An Introduction to General, Organic, and Biological Chemistry

Teaching all of the necessary concepts within the constraints of a one-term chemistry course can be challenging. Authors Denise Guinn and Rebecca Brewer have drawn on their 14 years of experience with the one-term course to write a textbook that incorporates biochemistry and organic chemistry throughout each chapter, emphasizes cases related to allied health, and provides students with the practical quantitative skills they will need in their professional lives. Essentials of General, Organic, and Biochemistry captures student interest from day one, with a focus on attention-getting applications relevant to health care professionals and as much pertinent chemistry as is reasonably possible in a one term course. Students value their experience with chemistry, getting a true sense of just how relevant it is to their chosen profession. This full-color, comprehensive, affordable manual is intended for a one-semester general, organic, and biochemistry course, preparatory/basic chemistry course, liberal arts chemistry course, or allied health chemistry course. The procedures are written with the goal of simplifying a complicated and often challenging subject for students by applying concepts to everyday life. The first half of the lab manual covers general topics such as chemical and physical properties, elements of the periodic table, types of bonds, empirical formulas, and reaction stoichiometry. These labs form the foundation for future labs, which cover the basics of organic and biological chemistry. Experiments include the classification of organic compounds and the determination of biomolecules. By the end of this course, students should have a solid understanding of the basic concepts of chemistry, which will give them confidence as they embark on various allied health careers. Features: ?Initiate the study of basic concepts in the general, organic, and biochemistry laboratory by reading through concise introductory material and answering pre-lab questions that familiarize students with the concepts presented in each exercise. The inclusion of color photography and high-quality art promotes engagement and comprehension of the more difficult concepts.?Investigate the mysteries of matter by following the clearly written procedures and recording data and observations on the provided data sheets. Common techniques are reviewed as needed in Technique Tips boxes to reinforce the development of basic laboratory skills. OSHA pictograms, and Lab Safety boxes are provided to help students understand any risks associated with specific chemicals and equipment.?Integrate knowledge of each laboratory topic by making sense of the data that has been collected. Reflective Exercises galvanize critical thinking and scientific analysis skills to take shape as students make connections between what has been learned and practiced in the hands-on lab and how this knowledge can be applied to a relevant, real-world context.

The Essential Lab Manual

An Introduction to General, Organic and Biological Chemistry Laboratory Manual

Green chemistry involves designing novel ways to create and synthesize products and implement processes that will eliminate or greatly reduce negative environmental impacts. The Green Chemistry Laboratory Manual for General Chemistry provides educational laboratory materials that challenge students with the customary topics found in a

general chemistry laboratory manual, while encouraging them to investigate the practice of green chemistry. Following a consistent format, each lab experiment begins with objectives and prelab questions highlighting important issues that must be understood prior to getting started. This is followed by detailed step-by-step procedures for performing the experiments. Students report specific results in sections designated for data, observations, and calculations. Once each experiment is completed, analysis questions test students' comprehension of the results. Additional questions encourage inquiry-based investigations and further research about how green chemistry principles compare with traditional, more hazardous experimental methods. By placing the learned concepts within the larger context of green chemistry principles, the lab manual enables students to see how these principles can be applied to real-world issues. Performing laboratory exercises through green experiments results in a safer learning environment, limits the quantity of hazardous waste generated, and reduces the cost for chemicals and waste disposal. Students using this manual will gain a greater appreciation for green chemistry principles and the possibilities for future use in their chosen careers. This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Laboratory Manual for General, Organic, and Biological Chemistry can accompany the lab portion of any one-semester GOB chemistry course. Most experiments include a link to the health sciences, such as nursing and nutrition, while concepts are framed in real-world questions and are broadly applicable. Many of the experiments illustrate concepts from more than one chapter of the text and often utilize basics from the areas of general, organic, or biological chemistry to develop concepts in one or more of the other areas. This integrated strategy helps students to understand that chemistry is not a disparate set of unrelated concepts. Using this integrated approach, students develop the skills to help them understand chemistry and to see its applications in their everyday lives.

Suitable for one- or two-term lab courses covering general, organic, and biological chemistry, this new edition written by Karen Timberlake features many improvements to the insightful experiments that have made it the leading lab manual. Each experiment encourages critical thinking with laboratory goals, discussion of related concepts, clear instructions, new pre-lab questions, and comprehensive report pages. Forty-one experiments illustrate the basic principles of chemistry.
