Climate Change Solutions represents an application of critical theory to examine proposed solutions to climate change. Drawing from Marx’s negative conception of ideology, the authors illustrate how ideology continues to conceal the capital-climate contradiction or the fundamental incompatibility between growth-dependent capitalism and effectively and justly mitigating climate change. Dominant solutions to climate change that offer minor changes to the current system fail to address this contradiction. However, alternatives like degrowth involve a shift in priorities and power relations and can offer new systemic arrangements that confront and move beyond the capital-climate contradiction. While there are clear barriers to a systemic transition that prioritizes social and ecological well-being, such a transition is possible and desirable.

The study of the ocean is almost as old as the history of mankind itself. When the first seafarers set out in their primitive ships they had to understand, as best they could, tides and currents, eddies and vortices, for lack of understanding often led to loss of life. These primitive oceanographers were, of course, primarily statisticians. They collected what empirical data they could, and passed it down, inially by word of mouth, to their descendants. Data collection continued throughout the millenia, and although data bases became larger, more re liable, and better codified, it was not really until surprisingly recently that mankind began to try to understand the physics behind these data, and, shortly afterwards, to attempt to model it. The basic modelling tool of physical oceanography is, today, the partial differential equation. Somehow, we all "know" that if only we could find the right set of equations, with the right initial and boundary conditions, then we could solve the mysteries of ocean dynamics once and for all.

Peter DeJong and Insoo Kim Berg's INTERVIEWING FOR SOLUTIONS features a proven, solutions-oriented approach to basic interviewing that views clients as competent, helps them to visualize the changes they want, and builds on what they are already doing that works. Throughout the book, the authors present models for solution-focused work, illustrated by examples and supported by research. Too often in practice, there is a tendency to pathologize clients, requiring a diagnosis as part of the helping relationship. Suppose, however, that most of the client problems that social workers encounter have more to do with the vagaries of life and not with what clients are doing wrong. This powerful idea is the philosophy behind the strengths-based approaches to social work. This groundbreaking practice handbook takes this concept one step further, combining the different strengths-based approaches into an overarching model of solution-oriented social work for greater impact. The strengths perspective emphasizes client strengths, goal-setting, and a shared definition of positive outcome. Solution-focused therapy approaches ongoing problems when they have temporarily abated, amplifying exceptions as solutions. This natural but rarely explored pairing is one component in the challenging and effective practice framework presented here by the authors, two seasoned practitioners with over 50 years of combined experience. By integrating the most useful aspects of the major approaches, a step-by-step plan for action emerges. With this text in hand, you will: - Integrate elements from the strengths perspective, solution-focused therapy, narrative therapy, and the strategic therapy of the Mental Research Institute (the MRI approach) into an effective and eclectic framework - Build and practice your skills using case examples, transcripts, and practical advice - Equip yourself with the tools you need to emphasize clients' strengths - Challenge the diagnosis-first medical model of behavioral health care - Collaborate with clients to get past thinking (first-order change), and more to acting "outside the box" (second-order change) - Learn to work with a wide variety of clients, including individuals, groups, and families; involuntary clients; clients with severe mental illness; and clients in crisis For any student or practitioner interested in working with clients towards collaborative and empowering change, this is the essential text.

Since the coming into force of the United Nations Law of the Sea, states have been targeting outlying islands to expand their exclusive economic zones, simultaneously stirring up strident nationalism when such plans clash with those of neighbouring states. No such actions have brought the world closer to the brink of war than the ongoing face-off between China and Japan over the Diaoyu/Senkaku islands, an uninhabited archipelago in the East China Sea. In this timely and original book, Godfrey Baldacchino provides a detailed exploration of seven tried and tested solution protocols that have led to innovative 'win-win' solutions to island disputes over the last four centuries. A closer look at the circumstances and processes that brought contending regional powers to an honourable, even mutually advantageous, settlement over islands provides a convincing and original argument as to why the conflict over the Diaoyu/Senkaku islands need not conclude in a 'zero-sum' or 'winner takes all' solution, as is the likely outcome of both open conflict and international arbitration. The book will be of interest to scholars and practitioners concerned with the festering Diaoyu/Senkaku dispute, as well as students, scholars and policy specialists in geography, geopolitics, international relations, conflict studies, island studies, Asian studies and history.

This book examines the treaties that promised self-government, financial assistance, cultural protections, and land to the more than 565 tribes of North America (including Alaska, Hawaii, and Canada) • Examines more than twenty primary source documents from treaties made between American Indians and the U.S. government between the late 18th and 19th centuries • Contextualizes primary source documents with essays on topics such as treaty-making, the American Indian perspective, and treaties made between the Civil War and Reconstruction period to help students more fully understand their significance • Includes images of original, signed treaties negotiated between tribes and the U.S. government, which offers visual learners concrete evidence by which to connect with the events that transpired • Includes key terms such as "doctrine of discovery," "guardianship," and "sovereignty," enabling

students to grasp the complexity of federal negotiations.

This volume presents a unique and powerful brief therapy approach that combines the best elements of the strategic and narrative traditions in family therapy. Highly effective in treating a broad range of clinical problems, this integrative model enables therapists to alter meanings while working toward behavior change in a goal-directed framework. Taking readers step by step through the process of change, the book shows how problems develop from the mishandling of ordinary life events and how therapists can map problem cycles, reframe problems with respect, and work with clients to create simple and elegant solutions.

Ionic Surfactants and Aqueous Solutions: Biomolecules, Metals and Nanoparticles covers a wide range of subjects related to aqueous systems, from reverse micelles as ion exchangers to the study of micellar phase transfer catalysis for nucleophilic substitution reactions. The diverse background, expertise and professional interests of the contributors to this book give to it a unique richness of approach in topics of relevance for biotechnology and environmental studies. Over sixty publications presenting research results from the summit of successful professional careers, they have taken a second look to the state of the art in the fields that they had pioneered. Eva Rodil and Ana Soto, who had their research formation in the group of Professor Alberto Arce at Universidade de Santiago de Compostela, Spain, are presently professors at that university. Maen Husein is a professor at University of Calgary, Canada. Remy Dumortier, Mohammad Khoshkbarchi, Hamid Rabie and Younok Dumortier Shin, are presently active leaders in the industrial world in Canada, and coauthors of the book Classical Thermodynamics of Fluid Systems.

This is a new and updated edition of this acclaimed first business book on the powerful, simple yet subtle approach to positive change in people, teams and organisations. Used around the world by a wide range of people, professions and organisations, the first edition has now sold nearly 10,000 copies and been translated into 7 languages. Including new chapters reflecting the increasing importance of coaching and the solutions focus movement in the business environment, this wide-ranging book is filled with all the most important ideas, case examples and practical tips for managers, facilitators and consultants. Proven in many fields and with a distinguished intellectual heritage, "The Solutions Focus" provides a simple and direct route to progress in your organisation. It focuses on: solutions - not problems; in between: the action is in the interaction; make use of what's there; possibilities - past, present and future; and language. Every case is different. The trouble with traditional approaches to people problems is that they assume a straightforward relationship between cause and effect, between a problem and its solution. A solutions-focused approach sidesteps the search for the causes of a problem and heads straight for the solution, showing you how to envisage your preferred future and quickly takes steps forward. The authors present a set of practical techniques, including specific forms of questioning that lead to immediate action and results. They show how to identify what is working in your organisation and amplify it to make useful changes; to focus on what is possible rather than what is intractable and how to be solution focused, not solution forced.

The assessment of individual differences has generated shockwaves affecting sociology, education, and a number of other behavioral sciences as well as the fields of management and organizational behavior. In covering the assessment of individual differences, this book pays tribute to the interests and activities that Douglas N. Jackson has incorporated into his career as a psychologist. He continues to be a leader in putting academic findings to practical use. He has also inspired generations of students with his mastery of complex concepts and as a personal example of the ability to balance several simultaneous areas of research. Consistent with the focus of Jackson's research, the theme of this book will be how the use of deductive, construct-driven strategies in the assessment of individual differences leads to benefits in terms of the applicability of the assessment instruments and the clarity of the conclusions that can be drawn from the research.
