Revised edition of: Introduction to Java programming / Y. Daniel Liang, Armstrong Atlantic State University. Tenth edition. Comprehensive version. 2015.

This book assumes very little or no knowledge of how computers work, and shows how to write understandable programs in Java. Even though most readers will not wish to become professional programmers, programming is fun and useful, and, in today's world it is important for professionals in any field to appreciate what computers can (and cannot) do well. To reach this level of understanding, Per Brinch Hansen goes beyond the routine skills of a computer user and explains the art of programming in some depth, allowing readers to write Java programs for use on the WWW or company's Intranet. Although a book about programming with Java, the same methods can be used for systematic programming in such languages as C, Fortran, and Pascal. The book makes a splendid text for a one semester course on beginning programming and is backed by teaching aids available at the author's Website.

About the book The book is compiled to complement either of the two books, Program Practically with Java (Eclipse IDE Version) or Program Practically with Java (IntelliJ IDEA Version). The book consists of 100 exercises and accompanying suggested solutions which follow at the end of the 100 exercises. The aim is to help you reinforce your Java programming skills and is part of the 'Build your programming muscle series' by the same author which currently includes the books: PROGRAM PRACTICALLY WITH - JAVA (Eclipse IDE Version) PROGRAM PRACTICALLY WITH - JAVA (IntelliJ IDEA Version) PROGRAM PRACTICALLY WITH - JAVA (Scenarios and Solutions) The 100 exercises are split into 10 Labs each with 10 exercises and further details of two approaches to using the book labs and exercises is given in the next page. The book exercises are aimed at giving you hands on practical programming experience which is essential if you wish to get the best understanding of the Java language. Hands on experience whilst reading this book is the key to success. Remember "Life begins at the edge of our comfort zone" Think about now and believe. Often the thought of getting started can make us 'frightened' and 'uncomfortable'. Programming can be rewarding and completing the exercises will enhance your programming skills and how to debug code, as you fix the errors that will inevitably arise. As you complete the labs and exercises think about learning as a dot. When you start the exercises your Java learning dot is small but as you progress with the exercises, the dot will increase in size. It is not how big the dot becomes that is important but simply that the dot is increasing. No matter how 'expert' someone is at Java there will always be an opportunity to learn more and as such the dot continually gets larger.
