might encounter, but he thrills us with his striking paintings in the process." --Armand Cabrera, Artist "Transracial adoption is never oversimplified, airbrushed, or sentimentalized, but instead, it's portrayed with bracing honesty as the messy institution it is: rearranging families, blending cultural and biological DNA, loss and joy. An exceptionally accomplished debut." – Kirkus, starred review For as long as she can remember, sixteen-year-old Alex Kirtridge has known two things about herself: She's a stellar baseball player. She's adopted. Alex has had a comfortable childhood in Madison, Wisconsin. Despite some teasing, being a biracial girl in a wealthy white family hasn't been that big a deal. What mattered was that she was a star on the diamond, where her father, a former Major Leaguer, coached her hard and counted on her to make him proud. But now, things are changing: she meets Reggie, the first black guy who's wanted to get to know her; she discovers the letters from her biological father that her adoptive parents have kept from her; and her changing body starts to affect her game. Suddenly, Alex begins to question who she really is. She's always dreamed of playing pro baseball just like her father, but can she really do it? Does she truly fit in with her white family? Who were her biological parents? What does it mean to be black? If she's going to find answers, Alex has to come to terms with her adoption, her race, and the dreams she thought would always guide her. • Winner of the Minnesota Book Award • A Kirkus Reviews Best Teen book of the Year • A Bank Street College Best Children's Book of the Year

**THE SUNDAY TIMES BESTSELLER** 'A mind-expanding tour of the world without leaving your paintbox. Every colour has a story, and here are some of the most alluring, alarming, and thought-provoking. Very hard painting the hallway magnolia after this inspiring primer.' Simon Garfield *The Secret Lives of Colour* tells the unusual stories of the 75 most fascinating shades, dyes and hues. From blonde to ginger, the brown that changed the way battles were fought to the white that protected against the plague, Picasso's blue period to the charcoal on the cave walls at Lascaux, acid yellow to kelly green, and from scarlet women to imperial purple, these surprising stories run like a bright thread throughout history. In this book Kassia St Clair has turned her lifelong obsession with colours and where they come from (whether Van Gogh's chrome yellow sunflowers or punk's fluorescent pink) into a unique study of human civilisation. Across fashion and politics, art and war, *The Secret Lives of Colour* tell the vivid story of our culture.

**Based on decades of research and refinement, the art in this high-contrast board book is completely mesmerizing for newborns—helping them to focus. Babies as young as six weeks old can appreciate the bold shapes and colors in BABY LOOKS! and will benefit from hearing a parent's voice, and the bonding that naturally occurs when a loving adult reads to a baby. Receptive language skills develop right from the start, as babies soak in everything they hear, and eventually learn to associate particular sounds with familiar people and things. Hundreds of thousands of parents in Japan have already discovered the power of this little book, and now American parents can too!**

**A colors book with no colors ? instead, die-cuts to peek through and find them yourself This introduction to colors integrates the reader's surroundings into carefully considered die-cut silhouettes, providing children the space to visually experiment. Readers will gaze around the room through a rooster-shaped hole in search of something red, through a sun-shaped hole for something yellow, through squiggly worms for something pink. Designed for the youngest readers, this sturdy board book features 12 die-cuts made to flip and carry on a color-seeking mission. Inspired by the Whitney Museum's approach to looking at art, these books provide a new way to look at the world.**

Identifying, Understanding and Reducing Our Hidden Racism: A White Perspective

From Genes to Perception

Every new parent purchases at least one high-contrast board book, and this one, with its bold, more abstract art, stands out from the crowd. Featuring graphic images that are perfect for infants, parents and babies will love exploring this book together. Infants can distinguish the colors black and white because of their high contrast. But what is the next color infants see? Red! The images in this book have been created based on decades of research and refinement and are accompanied by bouncy, rhyming text.

Color Vision, first published in 2000, defines the state of knowledge about all aspects of human and primate color vision.

Who is white, and why should we care? There was a time when the immigrants of New York City's Lower East Side—the Irish, the Poles, the Italians, the Russian Jews—were not white, but now “they” are. There was a time when the French-speaking working classes of Quebec were told to “speak white,” that is, to speak English. Whiteness is an allegorical category before it is demographic. This volume gathers together some of the most influential scholars of privilege and marginalization in philosophy, sociology, economics, psychology, literature, and history to examine the idea of whiteness. Drawing from their diverse racial backgrounds and national origins, these scholars weave their theoretical insights into essays critically informed by personal narrative. This approach, known as “braided narrative,” animates the work of award-winning author Eula Biss. Moved by Biss's fresh and incisive analysis, the editors have assembled some of the most creative voices in this dialogue, coming together across the disciplines. Along with the editors, the contributors are Eduardo Bonilla-Silva, Nyla R. Branscombe, Drucilla Cornell, Lewis R. Gordon, Paget Henry, Ernest-Marie Mbonda, Peggy McIntosh, Mark Morris, Marilyn Nissim-Sabat, Victor Ray, Lilia Moritz Schwarcz, Louise Seamster, Tracie L. Stewart, George Yancy, and Heidi A. Zetzer.

Racism is still very prevalent and pervasive in all aspects of the P-12 educational experience in the United States. Far too many teachers and administrators continue to respond to this challenge by applying colorblind perspectives and approaches. This edited volume provides a broad and comprehensive critique of colorblindness in various educational contexts. In an attempt to advocate for a more color-conscious approach to education, this book deals with a wide range of issues related to teaching, learning, curriculum, creativity, assessment, discipline, implicit bias, and teacher education. There are three distinct features that make this book so important and relevant given the current social and racial climate in U.S. schools today. First, each chapter in this book draws from a plethora of different theoretical perspectives related to race and racism. In this sense, readers are equipped with variety of robust theoretical perspectives to better understand this complicated issue of racism in schools.

Second, this book communicates issues of race and racism through multiple voices. Unlike other books on race and racism where the central voice is that of a researcher or scholar, this book centralizes the voices and perspectives of researchers, teachers, and teacher educators alike. As a result, readers are better able to understand issues of race and racism in schools from a more nuanced perspective. Finally, unlike other books related to race and racism in schools, this book provides readers with practical strategies for combating racism in their respective educational contexts.

*"I See Color" is a book that deals directly with the issue of race relations between Blacks and whites. It chronicles the white author's journey to educating himself on the issue of race through personal relationships, experiences and studies. It provides a blueprint needed for America to reach its final goal of equality between the races. It details common issues with white liberal thinking and provides both analysis and solutions to reduce the hidden, and often unconscious, racism therein. As America continues to struggle with the issue of race, "I See Color" builds a bridge for white people to cross to help end this struggle. The book engages white readers on a personal, not scholarly or theoretical, level. It is a must read for white people who are sincere in their desire to improve race relations in this country.*

*New readers will love the simple rhyme and bright images in this book that explores basic colors and encourages a shared reading experience. Millions of people have learned to draw using the methods of Dr. Betty Edwards's bestseller *The New Drawing on the Right Side of the Brain*. Now, much as artists progress from drawing to painting, Edwards moves from black-and-white into color. This much-awaited new guide distills the enormous existing knowledge about color theory into a practical method of working with color to produce harmonious combinations. Using techniques tested and honed in her five-day intensive color workshops, Edwards provides a basic understanding of how to see color, how to use it, and—for those involved in art, painting, or design—how to mix and combine hues. Including more than 125 color images and exercises that move from simple to challenging, this volume explains how to: see what is really there rather than what you "know" in your mind about colored objects; perceive how light affects color, and how colors affect one another; manipulate hue, value, and intensity of color and transform colors into their opposites; balance color in still-life, landscape, figure, and portrait painting; understand the psychology of color; harmonize color in your surroundings. While we recognize and treasure the beautiful use of color, reproducing what we see can be a challenge. Accessibly unweaving color's complexity, this must-have primer is destined to be an instant classic.

Learn to see and mix any color with extraordinary precision! Many painters don't paint what they see, but what they expect to see, what they think they see, what they remember, or what they imagine things are supposed to look like. Since "the mind stands in the way of the eye," the purpose of this revolutionary book is to train you to paint what your eye actually sees. Arthur Stern claims that color is key to painting what you see. After working with three generations of students, he developed a program of 22 painting projects that teach the artist to observe, identify, mix, match, and paint the colors of the world with remarkable accuracy. Using a painting knife and oil paint, you learn to analyze every painting subject as a series of distinct color areas—called color spots—and place each spot on the canvas as a unique and vivid mixture. The fundamental lesson of the book is that if you put the right color spot in the right place, you create a realistic image of form, space, surface texture, atmosphere, light, and shade. As you follow the painting projects in this book, you'll make the dramatic discovery that everything in nature is filled with luminous color. You'll learn to see glowing color in the "blackest" shadow and the "whitest" linen. You'll learn when a green can appear red; how to use paint to replicate metal, glass, wood, paper, porcelain, and other opaque, transparent, or textured surfaces. Before long, you'll be seeing a multitude of colors in a slice of bread, apples and oranges, and a mass of green leaves. You'll learn how to paint quickly enough to capture a "live" still life—a flower that moves and slowly dies as you paint it. You'll even practice with a setup outdoors to see how sunlight and skylight affect color. *How to See Color and Paint It* is a must for beginners and a valuable asset for intermediate artists who want to develop a more subtle perception of color. A final section contains beautiful paintings of many subjects that have grown out of projects and ideas taught in this book. 130 color plates; 40 black & white illustrations
