Elevate your backyard veggie patch into a work of sophisticated and stylish art. Kitchen Garden Revival guides you through every aspect of kitchen gardening, from design to harvesting—with expert advice from author Nicole Johnsey Burke, founder of Rooted Garden, one of the leading US culinary landscape companies, and Gardenary, an online kitchen gardening education and resource company. Participating in the grow-your-own movement is important to both reduce your food miles and control what makes it onto your family's table. If you've hesitated to take part because installing and caring for a traditional vegetable garden doesn't seem to suit your life or your sense of style, Kitchen Garden Revival is here to show you there's a better, more beautiful way to grow food. Instead of row after row of cabbage and pepper plants plunked into a patch of dirt in the middle of the yard, kitchen gardens are attractive, highly tailored food gardens consisting of easy-to-maintain raised planting beds laid out in an organized geometric pattern. Offering both four seasons of ornamental interest and plenty of fresh, homegrown fruits, vegetables, and herbs, kitchen gardens are the way to grow your own food in a fashionable, modern, and practical way. Kitchen gardens were once popular features of the European and early American landscape, but they fell out of favor when our agrarian roots were displaced by industrialization. With this accessible and inspirational guide, Nicole aims to return the kitchen garden to its rightful place just outside of every backdoor. Learn the art of kitchen gardening as you discover: What characteristics all kitchen gardens have in common How to design and install gorgeous kitchen garden beds using metal, wood, or stone Why raised beds mean reduced maintenance What crops are best for your kitchen garden A planting, tending, and harvesting plan developed by a pro Season-by-season growing guides It's time to join the Kitchen Garden Revival and start growing your own delicious, organic food.

The Cotton Planter's Manual

The states of Pohnpei and Yap in the Federated States of Micronesia currently produce limited amount of food locally. Exporting food is also limited therefore importing substantial quantities of vegetables, fruits and root crops amounts to millions of dollars annually. This is partly owing to a lack of necessary information on crop production locally to assist producers in their production. To help contribute to rectifying this situation, this manual is aimed to provide guidelines for farmers and producers on seedling production and management, plant spacing, cropping program, soil fertility and crop protection.

An excerpt from the first chapter: A Kitchen Garden, and the Wonders it Works. Vegetable growers have their failures as well as their successes. Why, therefore, do they not suffer the depressions of other men? Ah! There's the crux! Any ass can be happy when the sun shines and the thistles are thick, but it wants a philosophical ass to be able to bra cheerfully when food is scarce and beatings fall thick and fast. Without claiming that this is a particularly complimentary metaphor, I yet proceed to extract the kernel from it. The vegetable grower is the superior member of society which he is simply and solely because he is able, through good and through evil report, to retain his equanimity. It is not easy to say why vegetable growers are, as a class, so contented, but the fact is beyond dispute. If I myself were asked to define that fascination which makes my Potato patch more enjoyable to me than an art gallery, or a theatre, or a Parliament house, or a museum, I should very likely be at a loss to answer. Even in the inner ring-the garden itself, with its rockery, its Rose beds, its fruit quarters, its greenhouse-the kitchen garden is the centre of interest. Yes! there is no possible doubt about it, vegetable culture is of all things on this earth the most completely seductive and satisfying. In the few chapters on vegetables which I propose to give, I want my readers to agree with me in putting the subject on this higher plane. I want them to go into it as I do, with an enthusiastic and wholehearted joy. There is, in some quarters, a craven fear of acknowledging the fascination of Pea growing; we will have none of it here. I once heard the words *infra dig*, murmured in connection with manual labour in a kitchen garden. I responded with the one pun of my life, and here it is: "Yes, and I am IN FOR A DIG!" The pun was execrable, but the spirit of the response I unflinchingly support. Let "Infra dig." be the watchword of the lily-fingered, and "In for a dig" be the battle-cry of you and I. Is there a person reading these lines who is hovering on the brink of kitchen gardening? His plot is small, mayhap, and he has had no training; perhaps his purse is shallow. Let me link his arm in mine, and tell him, in words of earnestness if not of eloquence, to fear not neither to despair; rather to take his courage in both hands, and send his seed order off by the very next post...
