Kaufmann and Schwitters have built this text's reputation on clear and concise exposition, numerous examples, and plentiful problem sets. This traditional text consistently reinforces the following common thread: learn a skill; practice the skill to help solve equations; and then apply what you have learned to solve application problems. This simple, straightforward approach has helped many students grasp and apply fundamental problem solving skills necessary for future mathematics courses. Algebraic ideas are developed in a logical sequence, and in an easy-to-read manner, without excessive vocabulary and formalism. The open and uncluttered design helps keep students focused on the concepts while minimizing distractions. Problems and examples reference a broad range of topics, as well as career areas such as electronics, mechanics, and health, showing students that mathematics is part of everyday life. The text's resource package—anchored by Enhanced WebAssign, an online homework management tool—saves instructors time while also providing additional help and skill-building practice for students outside of class. Elementary Algebra, Third Edition focuses on the basic principles, operations, and approaches involved in elementary algebra. The book first ponders on the basics, linear equations and inequalities, and graphing and linear systems. Discussions focus on the elimination method, solving linear systems by graphing, word problems, addition property of equality, solving linear equations, linear inequalities, addition and subtraction of real numbers, and properties of real numbers. The text then takes a look at exponents and polynomials, factoring, and rational expressions. Topics include reducing rational expressions to lowest terms, addition and subtraction of rational expressions, factoring integers, quadratic equations, greatest common factor and factoring by grouping, multiplication with exponents, and addition and subtraction of polynomials. The manuscript examines more quadratic equations and roots and radicals, including complex solutions to quadratic equations, completing the square, graphing parabolas, properties of radicals, and multiplication and division of radicals. The publication is a dependable reference for students and researchers interested in elementary algebra.

Main topics: Mental counting; Counting on the abacus; Addition & Subtraction (3 & 4 digit numbers); Multiplication & division; Division with remainder; Multiplying & dividing by 10, 100; Perimeter & Area; Equations & Inequalities; Word problems; Time problems; Multiplying & dividing by 10, 100; Rounding; Standard and expanded form; Addition, subtraction, multiplication, and division terms; Order of operations; Logical reasoning problems; Memory & logic training. With our notebooks "Mathematics + Mental Arithmetic with no struggle: Part 3" your kids will easily master the techniques for quick mental counting, will repeat how to multiply in a column, how to find the perimeter and area of a shape, and how to add and subtract three-digit numbers. Also, kids will learn to write a number in standard and expanded form, learn long division and finding the remainder, multiplying and dividing numbers by 10-100-1000, learn to solve simple problems on finding the time, and solve word problems with 2 steps. The Math Country team is made up of practicing mathematics teachers with a combined teaching experience of more than 35 years, who are also authors of unique methods of intensive children's education. Using our materials, kids learn important skills such as: mental counting while solving math problems; photographic memory and spatial orientation; logical, critical, and analytical thinking; the ability to concentrate and focus attention; belief in their own ability to solve a problem (leads to greater self-esteem and being more focused on the result); increased artistic potential and creative thinking; improvement of hearing and optical memory. This serves as great preparation for the Gifted and Talented tests. A feature of our notebooks is the symbiosis of mental arithmetic and classical mathematics. This allows the use of both hemispheres of the brain simultaneously. This helps in developing memory, imagination, and visualization; and helps kids reach a high understanding of the material. In total, this exponentially increases the speed at which the learning process happens allowing kids to easily solve problems of different levels of difficulty. Mental arithmetic is a UNIQUE method of teaching children that trains the speed of perception and processing of information and allows them to simultaneously develop both hemispheres of the brain at the same time by mentally visualizing the calculations on the abacus. A developed brain is a basis for successful future activities. Our colorful notebook and the style of having exercises in the form of games lets children learn the material easily and hassle-free. Also, the workbook contains a lot of funny pictures and interesting tasks that create positive motivation for learning and actively develop the logic, memory, attention, and intelligence of children. The material consists of 10 lessons plus additional exercises for homework to repeat. We wish you and your child succeed in learning mathematics and mental arithmetic!
