(V2), a new paradigm and key component of IBM Big Data platform. Data has traditionally been stored in files or databases, and then analyzed by queries and applications. With stream computing, analysis is performed moment by moment as the data is in motion. In fact, the data might never be stored (perhaps only the analytic results). The ability to analyze data in motion is called real-time analytic processing (RTAP). IBM InfoSphere Streams takes a fundamentally different approach to Big Data analytics and differentiates itself with its

distributed runtime platform, programming model, and tools for developing and debugging analytic applications that have a high volume and variety of data types. Using in-memory techniques and analyzing record by record enables high velocity. Volume, variety and velocity are the key attributes of Big Data. The data streams that are consumable by IBM InfoSphere Streams can originate from sensors, cameras, news feeds, stock tickers, and a variety of other sources, including traditional databases. It provides an execution platform

approach Practical advice on managing dashboard design programs This is not just a design book - it's a 'how to book' It provides real-life examples, independent of the type of software being used. Dashboard design is not intuitive and goes beyond the way a dashboard looks. Effective dashboards perform well because they have the right KPIs visualized in the best possible way. This book covers both of these elements. Starting from a proven theoretical background from visualization experts such as Edward Tufte and Stephen Few - it then takes a step further into the detailed thought processes behind tweaking every graph. In spite of strong opinions based on factual research, EDD is no 'listen to me, I'm an expert' kind of book. It gets to the

raw heart of what makes a dashboard perform - not just look good. The design concepts in this book are founded on proven practices - not just personal preferences. They make sense. They constantly aim to give the end user more value. The advice given is immediately applicable to any dashboard in any business.

BI Consulting Group has developed what is recognized as the most complete, most comprehensive set of dashboard and report design "best practice" standards ever developed, specific to Oracle Business Intelligence (formerly Siebel Business Analytics). These best practices have not been created simply to provide a "standard" , instead they

interpreted. With a capable and efficient business intelligence (BI) solution, all levels of an organization can receive information how, when, and where they need it to make faster and better aligned decisions. Every user can have access to all the capabilities of the BI solution, and often organizations can determine a user's business need to access information using typical characteristics that are defined by that user's role. Many organizations often satisfy this

complexity and these diverse demands with a number of point solutions. With IBM® Cognos® Business Intelligence (BI), you can satisfy needs throughout the user community and ensure that everyone can work and collaborate from a consistent set of data. In addition, IT is simplified with fewer components to deploy, manage, and maintain. Organizations need to make the most of a workforce that is increasingly driven to multi-task, network, and collaborate.
