***When Robert Pirsig's Zen and the Art of Motorcycle Maintenance was first published in 1974, it caused a literary sensation. An entire generation was profoundly affected by the story of the narrator, his son, Chris, and their month-long motorcycle odyssey from Minnesota to California. A combination of philosophical speculation and psychological tension, the book is a complex story of relationships, values, madness, and, eventually, enlightenment. Ron Di Santo and Tom Steele have spent years investigating the background and underlying symbolism of Pirsig's work. Together, and with the approval of Robert Pirsig, they have written a***

The goal of this book is to gain a clear picture of the current status and future challenges with regard to the digitalization of the supply chain – from the perspective of the suppliers, the manufacturers, and the customers. They were the target groups of the book. Digitization has touched upon all aspects of businesses, including supply chains. Technologies such as RFID, GPS, and sensors have enabled organizations to transform their existing hybrid (combination of paper-based and IT-supported processes) supply chain structures into more flexible, open, agile, and collaborative digital models. Unlike hybrid supply chain models, which have resulted in rigid organizational structures, unobtainable data, and disjointed relationships with partners, digital supply chains enable business process automation, organizational flexibility, and digital management of corporate assets. In order to reap maximum benefits from digital supply chain models, it is important that companies internalize it as an integral part of the overall business model and organizational structure. Localized disconnected projects and silo-based operations pose a serious threat to competitiveness in an increasingly digital world. The technologies discussed in this text – artificial intelligence, 3D printing, Internet of things, etc. – are beginning to come together to help digitize, automate, integrate, and improve the global supply chains. It's certainly an exciting and challenging time for both new supply chain

The possibility of nondestructively characterizing the microstructure, morphology or mechanical properties of materials is certainly a fascinating subject. In principle, such techniques can be used at all stages of a material's life - from the early stages of processing, to the end of a structural component's useful life. Interest in the subject thus arises not only from a purely scientific point of view but is also strongly motivated by economic pressures to improve productivity and quality in manufacturing, to insure the reliability and extend the life of existing structures. The present volume represents the edited papers presented at the Second International Symposium on the Nondestructive Characterization of Materials, held in Montreal, Canada, July 21-23, 1986. The Proceedings are divided into eight sections, which reflect the

multidisciplinary nature of characterizing materials nondestructively: Polymers and Composites, Ceramics and Powder Metallurgy, Metals, Layered Structures/Adhesive Bonds/Welding, Degradation/Aging, Texture/ Anisotropy, Stress, and New Techniques. Invited papers by R. Hadcock of Grumman Aircraft Systems, R. Cannon of Rutgers University, H. Yada of Nippon Steel and R. Bridenbaugh of Alcoa review respectively the processing of polymer matrix composites, ceramics, steel and aluminum, emphasizing the need for material property sensors to improve process and quality control. Two other invited papers, one by A. Wedgwood of Harwell and the other by P. Holler of the IzFP in Saarbrucken review state of the art techniques to characterize particulate matter and metals respectively.

An Erotic Paranormal Romance... After a series of girls are ritualistically murdered on the cold streets of Philadelphia, seasoned detective, Sydney Willows, is forced to work with sexy, alpha vampire, Kade Issacson. While working the case, Sydney finds herself inexplicably drawn to Kade, fighting the passion she feels towards him. Kade, determined to solve the case and mete out justice, is captivated by the independent, fiery detective. As he attempts to protect her from a very real murderer, Kade grows concerned that the beautiful, but very human detective, could easily end up dead should she tangle with supernatural forces that are beyond her control. The investigation leads them into a dark and dangerous world, deep in the heart of New Orleans, where together, they search for the perpetrators of the Voodoo killings. Sydney soon becomes the target of the killer and ends up fighting for her life and love in the Big Easy. If she makes it out alive, will she give into the intoxicating desire she feels for Kade?

This is the most complete account ever written of racing with the Kawasaki USA team in the years between 1967 and 1978, It is also the most authentic, as it is written by the man who

was the company racing manager and a development engineer on the racing motorcycles from 1971 through 1983. The full story of the Kawasaki racing effort is the subject of this 344 page book, with full details of the machines and the men who raced them with great success in the Formula 750cc class in both the USA and Europe. Many anecdotes and reminiscences by the author are joined with his memories of the riders and the races contested as well as in-depth technical details of the development and preparation of the machines. There are well over 100 photographs by leading motorcycle photographers , including superb full-colour studio pictures and rare archive material from back in the day..

Maria Costello is one of the most instantly recognisable faces in British motorsport. Blonde, petite, pretty and bubbly, she is the opposite of most people's image of a motorbike racer. Yet Maria has competed on equal terms in this most demanding man's world for over a decade, smashing the Isle of Man TT lap record. This is her story.
