Collaborative Statistics is intended for introductory statistics courses being taken by students at two- and four-year colleges who are majoring in fields other than math or engineering. Intermediate algebra is the only prerequisite. The book focuses on applications of statistical knowledge rather than the theory behind it. Barbara Illowsky and Susan Dean are professors of mathematics and statistics at De Anza College in Cupertino, CA. They present nationally on integrating technology, distance learning, collaborative learning, and multiculturalism into the elementary statistics classroom.

A revealing look at work environments that lead to greater loyalty and an increase in productivity Exploring the premise that the best way to attract and retain people, and their knowledge, will come from designing environments that turn today's increasingly virtual workplace into an attractive place for people to spend their time, Management by Design: Applying Design Principles to the Work Experience shows how the principles of design can be successfully applies to the work experience, making it a rewarding and productive. Reveals why the application of design to the workplace experience can improve the employee/employer relationship Why increased morale and employee loyalty start with a great work environment Explains why it is more important than ever to manage work experiences, especially with the projected work shortages in the coming decades Other titles by Rasmus: Listening to the Future: Why It's Everybody's Business This innovative book helps managers and executives connect the dots between employee retention, positive brand expression, and lasting stories that reflect well on an organization. "...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad - the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday.

No man nor no woman could eat it like Nolan. The way he twirled his tongue, and slurped, sucked and hummed... there was no people or devices that could do what he'd done. He was the highest paid male escort in the game, with the most talent, highest skill level, and the most seductive mentality. His only problem was... He's in love. The lady he wants is in the same profession, and she doesn't want to settle down anytime soon. A sizzling must-read page-turner from National Award Winning Bestselling and extremely decorated author David Weaver. Guaranteed to drop your jaws page by page! Read the sample and see for yourself.

Younglings can draw, color, and create with all their favorite characters from the Marvel films. From Guardians of the Galaxy to Spider-Man, every page is packed with doodles. Readers can use their artistic powers to bring these sensational scenes to life!

The Best Tool of the Millennium The seeds of Rybczynski's elegant and illuminating new book were sown by The New York Times, whose editors asked him to write an essay identifying "the best tool of the millennium." The award-winning author of Home, A Clearing in the Distance, and Now I Sit Me Down, Rybczynski once built a house using only hand tools. His intimate knowledge of the toolbox -- both its contents and its history -- serves him beautifully on his quest. One Good Turn is a story starring Archimedes, who invented the water screw and introduced the helix, and Leonardo, who sketched a machine for carving wood screws. It is a story of mechanical discovery and genius that takes readers from ancient Greece to car design in the age of American industry. Rybczynski writes an ode to the screw, without which there would be no telescope, no microscope -- in short, no enlightenment science. One of our finest cultural and architectural historians, Rybczynski renders a graceful, original, and engaging portrait of the tool that changed the course of civilization.

Natalie Shapero spars with apathy, nihilism, and mortality, while engaging the rich territory of the 30s and new motherhood

Books like this contain what may be called the raw material of the art, the processes which the magician can employ at will in building up his larger experiments in magic, each of which should be a complete play in itself. Then, when the student has found out how tricks can be done, he would do well to turn his attention to Our Magic, by Mr. Maskelyne and his associate, Mr. David Devant. And from this logical treatise he can learn how experiments in magic ought to be composed. It is from this admirable discussion of the basic principles of modern magic that more than one of the points made in this paper have been borrowed. Mr. Devant calls attention to the fact that new tricks are common, new manipulative devices, new examples of dexterity and new applications of science, whereas new plots, new ideas for effective presentation, are rare. He describes a series of experiments of his own, some of which utilize again but in a novel manner devices long familiar, while others are new both in idea and in many of the subsidiary methods of execution. One of the most hackneyed and yet one of the most effective illusions in the repertory of the conjurer is that known as the Rising Cards. The performer brings forward a pack of cards, several of which are drawn by members of the audience and returned to the pack, whereupon at the command of the magician they rise out of the pack one after the other in the order in which they were drawn. In the oldest form in which this illusion is described in the books on the art, the pack is placed in a case supported by a rod standing on a base, and the secret of the trick lies on this rod and its base. The rod is really a hollow tube and the base is really an empty box. The tube is filled with sand, on the top of which rests a leaden weight, to which is attached a thread so arranged over and under certain cards as to cause the chosen cards to rise when it descends down the tube; and in putting the cards into the case the conjurer released a valve at the bottom of the tube, so that the sand might escape into the box, whereby the weight was lowered, the thread then doing its allotted work, and the cards ascending into view, no matter how far distant the performer might then be standing. It seems likely that the invention of this primitive apparatus may have been due to the fact that some eighteenth century conjurer happened to observe the sand running out of an hour-glass and set about to find some means whereby this escape of sand could be utilized in his art. The hollow rod, the escaping sand, and the descending weight have long since been discarded; but the illusion of the Rising Cards survives and is now performed in an unending variety of ways. The pack may be held in the hand of the performer, without the use of any case, or it may be placed in a glass goblet, or it may be tied together with a ribbon and thus suspended from cords that swing to and from almost over the heads of the spectators; and however they may be isolated the chosen cards rise obediently when they are bidden. The original effect subsists, even though the devices differ.... The Bookman: A Review of Books and Life, Volume 40

A practical guide to Dr. John Dee's angelic magic • Contains instructions for performing Enochian magic meditations • Examines John Dee's original diaries from the British Library Enochian magic is a powerful, ancient system for opening portals to heavenly realms and enabling the ascent to God. The basis for many of the modern systems of magic, including the Golden Dawn, Enochian magic is named after the biblical prophet Enoch, who received the same knowledge and wisdom that was later conveyed to the astrologer to the court of Queen Elizabeth I, Dr. John Dee, by angels in the 16th century. In The Lost Art of Enochian Magic John DeSalvo traces the history of magic--from the earliest civilizations of the Akadians and Egyptians through the Greco-Roman period and up to the present time--to reveal how magic has penetrated and influenced our religious beliefs and practices today. Through his unprecedented investigation into the angelic magic of Dr. John Dee, during which time he deciphered Dee's original phonetic notations in the margins of Dee's 16th-century diaries, DeSalvo learned to properly reproduce the "Enochian calls," which act like mantras in opening higher realms and invoking angels, key to this type of magical practice. DeSalvo shows how to use Enochian magic for personal spiritual development and also as protection from negative energies.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Design and develop sophisticated 2D games that are as much fun to make as they are to play. From particle effects and pathfinding to social integration and monetization, this complete tour of Apple's powerful suite of game technologies covers it all. Family development? No problem. Start with the basics and then layer in the complexity as you work your way through three exciting - and fully playable - games. In the end, you'll know everything you need to go off and create your own video game masterpiece for your phone or tablet. Discover the power of Apple Game Frameworks, Xcode, and Swift by building three exciting games: Gloop Drop - a new twist on a classic arcade game, Val's Revenge - a roguelike dungeon crawler, and Hog - a social player vs. player mobile dice game. With Apple's SpriteKit you can create high-performance, power-efficient games that work across all Apple platforms, including iOS, macOS, tvOS, and watchOS. In this book, you'll discover how to... Design and develop rich 2D gaming experiences using Apple's built-in game framework, SpriteKit using Xcode and Swift to create engaging player experiences. Use the visual Scene Editor to build complete scenes. Unleash the power of the Particle Editor to create amazing effects. Use GameplayKit to add advanced features to your games like player intelligence, and complex rule systems. Build larger, more complex worlds with tile maps and Xcode's visual Tile Map editor. Bring people together using GameKit and Game Center, Apple's social gaming network. Increase revenue with third-party banner ads a Google AdMob (tm). Monetize your games with StoreKit and in-app purchases. So, grab your gear and get your game on - it's time to level up your skills. What You Need: macOS Mojave 10.14.6 or newer Xcode 11.3 or newer Basic knowledge of Swift 5.1.4 or newer

Offers a collection of true facts about animals, food, science, pop culture, outer space, geography, and weather.

First published in 2012. We have all felt the frustration of wasting time, paper and effort hen our prints or web images don't match the images we see on our monitors. Fortunately, you're holding the resource that will help solve these problems. This book covers the settings and software steps you'll need to post professional images and make stunning prints that showcase you artistic vision. In Color Management & Quality Outprint, Tom P. Ashe, a color expert and gifted teacher, shows you how to color manage your files through output, by clearly explaining how color works in our minds, on our monitors and computers and through our printers.

Elvis Cole finds himself deep in the bayou of Louisiana searching for the estranged parents of a television star -- but something deadlly is looking for him. L.A. private eye Elvis Cole is hired by popular television star Jodie Taylor to delve into her past and identify who gave her up for adoption thirty-six years before. Cole's assignment is to find out their biological history and report back. It seems a fairly too clear cut. But when he gets to Louisiana and begins his search, he finds that there's something much darker going on. He's looking for Taylor's parents, and some are ending up dead. And when Cole realizes that his employer knew more than she was telling, Voodoo River becomes a twisting tale of identity, secrets, and murder.

In this inspirational and humorous collection of essays, author John Dietsch sees his addiction to and passion for fishing as a parable that can help us shift from compulsive thinking to mindfulness and a closer connection to God. From creating fishing scenes on the set of A River Runs Through It in Montana, to directing fly fishing shows in New Zealand and from exploring deep canyons in California to guiding in Colorado, John shares his experiences and asks the question: what are we really fishing for? Through John's journeys across the globe, we discover that the same pursuit in fishing—of what is elusive but attainable—can be applied to our own spiritual journey. In the end, Dietsch uncovers his own truth under the rocks of a childhood river, recognizing the loss of both his brothers as the path of acceptance and faith that is graced by waters.

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Delphi Component Design tells the inside story of how and why Delphi was built, and how to make use of this information to build better Delphi components and applications. Whether you're a Delphi application writer yearning to expand into component writing, or an experienced Delphi component writer in pursuit of the smaller, faster, better Holy Grail, Delphi Component Design will help you sort out what Delphi Visual Component Library (VCL) services can do for you (and how they do it); what your components can do for VCL; what standard behaviors your component classes must implement; and how to take advantage of little-known VCL classes and services to dramatically improve your component's ease of use, code reuse, flexibility, and performance. This is the no-stone-turned authority on building advanced Delphi components - from high-level views of how a component fits into the grand scheme of things to the minute details of how each link between a component and the rest of the system works; from design-time support tools to run-time performance optimizations.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. The book is an easy-to-follow guide with clear instructions on various mobile forensic techniques. The chapters and the topics within are structured for a smooth learning curve, which will swiftly empower you to master mobile forensics. If you are a budding forensic analyst, consultant, engineer, or a forensic professional wanting to expand your skillset, this is the book for you. The book will also be beneficial to those with an interest in mobile forensics or wanting to find data lost on mobile devices. It will be helpful to be familiar with forensics in general but no prior experience is required to follow this book.

Appropriate for all courses in Decision Support Systems (DSS), computerised decision making tools, and management support systems. Decision Support and Business Intelligence Systems provides the only comprehensive, up-to-date guide to today's revolutionary management support system technologies, and showcases how they can be used for better decision-making. The 10th edition focuses on Business Intelligence (BI) and analytics for enterprise decision support in a more streamlined book. In addition to traditional decision support applications, this edition expands the reader's understanding of the various types of analytics by providing examples, products, services, and exercises by discussing Web-related issues throughout the text.

A Biocultural Approach

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

After 28 Years of Researching, Family History and Genealogy, and much prompting from a number of people, I'm writing this Genealogical Book, "Growing Your Family Tree - Sorting the Wheat from the Chaff". It will be of particular interest to those with Ancestry in Nova Scotia, and Atlantic Canada, but the scope of the book does go beyond those areas, and I hope You enjoy it and it helps You with Your Family History and Growing Your Family Tree. ~ Brian W. Hurlburt"Brian has sorted the wheat from the chaff in this most informative book on 'Growing Your Family Tree'. Beginning and Seasoned genealogists alike, will find it an essential, informative read!" By Dianne Perrin B.Ed.

Ferrari Fever is a fascinating and nostalgic look back at the classic car collecting scene in the 60's and 70's, an era when some of the rarest and most interesting Italian automobiles could still be found hidden or languishing in barns, junkyards or by the side of the road..almost lost in time. Paul Schouwenburg s story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars -from the early 60s onwards, he begins to uncover several rare Alfas, from 1900CSS Zagato to Tipo 33/2, in addition to a host of very special Ferraris, including a 250GTO, 340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn t exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box, Paul s passion and incredible drive make for exciting reading. Indeed this is a unique take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn t even give away his 250 GTO at the time!

This book comprises the proceedings of the second International Conference, AsiaHaptics 2016, held in Kashiwanoha, Japan. The book treats the state of the art of the diverse haptics (touch)-related research, including scientific research of haptics perception and illusion, development of haptics devices, and applications to a wide variety of fields such as education, medicine, telecommunication, navigation, and entertainment. This work helps not only active haptic researchers, but also general readers to understand what is going on in this interdisciplinary area of science and technology.
