The Third Edition of International Accounting provides an overview of the broadly defined area of international accounting, but also focuses on the accounting issues related to international business activities and foreign operations. This edition also includes substantially updated coverage of the International Accounting Standards Board (IASB) and International Financial Reporting Standards (IFRS). The unique benefits of this textbook include its up-to-date coverage of relevant material, extensive numerical examples provided in most chapters, two chapters devoted to the application of International Financial Reporting Standards (IFRS), and coverage of nontraditional but important topics such as strategic accounting issues of multinational companies, international corporate governance, and corporate social responsibility reporting.

The increasing pace of global conformance towards the adoption of International Financial Reporting Standards (IFRS) highlights the need for accounting students as well as accounting practitioners to be conversant with IFRS. Teaching IFRS offers expert descriptions of, and insights into, the IFRS convergence process from a teaching and learning perspective. Hence this book is both timely and likely to have considerable impact in providing guidance for those who teach financial reporting around the world. The contents of the book come from authoritative sources and offer something distinctive to complement the existing textbooks which typically focus on the technical aspects of IFRS and their adoption. Drawing upon the experiences of those who have sought to introduce IFRS-related classroom innovations and the associated student outcomes achieved therefrom, the book offers suggestions about how to design and deliver courses dealing with IFRS and catalogues extensive listings of IFRS-related teaching resources to support those courses. This book was originally published as a special issue of Accounting Education: An international journal.

Intermediate Accounting: IFRS Edition provides the tools global accounting students need to understand IFRS and how it is applied in practice. The emphasis on fair value, the proper accounting for financial instruments, and the new developments related to leasing, revenue recognition, and financial statement presentation are examined in light of current practice. Global Accounting Insights highlight the important differences that remain between IFRS and U.S. GAAP, and discuss the ongoing joint convergence efforts to resolve them. Comprehensive, up-to-date, and accurate, Intermediate Accounting: IFRS Edition includes proven pedagogical tools, designed to help students learn more effectively and to answer the changing needs of this course.

Globalization evokes mixed responses. It is praised for facilitating business, greater trade between nations and reducing poverty, and is also accused of causing job losses and homogenizing culture. While some nations cheer its benefits, others think of barriers to protect themselves. Yet, everyone agrees that it is a multidimensional and complex process that continuously reshapes our environment. Rather than wonder whether globalization is good or bad, it is important to understand how it impacts nations, organizations and individuals and be prepared to operate in that context.

In this volume, we examine how the institutional environment affects entrepreneurial organizations, and vice-versa. This includes not only how the institutional environment constrains both founding processes and the type of organizations founded, but also how institutional dynamics construct new entrepreneurial opportunities, empower and facilitate action, and how entrepreneurs manipulate the institutional environment to serve their own ends. This institutional approach to entrepreneurship shifts attention away from the personal traits and backgrounds of individual entrepreneurs, and towards how institutions shape entrepreneurial opportunities and actions; how entrepreneurs navigate their cognitive, normative, and regulatory environments; and, how actors modify and build institutions to support new types of organizations.

International Accounting and Transnational Decisions explores a wide range of significant international accounting issues with special reference to the comparative development of national systems of accounting, international accounting standards, transnational financial

reporting issues and financial planning and control in the multinational corporation. The book is organized into five parts. Part I discusses the international dimensions of accounting including both the financial reporting and managerial decision-making perspectives. The second part is concerned with the comparative international aspects of accounting. The Part III presents developments and questions relating to international accounting standards. The fourth part considers a number of selected transnational financial reporting issues of concern both to managers and financial statement users. The last part takes a managerial perspective in its coverage of important problems of transnational financial decision making and control. Accountants and students of accounting will find the book useful. This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).
