This book is intended as an undergraduate text introducing matrix methods as they relate to engineering problems. It begins with the fundamentals of mathematics of matrices and determinants. Matrix inversion is discussed, with an introduction of the well known reduction methods. Equation sets are viewed as vector transformations, and the conditions of their solvability are explored. Orthogonal matrices are introduced with examples showing application to many problems requiring three dimensional thinking. The angular velocity matrix is shown to emerge from the differentiation of the 3-D orthogonal matrix, leading to the discussion of particle and rigid body dynamics. The book continues with the eigenvalue problem and its application to multi-variable vibrations. Because the eigenvalue problem requires some operations with polynomials, a separate discussion of these is given in an appendix. The example of the vibrating string is given with a comparison of the matrix analysis to the continuous solution. Table of Contents: Matrix Fundamentals / Determinants / Matrix Inversion / Linear Simultaneous Equation Sets / Orthogonal Transforms / Matrix Eigenvalue Analysis / Matrix Analysis of Vibrating Systems

Success Is An Exaggeration debunks our most common notions about success. Achieving success is too often represented as a complex and demanding process, one that is out of the reach of most people. But success is very relative, not necessarily the result of a sequence of great ideas and uncompromising effort. It is often the outcome of flashes of brilliant behavior, belief, attitude, and approach that each of us demonstrates in our daily lives, often without any training or realization. Once we become aware of these traits and transform them into sustainable habits, success starts to unfold. This book is a daisy chain of easy flowing chapters with examples from the workplace, sports, movies, and life in general that nudge the reader toward these flashes of brilliance—brilliance that can be repeated and help construct fulfilling and

rewarding outcomes. This is a book not only for the professional trying to build a successful career. It is directed at anyone anywhere, doing anything with the intention of being good at it.
