*"If Mr. and Mrs. Smith had kids and wrote a parenting book, this is what you'd get: a practical guide for how to utilize key spy tactics to teach kids important life skills—from self-defense to effective communication to conflict resolution." —Working Mother Christina was a single, successful CIA analyst with a burgeoning career in espionage when she met fellow spy, Ryan, a hotshot field operative who turned her world upside down. They fell in love, married, and soon they were raising three children from his first marriage, and later, two more of their own. Christina knew right away that there was something special about the way Ryan was parenting his kids, although she had to admit their obsession with surviving end-of-world scenarios and their ability to do everything from archery to motorcycle riding initially gave her pause. More than that, Ryan's kids were much more security savvy than most adults she knew. She soon realized he was using his CIA training and field experience in his day-to-day child-rearing. And why shouldn't he? The CIA trains its employees to be equipped to deal with just about anything. Shouldn't parents strive to do the same for their kids? As Christina grew into her new role as a stepmom and later gave birth to their two children, she got on board with Ryan's unique parenting style—and even helped shape it using her own experiences at the CIA. Told through honest and relatable parenting anecdotes, Christina shares their distinctive approach to raising confident, security-conscious, resilient children, giving practical takeaways*

*Set on the eve of the First World War, across oceans and continents, steamliners and cross-country trains, David Downing 's complex and thrilling new espionage novel takes us all the way back to the dawn of that most fascinating of 20th century characters—the spy. It is 1913, and those who follow the news closely can see the world is teetering on the brink of war. Jack McColl, a Scottish car salesman with an uncanny ear for languages, has always hoped to make a job for himself as a spy. As his sales calls take him from city to great city—Hong Kong to Shanghai to San Francisco to New York—he moonlights collecting intelligence for His Majesty's Secret Service, but British espionage is in its infancy and Jack has nothing but a shoestring budget and the very tenuous protection of a boss in far-away London. He knows, though, that a geopolitical catastrophe is brewing, and now is both the moment to prove himself and the moment his country needs him most. Unfortunately, this is also the moment he begins to realize what his aspiration might cost him. He understands his life is at stake when activities in China suddenly escalate from innocent data-gathering and casual strolls along German military concessions to arrest warrants and knife attacks. Meanwhile, a sharp, vicious American suffragette journalist has wiled her way deep into his affections, and it is not long before he realizes that her Irish-American family might be embroiled in the Irish Republican movement Jack's bosses are fighting against. How can he choose between his country and the woman he loves? And would he even be able to make such a choice without losing both?*

*What better way to learn about letters than through play! This book kills two birds with one stone, teaching him his ABCs and getting him interested in cars. Can you spy the part of the car beginning with C? what about the one that begins with E? For many children, practicing the ability to recognize sounds in words can make a big difference in how fast they learn to read. In each puzzle spell the letter and find the item that matches that letter, then turn the page and see whether you've chosen correctly! A fun book for Future Car Drivers!*

*The inside story of the groundbreaking experiment that captured what people think about the life-and-death dilemmas posed by driverless cars. Human drivers don't find themselves facing such moral dilemmas as "should I sacrifice myself by driving off a cliff if that could save the life of a little girl on the road?" Human brains aren't fast enough to make that kind of calculation; the car is over the cliff in a nanosecond. A self-driving car, on the other hand, can compute fast enough to make such a decision—to do whatever humans have programmed it to do. But what should that be? This book investigates how moral va driverless cars to decide matters of life and death. In The Car That Knew Too Much, psychologist Jean-François Bonnefroid reports on a groundbreaking experiment that captured what people think cars should do in situations where not everyone can be saved. Sacrifice the passengers for pedestrians? Save children rather than adults? Kill one person so many can live! Bonnefroid and his collaborators Iyad Rahwan and Azim Shariff designed the largest experiment in moral psychology ever: the Moral Machine, an interactive website that has allowed people—eventually, millions of them, from 233 countries and territories—to make choices within detailed accident scenarios. Bonnefroid discusses the responses (reporting, among other things, that babies, children, and pregnant women were most likely to be saved), the media frenzy over news of the experiment, and scholarly responses to it. Boosters for driverless cars argue that they will be in fewer accidents than human-driven cars. It's up to humans to decide how many fatal accidents we will allow these cars to have.*

*NATIONAL BESTSELLER - A Washington Post Notable Book of the Year - Drawing on previously classified CIA documents and on interviews with firsthand participants, The Billion Dollar Spy is a brilliant feat of reporting and a riveting true story of intrigue in the final years of the Cold War. It was the height of the Cold War, and a dangerous time to be stationed in the Soviet Union. One evening, while the chief of the CIA's Moscow station was filling his gas tank, a stranger approached and dropped a note into the car. The chief, suspicious of a KGB trap, ignored the overture. But the man had made up his mind. His attempts to establish contact with the CIA would be rebuffed four times before he thrust upon them an envelope whose contents would stun U.S. intelligence. In the years that followed, that man, Adolf Tolkachev, became one of the most valuable spies ever for the U.S. But these activities posed an enormous personal threat to Tolkachev and his American handlers. They had clandestine meetings in parks and on street corners, and used spy cameras, props, and private codes, eluding the ever-present KGB in its own backyard—until a shocking betrayal put them all at risk.*

*The New York Times bestseller that reveals the safety, security, and survival techniques that 99% of Americans don't know—but should When Jason Hanson joined the CIA in 2003, he never imagined that the same tactics he used as a CIA officer for counter intelligence, surveillance, and protecting agency personnel would prove to be essential in every day civilian life. In addition to escaping handcuffs, picking locks, and spotting when someone is telling a lie, he can improvise a self-defense weapon, pack a perfect emergency kit, and disappear off the grid if necessary. He has also honed his "positive awareness"—a heightened sense of his surroundings that allows him to spot suspicious and potentially dangerous behavior—on the street, in a taxi, at the airport, when dining out, or in any other situation. In his engaging and empowering book Spy Secrets That Can Save Your Life, Jason shares this know-how with readers, revealing how to: - prevent home invasions, carjackings, muggings, and other violent crimes - run counter-surveillance and avoid becoming a soft target - recognize common scams at home and abroad - become a human lie detector in any setting, including business negotiations - gain peace of mind by being prepared for anything instead of uninformed or afraid With the skill of a trained operative and the relatability of a suburban dad, Jason Hanson brings his top-level training to everyday Americans in this must-have guide to staying safe in an increasingly dangerous world.*
