Few corporate initiatives of the last ten years have been more influential in the development of a learning culture at work than the corporate learning centre. The first edition of Sam Malone's book quickly established itself as the definitive concise guide to best practice. The second edition reflects the lessons learned since that time, along with the developments in learning technology. Setting up and sustaining a successful centre involves strategic skills such as planning and championing; technical skills, including budgeting, marketing and evaluation; and the people skills of communicating, influencing and managing change. There are chapters in the book for all the stakeholders involved, including the learners themselves. How to Set Up and Manage a Corporate Learning Centre offers definitive advice on all of these areas. Sam Malone demystifies what is a difficult, expensive and long term project for any organization.

This is a groundbreaking guide to creating an effective family budget. The pages within will provide any family with the tools and motivation to get out of debt and stay out of debt!

A concise introduction to key computing skills for biologists

While biological data continues to grow exponentially in size and quality, many of today's biologists are not trained adequately in the computing skills necessary for leveraging this information deluge. In *Computing Skills for Biologists*, Stefano Allesina and Madlen Wilmes present a valuable toolbox for the effective analysis of biological data. Based on the authors' experiences teaching scientific computing at the University of Chicago, this textbook emphasizes the automation of repetitive tasks and the construction of pipelines for data organization, analysis, visualization, and publication. Stressing practice rather than theory, the book's examples and exercises are drawn from actual biological data and solve cogent problems spanning the entire breadth of biological disciplines, including ecology, genetics, microbiology, and molecular biology. Beginners will benefit from the many examples explained step-by-step, while more seasoned researchers will learn how to combine tools to make biological data analysis robust and reproducible. The book uses free software and code that can be run on any platform. *Computing Skills for Biologists* is ideal for

scientists wanting to improve their technical skills and instructors looking to teach the main computing tools essential for biology research in the twenty-first century. Excellent resource for acquiring comprehensive computing skills Both novice and experienced scientists will increase efficiency by building automated and reproducible pipelines for biological data analysis Code examples based on published data spanning the breadth of biological disciplines Detailed solutions provided for exercises in each chapter Extensive companion website "The norms and expectations of father involvement have changed rapidly within one to two generations. Socially and economically marginalized fathers are being exposed to these messages through popular culture and the media, in state welfare, child protection, prisons, and probation offices, as well as in child support and family courts. Moreover, they are being told that it is up to them to make better choices, to get themselves together, and to be involved fathers. Based on life history interviews with 138 low-income fathers, Black and Keyes show that fathers have internalized these messages and sound determined. After all, there is social worth in fatherhood, hope for creating meaningful lives or new beginnings, the fantasy of leaving something of value behind in the world, and a stake in resisting stigmatizing labels like the deadbeat dad. Most will, however, fall short for several reasons: first, while the expectations for father involvement were increasing, state and economic support for low income families was decreasing; second, vulnerable fathers often lack viable models to guide them; third, living in dangerous neighborhoods

compromises fatherhood and leaves fathers at odds with dominant institutional narratives about being nurturing fathers, and fourth, the dark side of poverty, inscribed on bodies and minds, leaves some struggling with childhood traumas and unhealthy routines to mitigate or numb these painful developmental disruptions. Consequently, the authors assert that without transformative economic, political and social change that would facilitate and support engaged and nurturing fatherhood, these fathers are being "set-up."--

The pitch went like this: Chris Butler, a retired cop, ran a private investigator firm in Concord, California. His business had a fascinating angle—his firm was staffed entirely by soccer moms. In fact, Butler employed PI Super Moms: attractive, organized, smart, and trained in investigative techniques, self-defense, and weaponry. This American Life host Ira Glass described them as “MILF: Charlie's Angels.” When this story came across Pete Crooks's desk when he was working at Diablo magazine in 2010, he was instantly hooked. He'd heard a little bit about Butler and his super moms in the news; they'd been featured in People magazine and on Dr. Phil. What Butler's publicist was offering was too tantalizing to pass up: an opportunity to ride along with Butler and a few of his sexy PIs as they prepared to start filming a reality TV show. But after the ride-along—and after he started receiving mysterious emails from one of Butler's employees—Crooks started to realize something didn't seem right. After doing a little digging, he discovered the “sting” he'd seen only had one real victim...him. The PI bust had been a setup. Crooks wasn't a hardboiled crime reporter. He did lifestyle pieces for a regional magazine. The more he learned about Butler's operation, the more he realized he was in far over his head. But swallowing his fears, he decided he was going to write an expose on Butler and his entire organization. He soon found himself deep in the underbelly of fake sting operations, wannabe celebrities, police corruption, drug-dealing, reality television, double-crossing employees, and more twists and turns than a dozen

crime thrillers.

For beginning aquatic fancier looking to start out right with fish, *Freshwater Aquariums* by David Alderton is the ideal primer. A vertebrate that breathe primarily by means of gills and swim by means of fins is the author's lead-in to the first chapter called "What are Fish?"

Alderton builds the reader's confidence by providing solid information about what fish are anatomically speaking, how they evolved, how they breathe, how they move, where they live, and how they behave. The new fancier's aquarium begins in chapter two with instructions on setting up the tank, including selecting the right size, figuring out how many fish, setting the tank, equipment, substrate, heating, lighting, filtrations, plants, water chemistry, assembly, and more. Choosing the freshwater fishes that appeal to the reader is the subject of "Introducing the Categories of Fish," which schools readers in seven categories: Cyprinids (e.g., goldfish, minnows, and barbs), Characins (e.g., tetras), Cichlids (e.g., oscars, angelfish, and discus), Anabantoids (gouramis, bettas/Siamese fighting fish, and paradise fish), Toothcarps (guppies, swordtails, platies, black mollies, and killifish), Catfish, and others (loaches and Chinese algae eaters). The purchasing, maintenance, and feeding of fish are described in considerable details, and the author gives a basic overview of breeding and keeping fish healthy as well. Resources, glossary, and index conclude the book.

The first day she was sitting by herself - I felt sorry for her. After all, it couldn't be easy wrangling all the testosterone at Wingmen Inc as one of the only female

office managers. The second day she literally counted her carrots during break - she had seven by the way, right along with seven sips of her drink in between taking seven tiny little bites of the first carrot. Now I'm not one to brag, or maybe I am, but math and science fascinate me, so do problems. And this woman screamed puzzle from the way she ducked her head every time anyone looked at her, to the way she counted food and tapped the table when she didn't think anyone was watching. I'd like to think I took pity on her that day when, in fact, she was the one that took pity on me and asked if I needed a friend. She assumed I had a learning disability since I'd been staring so damn hard. Things would have ended there, except, my bosses need someone to test the new Wingmen App and since I was the only single guy on the floor - I was nominated, right along with the only single woman, the same one who thinks I need to use my fingers to count. Apparently rumors of my sexcapades throughout college reached even her ears, because she wants nothing to do with me, which makes beta testing a bitch. I have thirty days to win her over and prove myself to my bosses. One thing's for certain, I'm going to have to buy a hell of a lot of carrots.

Ryann is thrilled when her friend Stuart asks her to help him plan his last-minute wedding. He moved across the country over a year ago, and she misses him like crazy. As an executive with event planning experience, Ryann's the best person to help him fulfill his wildest wedding dreams. However, things in Colorado are not what she expects, especially Maddie, the maid of honor for the other groom. Maddie is attractive, and while she's certainly Ryann's type, she has some different ideas about the wedding. things professional. With just two weeks to the big event on Valentine's Day, can Ryann help Stuart to wedded bliss, and avoid his well-intentioned attempts to set her up with Maddie?
