ZOOLOGY COLORING BOO

Human Brain Coloring Book For Kids Ages 4-8

This artist designed coloring book features 25 fanciful brain designs. Anyone with a brain will enjoy it. Makes a great gift for neuroscientists, neurologists, neurosurgeons, therapists,

Read Book Human Brain Coloring Book

psychologists, psychiatrists, mindfulness practitioners and meditators, students and teachers. Those who have had a brain illness or injury, and their caregivers, have also found inspiration in these coloring pages. Let your imagination run wild while you color the designs in this book and use the 3 blank brains at the back to create your own fanciful design. An extra half inch margin at the binding leaves you enough room to cut out a finished brain and each design is sized for a standard 8x10 inch frame. Use colored pencils or markers. You'll want to stick a piece of blank paper behind a page before using markers in case of bleed through to protect the design behind it. About the artist: Laura Bundesen lives in western Massachusetts. She has been making artwork since the 1980's and creating neuroscience themed artwork since 2014, working primarily as a mixed media artist using fabric, thread and paint to explore the magical human brain. Most of her pieces feature a large dose of hand embroidery, an art practice that she finds both soothing and meditative, much like coloring. Visit her website at LauraBundenen.com to find out more about her work.

Reinforce your knowledge of neuroanatomy, neuroscience, and common pathologies of the nervous system with this active and engaging learn and review tool! Netter's Neuroscience Coloring

Read Book Human Brain Coloring Book

Book by Drs. David L. Felten and Mary Summo Maida, challenges you to a better understanding of the brain, spinal cord, and peripheral nervous system using visual and tactile learning. It's a fun and interactive way to trace pathways and tracts, as well as reinforce spatial, functional, and clinical concepts in this fascinating field. More than "just" a coloring book, this unique learning tool offers: More than 100 key topics in neuroscience and neuroanatomy, using bold, clear drawings based on classic Netter art. Clinical Notes that bridge basic science with health care and medicine. Workbook review questions, and bulleted lists throughout to reinforce comprehension and retention. Expert Consult eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, and references from the book on a variety of devices.

A captivating new thriller in the Wakeland detective series that explores the depths of Vancouver's criminal underworld. Caught between the grimy and glittering sides of Vancouver's streets, private investigator Dave Wakeland tries to keep his head down at the elite security firm he owns with partner Jeff Chen. But when masked men and women storm an ordinary-looking office building in Chinatown, leaving a trail of carnage, Wakeland finds himself caught up in a mystery that won't let him go, as hard as he tries to elude it. The police have a vested interest in finding the shooters, and so does the leader of the Exiles motorcycle gang. Both want Wakeland's help. The deeper he investigates, the

more connections he uncovers: to a reclusive millionaire with ties to organized crime, an international security company with a sinister reputation, and a high-ranking police officer who seems to have a personal connection to the case. When the shooters themselves start turning up dead, Wakeland realizes the only way to guarantee his own safety, and that of the people he loves, is by finding out who hired the shooters and why. What Wakeland uncovers are secrets no one wants known—a botched undercover operation, an ambitious gangster and a double-crossing killer who used the shooting to cover up another crime. With a setup like this, anything can go wrong, and does. Skill and luck are needed for Wakeland and Chen to emerge with the killers, the money and their own lives.

Neuroanatomy Coloring Book

How does the brain control the rest of the body? How does it enable the senses, regulate speech, affect balance, and influence sleep and dreams? These 30 full-page illustrations to color help explain every aspect of the brain's big job, from communicating with the central nervous system to retaining memories.

Here's the most entertaining way for children to get a good look at the human body and learn how bodies work: 28 fun and instructive, ready-to-color illustrations.

Coordinating text explores the muscular, skeletal, nervous, digestive, respiratory, and immune systems, and answers such questions as What is a hiccup? and Where is my DNA?

For high school biology students and college zoology students, as well as for all students of nature, this coloring book teaches the structure and function of the major animal groups, from simple to complex. Brief, informative texts accompany each drawing.

Readers experience for themselves how the coloring of a carefully designed picture almost magically creates understanding. Indispensable for every biology student.

Thousands of people inquire about and buy a competitor

to this book each year. Unique layout compared to the competition! Text is on the left page with illustration on facing page. A cover flap can cover the illustration's labels for easy self-testing. Up-to-date information covers the latest findings. Available now!

Acknowledging the difficulty many readers have when first attempting to learn about the brain's psychological functions, the authors of A Colorful Introduction to the Human Brain have created a book that makes the fascinating world of brain psychology research accessible to readers with little or no background in neuroscience. Readers learn the material in several steps. First they read through the introduction and definitions on the left page; then they color the illustration on the facing page; and finally they use the special cover flap to conceal the illustration labels while checking their knowledge, until they feel they have completely learned the material. Review exercises at the end of each chapter provide an opportunity for self-assessment, with answers provided at the end of the book. John Pinel, a professor of biopsychology at the University of British Columbia, is an award-winning teacher and the author of over 200 scientific articles. However, he is best known for his reader-oriented writing. His clear concise introductions to behavioral neuroscience have inspired, enthralled, and amused a generation of students and lay people.

This science ebook of award-winning print edition uses the latest findings from neuroscience research and brain-

imaging technology to take you on a journey into the human brain. CGI artworks and brain MRI scans reveal the brain's anatomy in unprecedented detail. Step-by-step sequences unravel and simplify the complex processes of brain function, such as how nerves transmit signals, how memories are laid down and recalled, and how we register emotions. The book answers fundamental and compelling questions about the brain: what does it mean to be conscious, what happens when we're asleep, and are the brains of men and women different? Written by award-winning author Rita Carter, this is an accessible and authoritative reference book to a fascinating part of the human body. Thanks to improvements in scanning technology, our understanding of the brain is changing fast. Now in its third edition, the Brain Book provides an up-to-date guide to one of science's most exciting frontiers. With its coverage of over 50 brain-related diseases and disorders - from strokes to brain tumours and schizophrenia - it is also an essential manual for students and healthcare professionals.

The complexity of the brain, the house of human consciousness, is so great that

Read Book Human Brain Coloring Book

scientists are still mystified as to how it works. For a student, learning the various cellular organizations, cranial nerves, and neural connections can be an intimidating challenge. The Human Brain Coloring Workbook is a break-through approach to understanding the brain's organization and functions. It features 125 striking, computer-generated illustrations that will help students gain a clear and enduring comprehension of this highly intricate structure. Learning interactively through coloring thoroughly fixes concepts in the mind and takes less time than memorizing from textbooks. The ideas behind each lesson are amply explained, and more complex subjects are approached through the gradual introduction of simple drawings. After completing the lessons in this book, not only will you understand the brain's basic configurations and functions, you will also have a fully colored and labeled resource ready for review whenever you need to brush up. This book is an invaluable and lasting resource for students in a number of disciplines, including medicine, anatomy and physiology, biology, psychology, nursing, rehabilitation, health administration, medical technology, and nutrition. The 125 plates in the book are organized in the following
