This year socioeconomic status & health was selected as the subject of the chartbook, which includes sections on the population, children’s health, & adults’ health. The sections on health include subsections on health status, risk factors, & health care access & utilization. The chartbook is followed by 149 detailed tables organized around 4 major subject areas: health status & determinants, utilization of health resources, health care resources, & health care expenditures. The tables report data for selected years to highlight major trends in health statistics.

Melanie Likos had lived a big life. Travelling the world cooking for the upper class on luxury yachts, waiting tables in the ski fields of France and falling foul of a ghost who haunted her on Chinese ship, her adventures were in themselves worthy of a book. On return home, she took a job as a tour guide in the Kimberly’s and found love in a handsome cowboy. That love quickly turned sour, and the harrowing journey they took across Australia demonstrates how easily a strong and independent woman can fall captive to a violent man. At a time when a woman dies every week at the hands of her male partner, it makes for horrifying and yet absolutely necessary reading.Her story of survival would in itself be remarkable, if it wasn’t for what came next. Weeks after escaping him, her friends coax her out of the house for a day out on the Murray River. Those first few tentative steps she takes towards reclaiming her sense of security, personal safety and liberty, are stolen from her in one devastating hour. On one of the blackest days in Australian history, Mel finds herself again fighting for her life. Still Breathing is the gripping story of a young woman who has not once, not twice, but repeatedly fought for her very breath - and yet done so with a dry wit and an unshakeable sense of her own sense of self, and all that she has to live for.

The American Anti-Vivisection Society (AAVS) petitioned the National Institutes of Health (NIH) on April 23, 1997, to prohibit the use of animals in the production of mAb. On September 18, 1997, NIH declined to prohibit the use of mice in mAb production, stating that "the ascites method of mAb production is scientifically appropriate for some research projects and cannot be replaced." On March 26, 1998, AAVS submitted a second petition, stating that "NIH failed to provide valid scientific reasons for not supporting a proposed ban." The office of the NIH director asked the National Research Council to conduct a study of methods of producing mAb. In response to that request, the Research Council appointed the Committee on Methods of Producing Monoclonal Antibodies, to act on behalf of the Institute for Laboratory Animal Research of the Commission on Life Sciences, to conduct the study. The 11 expert members of the committee had extensive experience in biomedical research, laboratory animal medicine, animal welfare, pain research, and patient advocacy (Appendix B). The committee was asked to determine whether there was a scientific necessity for the mouse ascites method; if so, whether the method caused pain or distress; and, if so, what could be done to minimize the pain or distress. The committee was also asked to comment on available in vitro methods; to suggest what acceptable scientific rationale, if any, there was for using the mouse ascites method; and to identify regulatory requirements for the continued use of the mouse ascites method. The committee held an open data-gathering meeting during which its members summarized data bearing on those questions. A 1-day workshop (Appendix A) was attended by 34 participants, 14 of whom made formal presentations. A second meeting was held to finalize the report. The present report was written on the basis of information in the literature and information presented at the meeting and the workshop.

This book is different than many Arduino books in that it expects no previous knowledge in electronics or programming. Instead of going into depth teaching those topics, it teaches only enough so that you can make things.In this book, you will:* Use lights to quickly learn basic programming concepts* Make noise and music on a speaker* Make a digital thermometer* Add graphics to your thermometer to show a graph of recorded temperature* Play with sensors to detect light, magnets, and knocking* Make a rubber band gun that uses a joystick for panning, tilting, and firing* Be encouraged to go create your own projects!There are exercises after each chapter (with sample solutions) to help you make sure you understand the concepts.

This textbook provides an introduction to digital forensics, a rapidly evolving field for solving crimes. Beginning with the basic concepts of computer forensics, each of the book’s 21 chapters focuses on a particular forensic topic composed of two parts: background knowledge and hands-on experience through practice exercises. Each theoretical or background section concludes with a series of review questions, which are prepared to test students’ understanding of the materials, while the practice exercises are intended to afford students the opportunity to apply the concepts introduced in the section on background knowledge. This experience-oriented textbook is meant to assist students in gaining a better understanding of digital forensics through hands-on practice in collecting and preserving digital evidence by completing various exercises. With 20 student-directed, inquiry-based practice exercises, students will better understand digital forensic concepts and learn digital forensic investigation techniques. This textbook is intended for upper undergraduate and graduate-level students who are taking digital-forensic related courses or working in digital forensics research. It can also be used by digital forensics practitioners, IT security analysts, and security engineers working in the IT security industry, particular IT professionals responsible for digital investigation and incident handling or researchers working in these related fields as a reference book.

This book explores how dementia acts as an existential threat, both to people diagnosed with the condition, and to their carers. The authors highlight how dementia not only gradually erodes our most fundamental abilities, but that it does so at a time of life when the resources of individuals, couples, and families are already stretched. While over time many people who are living with dementia are able to adapt to their diagnosis and acknowledge its impact on them, for many others it remains too threatening and painful to do this. The book draws on examples from clinical practice and experimental studies to argue that a range of responses, such as searching for long-dead parents or clinging to previous identities, all represent ways in which people living with dementia attempt to protect themselves against the emotional impact of the condition. Finally, the authors set out new ways of intervening to boost psychological resources and thereby support people in facing the existential threat of dementia.

Accident investigation and risk assessment have for decades focused on the human factor, particularly ‘human error’. This bias towards performance failures leads to a neglect of normal performance. It assumes that failures and successes have different origins so there is little to be gained from studying them together. Erik Hollnagel believes this assumption is false and that safety cannot be attained only by eliminating risks and failures. The alternative is to understand why things go right and to amplify that. The ETTO Principle looks at the common trait of people at work to adjust what they do to match the conditions. It proposes that this efficiency-thoroughness trade-off (ETTO) is normal. While in some cases the adjustments may lead to adverse outcomes, these are due to the same processes that produce successes.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

In Designs for the Pluriverse Arturo Escobar presents a new vision of design theory and practice aimed at channeling design's world-making capacity toward ways of being and doing that are deeply attuned to justice and the Earth. Noting that most design—from consumer goods and digital technologies to built environments—currently serves capitalist ends, Escobar argues for the development of an “autonomous design” that eschews commercial and modernizing aims in favor of more collaborative and placed-based approaches. Such design attends to questions of environment, experience, and politics while focusing on the production of human experience based on the radical interdependence of all beings. Mapping autonomous design’s principles to the history of decolonial efforts of indigenous and Afro-descended people in Latin America, Escobar shows how refiguring current design practices could lead to the creation of more just and sustainable social orders.

This book considers all aspects of bioprospecting in 14 succinct chapters and a forward by David Hawksworth. The organisms addressed include plants, insects, fungi, bacteria and phages. Bioprospecting has never been more relevant and is of renewed interest, because of the extremely worrying rise in novel, resistant pathogenic microorganisms. The practices in place to control these infections. We need to look for new sources of drugs from the environment on a massive scale as drug discovery is "too important to fail". Furthermore, the field can add great value to ecosystems in terms of economics, while providing additional reasons for maintaining associated services, such as food provision, benign climate, effective nutrient cycling, and carbon sequestration. Climate change must be reduced in order to preserve relevant environments. Previous bioprospecting projects should be re-visited and established biodiversity centres have a major role. Many different ecosystems exist which contain unique organisms with the potential to supply novel antibiotics, enzymes, food, and cosmetics, or they may simply have aesthetic value. This book yet describes why natural products should be investigated over combinatorial chemistry. Personal experience of bioprospecting projects are given significance. Issues such as how to share the benefits equitably with local communities are described and why pharmaceutical companies can be reluctant to be involved. Legal issues are discussed. Finally, there has never been a need to preserve ecosystems, and from the emergence of resistant pathogenic microorganisms.

For Resilience Engineering, 'failure' is the result of the adaptations necessary to cope with the complexity of the real world, rather than a breakdown or malfunction. The performance of individuals and organizations must continually adjust to current conditions and, because resources and time are finite, such adjustments are always approximate. This definitive new book explores this groundbreaking new development in safety and risk management, where 'success' is based on the ability of organizations, groups and individuals to anticipate the changing shape of risk before failures and harm occur. Featuring contributions from many of the worlds leading figures in the fields of human factors and safety, Resilience Engineering provides thought-provoking insights into system safety as an aggregate of its various components, subsystems, software, organizations, human behaviours, and the way in which they interact. The book provides an introduction to Resilience Engineering of systems, covering both the theoretical and practical aspects. It is written for those responsible for system safety on managerial or operational levels alike, including safety managers and engineers (line and maintenance), security experts, risk and safety consultants, human factors professionals and accident investigators.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
