Includes Errata Sheet of Notice to Mariners (NTM) 22/13. This book contains a complete copy of the Inland and International Navigation Rules as presented by the United States Coast Guard. The Coast Guard requires that an up-to-date copy such as this one be carried on all vessels 12 meters (39 feet) or more in length at all times. In addition to a complete copy of the USCG edition (COMDTINST M16672.2D), Paradise Cay Publications has added the following features to make our book more useful and comprehensive. 1) We have created an Annotated Contents. This added feature will help guide the reader to a desired rule. The topic of each subsection of the rules has been noted for quick reference along with the page numbers for Inland and International Rules. 2) We have updated this edition for corrections presented in Notice to Mariners up through November 15, 2004. 3) We have included detailed instructions on how to log on to the NGA (National Geospatial-Intelligence Agency, formerly NIMA) website and update this Rules Publication.

This book is a practical guide to using the science of attachment and relationships to find the right life partner. If you were brought up in the Western world, you've been trained on fairy tales of love and relationships that are misleading at best, and at worst have you making mistake after mistake in starting relationships with the wrong kinds of people who will waste your time and keep you from finding a loyal partner. Science has the answer! Or at least a guide to save you the time and effort of discovering for yourself how many wrong types of romantic partners there are. Reading this book will help you recognize the signs of some of the syndromes that prevent people from being good partners. We'll go through those syndromes and point out some of the signs. Those little red flags you sometimes notice when you are getting to know someone? Often they speak loud and clear once you understand the types, and you can decide immediately to run away or approach with caution those who show them. If you're young and just starting to look for a partner, good news-the world is swarming with well-adjusted, charming matches for you, if you know how to recognize them. The bad news: you are inexperienced and you may not recognize the right type of person when you date them. Many people expect to experience an immediate sense of excitement, an overwhelming rush of attraction, and to fall in love rapidly and equally with someone who feels the same. This rarely happens, and when it does it usually ends badly! And expecting it will cause you to let go of people who are steady, loving, and attentive, if you had given them a chance. So once you've identified someone who makes you laugh, answers your messages, and is there for you when you want them, don't make the mistake of tossing them aside for the merely good-looking, sexy, or intriguing stranger. If you're older, bad news: while you were spending time and effort on relationships you were hoping would turn out better, or even happily nestled in a good relationship or two, most of the secure, reliable, sane people in your age group got paired off. They're married or happily enfamilied, and most of the people your age in the dating pool are tragically unable to form a good long-term relationship. You should always ask yourself, "why is this one still available?"-there may be a good answer (recently widowed or left a long-term relationship), or it may be that this person has just been extraordinarily unlucky in having over twenty short relationships in twenty years (to cite one case!) But it's far more likely you have met someone with a problematic attachment style. As you age past 40, the percentage of the dating pool that is able to form a secure, stable relationship drops to less than 30%^[1]; and since it can take months of dating to understand why Mr. or Ms. SeemsNice is really the future ex-partner from Hell, being able to recognize the difficult types will help you recognize them faster and move on to the next. This book outlines the basics (which might be all you need), and points you toward more resources if you want to understand more about your problem partner. If you're wondering if the guy or girl you've been hanging out with might not be quite right, this is the place to match those little red flags you've noticed with known bad types. And by getting out fast, you can avoid emotional damage and wasted time, and get going on finding someone who's really right for you. Study all of the bad types and you'll detect them before even getting involved. Or you could be one of the few people who recognizes their own problems in one of these types. There are study materials and plans of action for you, too. If you've had lots of relationships and they all seem to go wrong, the common factor is you! Your task is to make yourself into a better partner - a goal that even the most evolved of us can always

work toward.

Cryptography is now ubiquitous – moving beyond the traditional environments, such as government communications and banking systems, we see cryptographic techniques realized in Web browsers, e-mail programs, cell phones, manufacturing systems, embedded software, smart buildings, cars, and even medical implants. Today's designers need a comprehensive understanding of applied cryptography. After an introduction to cryptography and data security, the authors explain the main techniques in modern cryptography, with chapters addressing stream ciphers, the Data Encryption Standard (DES) and 3DES, the Advanced Encryption Standard (AES), block ciphers, the RSA cryptosystem, public-key cryptosystems based on the discrete logarithm problem, elliptic-curve cryptography (ECC), digital signatures, hash functions, Message Authentication Codes (MACs), and methods for key establishment, including certificates and public-key infrastructure (PKI). Throughout the book, the authors focus on communicating the essentials and keeping the mathematics to a minimum, and they move quickly from explaining the foundations to describing practical implementations, including recent topics such as lightweight ciphers for RFIDs and mobile devices, and current key-length recommendations. The authors have considerable experience teaching applied cryptography to engineering and computer science students and to professionals, and they make extensive use of examples, problems, and chapter reviews, while the book's website offers slides, projects and links to further resources. This is a suitable textbook for graduate and advanced undergraduate courses and also for self-study by engineers.

The Simulating Waves Nearshore (SWAN) model is a numerical wave model used to obtain realistic estimates of wave parameters in coastal areas, lakes, and estuaries from given wind, bottom, and current conditions. The model is based on the wave action balance equation (or energy balance in the absence of currents) with sources and sinks. SWAN is a third-generation wave model with first-, second-, and third-generation options.

Pumping Station Design, Second Edition shows how to apply the fundamentals of various disciplines and subjects to produce a well-integrated pumping station that will be reliable, easy to operate and maintain, and free from design mistakes. In a field where inappropriate design can be extremely costly for any of the foregoing reasons, there is simply no excuse for not taking expert advice from this book. The content of this second edition has been thoroughly reviewed and approved by many qualified experts. The depth of experience and expertise of each contributor makes the second edition of Pumping Station Design an essential addition to the bookshelves of anyone in the field.

This contributory volume is a comprehensive collection on the mangrove forest eco-system and its ecology, the resources and potentials of mangroves, conservation efforts, mangrove eco-system services and threats to conservation. The book is an all-inclusive compilation on the status, conservation and future of mangroves. Mangroves are a unique ecosystem providing several ecosystem services. They are formed in the inter-tidal areas of large rivers and coastal islands. Mangroves thrive due to constant interaction with the terrestrial and marine ecosystem. These are the species dynamics, varying tidal amplitudes, plant succession, changing floral pattern of the channels of the estuary, the varying sediment transportation. There was 20% decline in mangrove forest area in the last 25 years due mainly to conversion and coastal development. Lengthy recovery periods required for the degraded mangrove forests. Hence there is an urgent need to take stock of the updated information on these mangroves at global level. It is of immense value to scientific community involved in teaching, research and extension activities related to mangrove conservation.

Food-borne diseases are major causes of morbidity and mortality in the world. It is estimated that about 2.2 million people die yearly due to food and water contamination. Food safety and consequently food security are therefore of immense importance to public health, international trade and world economy. This book, which has 10 chapters, provides information on the incidence, health implications and effective prevention and control strategies of food-related diseases. The book will be useful to undergraduate and postgraduate students,

educators and researchers in the fields of life sciences, medicine, agriculture, food science and technology, trade and economics. Policy makers and food regulatory officers will also find it useful in the course of their duties.

This 2004 textbook fills a gap in the literature on general relativity by providing the advanced student with practical tools for the computation of many physically interesting quantities. The context is provided by the mathematical theory of black holes, one of the most elegant, successful, and relevant applications of general relativity. Among the topics discussed are congruencies of timelike and null geodesics, the embedding of spacelike, timelike and null hypersurfaces in spacetime, and the Lagrangian and Hamiltonian formulations of general relativity. Although the book is self-contained, it is not meant to serve as an introduction to general relativity. Instead, it is meant to help the reader acquire advanced skills and become a competent researcher in relativity and gravitational physics. The primary readership consists of graduate students in gravitational physics. It will also be a useful reference for more seasoned researchers working in this field.

In this book, psychotherapist David Richo explores how we replay the past in our present-day relationships—and how we can free ourselves from this destructive pattern. We all have a tendency to transfer potent feelings, needs, expectations, and beliefs from childhood or from former relationships onto the people in our daily lives, whether they are our intimate partners, friends, or acquaintances. When the Past Is Present helps us to become more aware of the ways we slip into the past so that we can identify our emotional baggage and take steps to unpack it and put it where it belongs. Drawing on decades of experience as a psychotherapist, Richo helps readers to:

• Understand how the wounds of childhood become exposed in adult relationships—and why this is a gift

• Identify and heal the emotional wounds we carry over from the past so that they won't sabotage present-day relationships

• Recognize how strong attractions and aversions to people in the present can be signals of own own unfinished business

• Use mindfulness to stay in the present moment and cultivate authentic intimacy

One Hundred Proofs that the Earth is Not a Globe

Knowledge of word meanings is critical to success in reading. A reader cannot fully understand a text in which the meaning

to a significant number of words is unknown. Vocabulary knowledge has long been correlated with proficiency in reading.

Yet, national surveys of student vocabulary knowledge have demonstrated that student growth in vocabulary has been

stagnant at best. This volume offers new insights into vocabulary knowledge and vocabulary teaching. Articles range from a

presentation of theories of vocabulary that guide instruction to innovative methods and approaches for teaching vocabulary.

Special emphasis is placed on teaching academic and disciplinary vocabulary that is critical to success in content area

learning. Our hope for this volume is that it may spark a renewed interest in research into vocabulary and vocabulary

instruction and move toward making vocabulary instruction an even more integral part of all literacy and disciplinary

instruction.

Would life be better without alcohol? It's the nagging question more and more of us are finding harder to ignore, whether we

have a "problem" with alcohol or not. After all, we yoga. We green juice. We meditate. We self-care. And yet, come the end

of a long work day, the start of a weekend, an awkward social situation, we drink. One glass of wine turns into two turns into

a bottle. In the face of how we care for ourselves otherwise, it's hard to avoid how alcohol really makes us feel... terrible. How

different would our lives be if we stopped drinking on autopilot? If we stopped drinking altogether? Really different, it turns

out. Really better. Frank, funny, and always judgment free, Sober Curious is a bold guide to choosing to live hangover-free,

from Ruby Warrington, one of the leading voices of the new sobriety movement. Drawing on research, expert interviews, and

personal narrative, Sober Curious is a radical take down of the myths that keep so many of us drinking. Inspiring, timely, and

blame free, Sober Curious is both conversation starter and handbook—essential reading that empowers readers to transform their relationship with alcohol, so we can lead our most fulfilling lives.

As the title indicates, this unique resource is a manual on comparative linguistics, with the examples taken exclusively from Semitic languages. It is an innovative volume that recalls the earlier tradition of textbooks of comparative philology, which, however, exclusively treated Indo-European languages. It is suited for students with at least a year of a Semitic language. By far the largest component of the book are the nine wordlists that provide the data to be manipulated by the student. Says reviewer Peter Daniels, the wordlists "constitute a unique resource for all of comparative linguistics--a considerable quantity of uniform data from a host of related languages. They would be useful for any class in comparative linguistics, not just for those interested specifically in Semitic." Scattered throughout the text are 25 exercises based on the wordlists that provide a good introduction to the methods of comparativists. Also included are paradigms of the phonological systems of ten Semitic languages as well as Coptic and a form of Berber. A bibliography that guides the student into further reading in Semitic linguistics completes the volume.

First published in 1895, this volume contains a series of arguments against the idea that the world is round. The belief that the Earth is flat and not a globe existed in many ancient civilisations, but we now know that this is not true. However, even today there are those who believe in a flat earth, just as there was when ideas of a spherical earth were relatively new. Within this book, the author explains why these new ideas of the planet as a globe are absurd, with interesting examples and explanations as to precisely why. Highly recommended for those with an interest in Flat Earth theory and the history of astronomy. Contents include: "Ships 'Going Down!'", "How Much Loner Will it Be?", "Absurd Theory!", "No Proof to be Had", "When the Man Has Time!", "Earth A Globe", "The Scientific Wager of 1870", "Our Opponents Ways and Means", etc. Many vintage books such as this are increasingly scarce and expensive. It is with this in mind that we are republishing this book today in an affordable, modern edition complete with the original text and artwork.
