*Chemistry and Technology of Soft Drinks and Fruit Juices* John Wiley & Sons

How did products containing absurdly inexpensive ingredients become multibillion dollar industries and international brand icons, while also having a devastating impact on public health? In *Soda Politics*, Dr. Marion Nestle answers this question by detailing all of the ways that the soft drink industry works overtime to make drinking soda as common and accepted as drinking water, for adults and children. Dr. Nestle shows how sodas are principally miracles of advertising; Coca-Cola and PepsiCo spend billions of dollars each year to promote their sale to children, minorities, and low-income populations, in developing as well as industrialized nations. And once they have stimulated that demand, they leave no stone unturned to protect profits. That includes lobbying to prevent any measures that would discourage soda sales, strategically donating money to health organizations and researchers who can make the science about sodas appear confusing, and engaging in Corporate Social Responsibility (CSR) activities to create goodwill and silence critics. *Soda Politics* follows the money trail wherever it leads, revealing how hard Big Soda works to sell as much of their products as possible to an increasingly obese world.--From publisher description.

We all witness, in advertising and on supermarket shelves, the fierce competition for our food dollars. In this engrossing exposé, Marion Nestle goes behind the scenes to reveal how the competition really works and how it affects our health. The abundance of food in the United States--enough calories to meet the needs of every man, woman, and child twice over--has a downside. Our over-efficient food industry must do everything possible to persuade people to eat more--more food, more often, and in larger portions--no matter what it does to waistlines or well-being. Like manufacturing cigarettes or building weapons, making food is big business. Food companies in 2000 generated nearly \$900 billion in sales. They have stakeholders to please, shareholders to satisfy, and government regulations to deal with. It is nevertheless shocking to learn precisely how food companies lobby officials, co-opt experts, and expand sales by marketing to children, members of minority groups, and people in developing countries. We learn that the food industry plays politics as well as or better than other industries, not least because so much of its activity takes place outside the public view. Editor of the 1988 Surgeon General's Report on Nutrition and Health, Nestle is uniquely qualified to lead us through the maze of food industry interests and influences. She vividly illustrates food politics in action: watered-down government dietary advice, schools pushing soft drinks, diet supplements promoted as if they were First Amendment rights. When it comes to the mass production and consumption of food, strategic decisions are driven by economics--not science, not common sense, and certainly not health. No wonder most of us are thoroughly confused about what to eat to stay healthy. An accessible and balanced account, *Food Politics* will forever change the way we respond to food industry marketing practices. By explaining how much the food industry influences government nutrition policies and how cleverly it links its interests to those of nutrition experts, this path-breaking book helps us understand more clearly than ever before what we eat and why.

How Soda Shook Up the World

Maltural. A Business Plan of a non-alcoholic Malt Soft Drink for the Mexican Market

*An effervescent exploration of the global history and myriad symbolic meanings of carbonated beverages. More than eighty years before the invention of Coca-Cola, sweet carbonated drinks became popular around the world, provoking arguments remarkably similar to those they prompt today. Are they medicinally, morally, culturally, or nutritionally good or bad? Seemingly since their invention, they have been loved—and hated—for being cold or sweet or fizzy or stimulating. Many of their flavors are international: lemon and ginger were more popular than cola until about 1920. Some are local: tarragon in Russia, cucumber in New York, red bean in Japan, and chinotto (exceedingly bitter orange) in Italy. This book looks not only at how something made from water, sugar, and soda became big business, but also how it became deeply important to people—for fizzy drinks' symbolic meanings are far more complex than the water, gas, and sugar from which they are made.*

*This guideline provides updated global, evidence-informed recommendations on the intake of free sugars to reduce the risk of NCDs in adults and children, with a particular focus on the prevention and control of unhealthy weight gain and dental caries. The recommendations in this guideline can be used by policy-makers and programme managers to assess current intake levels of free sugars in their countries relative to a benchmark. They can also be used to develop measures to decrease intake of free sugars, where necessary, through a range of public health interventions. Examples of such interventions and measures that are already being implemented by countries include food and nutrition labelling, consumer education, regulation of marketing of food and non-alcoholic beverages that are high in free sugars, and fiscal policies targeting foods and beverages that are high in free sugars. This guideline should be used in conjunction with other nutrient guidelines and dietary goals, in particular those related to fats and fatty acids (including saturated fatty acids and trans-fatty acids), to guide development of effective public health nutrition policies and programmes to promote a healthy diet.*

*Obesity is a global public health problem of crucial importance. Obesity rates remain high in high-income countries and are rapidly increasing in low- and middle- income countries. Concurrently, the global consumption of unhealthy products, such as soft drinks and processed foods, continues to rise. The ongoing expansion of multinational food and beverage companies, or 'Big Food', is a key factor behind these trends. This collection provides critical insight into the global expansion of 'Big Food', including its incursion into low-and-middle income countries. It examines the changing dynamics of the global food supply, and discusses how low-income countries can alter the 'Big Food'-diet from the bottom-up. It examines a number of issues related to 'Big Food' marketing strategies, including the way in which they advertise to youths and the rural poor. These issues are discussed in terms of their public health implications, and their relation to public health activities, for example 'soda taxes', and the promotion of nutritionally-healthier products. This book was originally published as a special issue of Critical Public Health.*

The aim of this research was to determine the health of Rooh Afza as a brand and determine the effectiveness of the brand's marketing programs. The study used qualitative and quantitative research methods to develop an understanding of the consumer's perception regarding Rooh Afza. Also, a perspective from the brand's management was included by meeting the Marketing Director and Chairman of Hamdard foundation, the parent company of Rooh Afza. As far as the health of the brand is concerned, consumer responses revealed that due to Rooh Afza's 100 year presence in our part of the world, it has been the childhood drink for most of the consumers. But since the brand has had a very minimal presence on the ATL and the BTL front, consumers have lost their recall for the brand vis a vis competition (both direct and indirect) which not only advertises heavily but has also come up with extensions and modifications to the product. Rooh Afza has been at a standstill since it was established and so it has lost on maintaining the same relevance with the newer generations which have been attracted and tapped by the Nestles and Pepsis of the world. The management is of the view that they do not want Rooh Afza to change in the way it has been. Though they are looking into some extensions, the approach in that area is not very aggressive. Based on our analysis, we feel that the brand still has very strong roots and consumers still have a very strong association with the brand. It is just that these associations have gone at the back of the consumers' mind. We recommend strategies to the management for both brand extension as well as brand development. These recommendations have been based on both the consumer insights that we gathered as well as the management's perspective on the brand.

***Bachelor Thesis from the year 2016 in the subject Business economics - Company formation, Business Plans, grade: 1,4, University of the Americas Puebla, language: English, abstract: Through the development of this business plan, the feasibility of launching a new carbonated soft drink on the Mexican market was analyzed. The analysis showed that there exists a huge potential for healthier beverages, especially in the upper classes as they are already more conscious of the importance of healthier nutrition. The company's beverage containing malt, hops and yeast not only looks like a healthy alternative but it also really offers a nutritive refreshment full of vitamins, which can perfectly respond to the upcoming market demand and at the same time distinguish itself perfectly from indirect competitors. At the moment of launch, the company will not have any direct competitor. Studies showed that 77% of health product purchases are functional; Maltural fits flawlessly in this product segment as it not only offers nutrition but also vegetable proteins, minerals like calcium and iron and various B vitamins.***

***The Cola Wars have long fascinated students of American business. Until 30 years ago, Coca-Cola clearly dominated the carbonated soft-drink industry, but with Pepsi-Cola's challenge in the 1960s, the market environment became fiercely competitive. Rivalry was well publicized and intense. Now recognized as two of the premier marketing companies in the world, Coke and Pepsi created and implemented management strategies to deal aggressively, not reactively, with the competition between them. How they have changed their product and marketing strategies, and altered their corporate structures to reflect them, is explored here in detail. More than a case study, this book will be a valuable how-to for corporate management in other highly competitive arenas and an informative inside look for their marketing and sales teams.***

Credit is essential in the modern world and creates wealth, provided it is used wisely. The Global Credit Crisis during 2008/2009 has shown that sound understanding of underlying credit risk is crucial. If credit freezes, almost every activity in the economy is affected. The best way to utilize credit and get results is to understand credit risk. Advanced Credit Risk Analysis and Management helps the reader to understand the various nuances of credit risk. It discusses various techniques to measure, analyze and manage credit risk for both lenders and borrowers. The book begins by defining what credit is and its advantages and disadvantages, the causes of credit risk, a brief historical overview of credit risk analysis and the strategic importance of credit risk in institutions that rely on claims or debtors. The book then details various techniques to study the entity level credit risks, including portfolio level credit risks. Authored by a credit expert with two decades of experience in corporate finance and corporate credit risk, the book discusses the macroeconomic, industry and financial analysis for the study of credit risk. It covers credit risk grading and explains concepts including PD, EAD and LGD. It also highlights the distinction with equity risks and touches on credit risk pricing and the importance of credit risk in Basel Accords I, II and III. The two most common credit risks, project finance credit risk and working capital credit risk, are covered in detail with illustrations. The role of diversification and credit derivatives in credit portfolio management is considered. It also reflects on how the credit crisis develops in an economy by referring to the bubble formation. The book links with the 2008/2009 credit crisis and carries out an interesting discussion on how the credit crisis may have been avoided by following the fundamentals or principles of credit risk analysis and management. The book is essential for both lenders and borrowers. Containing case studies adapted from real life examples and exercises, this important text is practical, topical and challenging. It is useful for a wide spectrum of academics and practitioners in credit risk and anyone interested in commercial and corporate credit and related products.
