Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global

Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.

book are leaders in the user interface (UI) community actively working in mobile platform technology and mobile application design. Thus, this book offers the reader unique insight into the latest technologies, market trends, design ideas, and usability data. We provide the reader with the latest information that will have direct and immediate impact on a broad scope of product design decisions, including those for voice, phone, and personal digital assistant (PDA) applications. In other words, this book is written by practitioners, for practitioners. When I approached my coauthors about writing a chapter, I had only a few criteria. First, each author should have unique experience and expertise about a certain aspect of mobile applications. Second, that the authors be able to provide an introduction to the technologies with which they work. Third, that each chapter include case studies and lessons learned from empirical usability evaluations. And fourth, that each author include in the chapter some fundamental knowledge that they wish they had known when they got started designing for the mobile context.
