The story is the richest heritage of human civilizations. One can imagine the first stories being told, several thousand centuries ago, by wise old men huddled around campfires. Since this time, the narrative process has been considerably developed and enriched: sounds and music have been added to complement the speech, while scenery and theatrical sets have been created to enhance the story environment. Actors, dancers, and technicians have replaced the lone storyteller. The

story is no longer the sole preserve of oral narrative but can be realized in book, theatrical, dance, or movie form. Even the audience can extend up to several million individuals. And yet in its many forms the story lies at the heart of one of the world ' s most important industries. The advent of the digital era has enhanced and accelerated this evolution: image synthesis, digital special effects, new Human-Computer interfaces, and the Internet allow one not only to realize more sophisticated narrative forms but also to create new concepts such as video gaming and virtual environments. The art of storytelling is becoming evermore

complex. Virtual reality offers new tools to capture, and to interactively modify the imaginary environment, in ever more intuitive ways, coupled with a maximum sensory feedback. In fact, virtual reality technologies offer enhanced and exciting production possibilities for the creation and non-linear manipulation in real time, of almost any story form. This has led to the new concept of Virtual Storytelling.

Carbon nanotubes are rolled up graphene sheets with a quasi-one-dimensional structure of nanometer-scale diameter. In these last twenty years, carbon nanotubes have attracted much attention from physicists, chemists, material scientists, and electronic device engineers, because of their excellent structural, electronic, optical, chemical and mechanical properties. More recently, demand for innovative industrial applications of carbon nanotubes is increasing. This book covers recent research topics regarding syntheses techniques of carbon nanotubes and nanotube-based composites,

Cutting Edge Internal Auditing provides guidance and knowledge for every internal auditor, encouraging each to pioneer new ground in the development of their professional practices in all risk management, control and governance processes. Serving as an excellent reference guide that develops a pattern of internal auditing now and for the future, this book explores the concept of 'cutting edge' internal auditing as an imaginative adventure: demonstrating how this has influenced and will continue to influence the development of professionalism in internal auditing. Built on the foundations of Jeffrey Ridley's extensive internal auditing experience across the public and private sectors, the author uses his articles and research to explore and develop the

motivations, goals and categories of innovation in internal auditing today. It develops and brings up to date an imaginative internal auditing model, created and used by the author in the early 1980s, drawing on research and guidance by The Institute of Internal Auditors Inc., its Research Foundation and the Institute of Internal Auditors - UK and Ireland. Each chapter stands alone by focusing on an individual internal auditing theme, considered from both the perspective of internal auditing and its customers to suggest an appropriate vision as a goal for every internal audit activity. Each chapter also includes self-assessment questions to challenge the readers understanding of its messages. Companion website contains some of the author's training slides and seventy case studies, many written by leading

environmental sounds and how such sounds are likely to affect human quality of life and well-being and the experience of a place. The research focus over the years has been gradually shifting from treating sound simply as “ noise ” and something that cities should get rid of to a potential “ resource ” to promote and support community life in public spaces. Three main topics or “ needs ” to be addressed by researchers and practitioners emerged from this Special Issue: (1) the need to re-think “ quietness ” in cities as something that goes beyond the mere “ pursuit of silence ” , (2) the need to integrate additional contextual factors in the characterization and management of urban acoustic environments for public health, and (3) the need to consider

the acoustic quality of indoor spaces as opposed to an outdoor-only perspective. The contributions collected in this book will hopefully trigger new questions and inform the agenda of future researchers and practitioners in the environmental acoustics domain.
