The New York Times bestselling authors of Switch and Made to Stick explore why certain brief experiences can jolt us and elevate us and change us—and how we can learn to create such

extraordinary moments in our life and work. While human lives are endlessly variable, our most memorable positive moments are dominated by four elements: elevation, insight, pride, and connection. If we embrace these elements, we can conjure more moments that matter. What if a teacher could design a lesson that he knew his students would remember twenty years later? What if a manager knew how to create an experience that would delight customers? What if you had a better sense of how to create memories that matter for your children? This book delves into some fascinating mysteries of experience: Why we tend to remember the best or worst moment of an experience, as well as the last moment, and forget the rest. Why “we feel most comfortable when things are certain, but we feel most alive when they’re not.” And why our most cherished memories are clustered into a brief period during our youth. Readers discover how brief experiences can change lives, such as the experiment in which two strangers meet in a room, and forty-five minutes later, they leave as best friends. (What happens in that time?) Or the tale of the world’s youngest female billionaire, who credits her resilience to something her father asked the family at the dinner table. (What was that simple question?) Many of the defining moments in our lives are the result of accident or luck—but why would we leave our most meaningful, memorable moments to chance when we can create them? The Power of Moments shows us how to be the author of richer experiences. The fourth in the six-level Insights course to develop English language skills, designed for teenagers from near-beginner to intermediate level, with 4 units of activities and exercises focusing on reading, writing, listening, vocabulary, grammar and speaking skills.

In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of

passion and persistence she calls “grit.” “Inspiration for non-geniuses everywhere” (People). The daughter of a scientist who frequently noted her lack of “genius,” Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In Grit, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she’s learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll.

“Duckworth’s ideas about the cultivation of tenacity have clearly changed some lives for the better” (The New York Times Book Review). Among Grit’s most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is “a fascinating tour of the psychological research on success” (The Wall Street Journal).

This unique study uncovers the lives and working conditions of a group of individuals who are usually rendered invisible on college campuses--the custodians who daily clean the offices, residence halls, bathrooms and public spaces. In doing so it also reveals universities' equally invisible practices that frequently contradict their espoused values of inclusion and equity, and their profession that those on the margins are important

members of the campus community. This vivid ethnography is the fruit of the year's fieldwork that Peter Magolda's undertook at two universities. His purpose was to shine a light on a subculture that neither decision-makers nor campus community members know very much about, let alone understand the motivations and aspirations of those who perform this work; and to pose fundamental questions about the moral implications of the corporatization of higher education and its impact on its lowest paid and most vulnerable employees. Working alongside and learning about the lives of over thirty janitorial staff, Peter Magolda becomes privy to acts of courage, resilience, and inspiration, as well as witness to their work ethic, and to instances of intolerance, inequity, and injustices. We learn the stories of remarkable people, and about their daily concerns, their fears and contributions. Peter Magolda raises such questions as: Does the academy still believe wisdom is exclusive to particular professions or classes of people? Are universities really inclusive? Is addressing service workers' concerns part of the mission of higher education? If universities profess to value education, why make it difficult for those on the margins, such as custodians, to "get educated." The book concludes with the research participants' and the author's reflections about ways that colleges can improve the lives of those whose underpaid and unremarked labor is so essential to the smooth running of their campuses. Appendices provide information about the research methodology and methods, as well as a discussion of the influence of corporate managerialism on ethnographic research. The text is focused primarily on the academic skills of reading, writing, listening, and

speaking, with an emphasis on writing. Video contains four lectures: Proximate and ultimate causes of animal behavior; Stranger intervention; Power and international relations; UFOs.

Why Certain Experiences Have Extraordinary Impact

Five Key Changes to Practice
Growing Up in the Care of Strangers

In this much needed resource, Maryellen Weimer-one of the nation's most highly regarded authorities on effective college teaching-offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning. To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather than to the content delivery alone.

An inspiring account of teachers in ordinary circumstances doing extraordinary things, showing us how to transform education What School Could Be offers an inspiring vision of what our teachers and students can accomplish if trusted with the challenge of developing the skills and ways of thinking needed to thrive in a world of dizzying technological change. Innovation expert Ted Dintersmith took an unprecedented trip across America, visiting all fifty states in a single school year. He originally set out to raise awareness about the urgent need to reimagine

education to prepare students for a world marked by innovation--but America's teachers one-upped him. All across the country, he met teachers in ordinary settings doing extraordinary things, creating innovative classrooms where children learn deeply and joyously as they gain purpose, agency, essential skillsets and mindsets, and real knowledge. Together, these new ways of teaching and learning offer a vision of what school could be—and a model for transforming schools throughout the United States and beyond. Better yet, teachers and parents don't have to wait for the revolution to come from above. They can readily implement small changes that can make a big difference. America's clock is ticking. Our archaic model of education trains our kids for a world that no longer exists, and accelerating advances in technology are eliminating millions of jobs. But the trailblazing of many American educators gives us reasons for hope. Capturing bold ideas from teachers and classrooms across America, *What School Could Be* provides a realistic and profoundly optimistic roadmap for creating cultures of innovation and real learning in all our schools.

One of the world's leading child psychologists shatters the myth of "good parenting" Caring deeply about our children is part of what makes us human. Yet the thing we call "parenting" is a surprisingly new invention. In the past thirty years, the concept of parenting and the multibillion dollar industry surrounding it have transformed child care into obsessive, controlling, and goal-oriented labor intended to create a particular kind of child and therefore a particular kind of adult. In *The Gardener and the Carpenter*, the pioneering developmental psychologist and philosopher Alison Gopnik argues that the familiar twenty-first-century picture of parents and children is profoundly wrong--it's not just based on bad science, it's bad for kids and parents, too. Drawing on the study of human evolution and her own cutting-edge scientific

Read Free Insights 2 Students Book And Workbook Pack With Macmillan

research into how children learn, Gopnik shows that although caring for children is profoundly important, it is not a matter of shaping them to turn out a particular way. Children are designed to be messy and unpredictable, playful and imaginative, and to be very different both from their parents and from each other. The variability and flexibility of childhood lets them innovate, create, and survive in an unpredictable world. “ Parenting” won't make children learn—but caring parents let children learn by creating a secure, loving environment.

Drawing on her neurology expertise and classroom experience, author Judy Willis examined decades of learning-centered brain research to determine what information was most valid and relevant for educators. The result is a comprehensive and accessible guide for improving student learning based on the best the research world has to offer. Willis takes a reader-friendly approach to neuroscience, describing how the brain processes, stores, and retrieves material and which instructional strategies help students learn most effectively and joyfully. You will discover how to captivate and hold the attention of your students and how to enhance their memory and test-taking success. You will learn how to know when students are ready for learning and when their brains need a rest. You will also learn how stress and emotion affect learning and how to improve student engagement. And you will find innovative techniques for designing assessments and adjusting teaching practices to ensure that all students reach their potential. No matter what grade or subject you teach, *Research-Based Strategies to Ignite Student Learning* will enrich your repertoire of teaching strategies so you can help students reach their full academic potential.

Groucho Marx Outside of a Dog is the captivating account of twenty-five books drawn from the fields of literature, psychology and philosophy, and a memoir of a reading self. Tracing the formative role books have played in his life, Rick Gekoski trains the same ironic and analytic eye on these books and their authors as he does on himself.
