More than twenty years have passed since Walter Auffenberg's monumental *The Behavioral Ecology of the Komodo Monitor*. In the intervening years the populations of Komodo dragons—native only to a handful of islands in southeast Indonesia—have dwindled, sparking intensive conservation efforts. During the last two decades new information about these formidable predators has emerged, and the most important findings are clearly presented here. A memoir from Walter Auffenberg and his son Kurt is followed by the latest information on Komodo dragon biology, ecology, population distribution, and behavior. The second part of the book is dedicated to step-by-step management and conservation techniques, both for wild and captive dragons. This successful model is a useful template for the conservation of other endangered species as well, for, as Kurt and Walter Auffenberg note, “The species may well indeed survive in the wild for generations to come while countless other organisms are lost.”

I-Spy Aircraft

A computer program subroutine, FLUID, was developed to calculate thermodynamic and transport properties of pure fluid substances. It provides for determining the thermodynamic state from assigned values for temperature-density, pressure-density, temperature-pressure, pressure-entropy, or pressure-enthalpy. Liquid or two-phase (liquid-gas) conditions are considered as well as the gas phase. A van der Waals model is used to obtain approximate state values; these values are then corrected for real gas effects by model-correction factors obtained from tables based on experimental data. Saturation conditions, specific heat, entropy, and enthalpy data are included in the tables for each gas. Since these tables are external to the FLUID subroutine itself, FLUID can implement any gas for which a set of tables has been generated. (A setup phase is used to establish pointers dynamically to the tables for a specific gas.) Data-table preparation is described. FLUID is available in both SFTRAN and FORTRAN Fessler, T. E. A stunning debut; a Departures original publication. The ultimate survival story; a wild ride—the wildest—down a South American river in the thick of the Amazon Basin; a true and thrilling adventure of a young married couple who survive a plane crash only to later raft hundreds of miles across Peru and Bolivia, ending up in a channel to nowhere, a dead end so flooded there is literally no land to stand on. Their raft—a mere four logs—separates them from the piranha-and-caiman-infested water until they finally realize that there is no way out but to swim. Vintage Original. Holly FitzGerald and her husband, Fitz—married less than two years—set out on a yearlong honeymoon adventure of a lifetime, backpacking around the world. Five months into the trip their plane crash lands in Peru at a penal colony walled in by jungle, and their blissfully romantic journey turns into a terrifying nonstop labyrinth of escape and survival. On a small, soon-ravaged raft that quickly becomes their entire universe through dangerous waters alive with deadly animals and fish, their only choice: to continue on, despite the rush of insects swarming them by day, the sounds of encroaching predators at night. Without food or means of communication, with no one to hear their cries for help or on a search-and-rescue expedition to find them, the author and her husband make their way, fighting to conquer starvation and navigate the brute force of the river, their only hope for survival, in spite of hunger and weakening resolve, to somehow, miraculously hang on and find their way east to a large riverside town, before it is too late. . . .
