Richard James Burgess draws on his experience as a producer, a musician, and an author in this history of recorded music, which focuses on the development of music production as both art form and profession. This comprehensive narrative begins in 1860 with the first known recording of an acoustic sound and moves chronologically through the twentieth century, examining the creation of the market for recorded sound, the development of payment structures, the origins of the recording studio and those who work there, and, ultimately, the evolution of the recording industry itself. Burgess charts the highs and lows of the industry through the decades, ending with a discussion of how Web 2.0 has affected music production. The focus remains throughout the book on the role of the music producer, and Burgess offers biographical information on key figures in the history of the industry, including Fred Gaisberg, Phil Spector, and Dr. Dre.

Undergirding Burgess's narrative is the argument that while technology has historically defined the nature of music production, the drive toward greater control over the process, end result, and overall artistry came from producers. In keeping with this unique argument, The History of Music Production incorporates clear yet in-depth discussion of the developmental engagement of technology, business, and art with music production. Burgess builds this history of music production upon the strongest possible foundation: the key transitions, trends, people, and innovations that have been most important in the course of its development over the past 136 years. The result is a deeply knowledgeable book that sketches a critical path in the evolution of music production, and describes and analyzes the impact recording, playback, and disseminative technologies have had on recorded music and music production. Central to the field and a key reference book for students and scholars alike, it will stand as a companion volume to

Burgess's noted, multi-edition book *The Art of Music Production*.

The 2013 IB HL Economics syllabus change introduced Paper 3, an essentially calculations-based assessment. This development challenged teachers and students alike, as few Paper 3 practice resources have been available. This is furthermore an area of the syllabus where, as in Mathematics, practice is fundamentally important in developing the skills and confidence for needed for success. Paul Hoang's latest publication therefore represents an invaluable resource in helping students to prepare for the examination challenges they face. For many candidates the mix of words, theory and numbers in Paper 3 questions can be overwhelming, if they have not developed easy familiarity throughout their course. With clear layout and content that beautifully mirrors IB examination questions, this resource is the one we have all been waiting for. I absolutely recommend it as a 'must have' for all those who are preparing for the HL Economics examination. It is a core resource invaluable to students and teachers alike. Future economic growth lies in the value of experiences and transformations--good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own transformations.

Industrial Policy and the Transformation of the Colonial Economy in Africa

Ownership and Governance of Companies

Economics for the IB Diploma

Industrial Policy and the Transformation of the Colonial Economy in Africa offers an in-depth analysis of the role industrial policy can play in the transformation of African economies. Using examples from Zambia's industrial development experience, this book illustrates that core features of the colonial economy have not just survived six decades of independence in most African countries, but they have continued to shape the nature, scope and pace of economic activities on the continent. The book argues that since the colonial economy in Africa was not intended to serve the interests of Africans, it is imperative that the structures and the underlying rationale of the colonial economy are radically reoriented if economic activities in Africa are to benefit the majority of Africans. Drawing from the Zambian experience, the book shows that the transformation of the colonial economy in Africa is urgently needed. Whilst this has proved to be difficult over the past six decades, it can be done. The book outlines a specific type of industrial policy, Frontier Industrial Policy, as a key instrument for transforming the structure of African economies. At a time when economic growth across Africa is under considerable pressure due to COVID-19, the insights in this book will be of interest to researchers across Economics, Development, Postcolonial Studies, and African Studies.

The multiplier is a central concept in Keynesian and post-Keynesian economics. It is largely what justifies activist full-employment fiscal policy: an increase in fiscal expenditures contributing to multiple rounds of spending, thereby financing itself. Yet, while a copingstone of post-Keynesian theory, it is not universally accepted by all post-Keynesians, for reasons vastly different than the mainstream. This book explores both the pros and cons of the multiplier from a strictly post-Keynesian - and Kaleckian - approach. Anchored within the tradition of endogenous money, this book offers a lively discussion from a number of well-known post-Keynesians from a variety of perspectives: history of thought, theory and economic policy. The book starts by analysing the historical foundations of the Keynesian Multiplier and it's treatment throughout the history of economic thought. Moving through a critical debate about the limits of the multiplier, the contributions finish by offering cutting edge new views on this fascinating concept. .

Equip your learners with the skills central to success. Enabling you to build, extend and perfect the skills crucial to achievement, this text strengthens performance in all areas of assessment. Arranged in four sections, provides review exercises and past examination questions for topics in microeconomics, macroeconomics, international economics, and development economics.

Apartheid South Africa was often thought to run in the interests of the business elite. Yet 27 years after apartheid, those business interests remain largely entrenched. Why? Did the South African business community play a role in engineering this outcome - perhaps recognising the apartheid era was over, and jumping ship in time? Conversely, the mission of the ANC was widely perceived to be to shift wealth and power into the hands of the whole community. Yet despite 'black empowerment' measures, corporate ownership remains largely in white hands - and certainly in the hands of an elite few, even though no longer restricted to whites. This picture is replicated across the global south, where corporate ownership tends to be concentrated in the hands of an elite, rather than being more democratically spread. Why have alternative corporate forms not been pursued more vigorously, with ownership in the hands of customers, employees, and local communities? In the case of South Africa, where the majority of customers and employees are black, this could have delivered on the ANC's mission to replace the apartheid era with a democratic one - in terms of wealth, incomes and power, as well as in terms of voting and civic rights. This edited volume explores all these questions and looks at ways to align corporate forms with economic and social goals. The chapters in this book were originally published as special issues of International Review of Applied Economics.
