Comprehensively researched, extensively illustrated and accessibly presented, this will be an indispensable read for all those who have an interest in the legend that is Land Rover. Superbly illustrated with 476 colour photographs. James Taylor's major specialization is the Rover company and its descendants, and he is widely acknowledged as the pre-eminent historian of the Land Rover.

Revealed to the world in 1948, the Land-Rover not only revived the Rover Company's fortunes in an austerity-riddled post-war period, but galvanized its future, thanks to the model's almost immediate success. With the manufacture of an initial 48 'pre-production' examples coming to a close, the first official production models were assembled – starting with chassis 860001. As original factory records prove, this pivotal vehicle was destined for His Royal Highness King George VI, but the decision was made to postpone the presentation and instead, 'number one' was retained by the factory until 1950, when it was registered JUE 477 before leaving Rover Company ownership. After decades left out in the cold and exposed to the elements, 860001 had certainly seen better days, but thanks to the determination of Sir Jim Ratcliffe, founder and Chairman of INEOS, the future of JUE 477 was secured in 2017. Over the next two years, a dedicated team of experts, led by chief restorer, Julian Shoolheifer set about restoring the vehicle while retaining as much of its original DNA as was physically, and safely, possible and making sure that this remarkable vehicle's history and past life was still worn with pride.

Fully comprehensive with many illustrations – owners' workshop manual for the 90,110 Defender petrol and diesel engines from 1983-on.

The Series II [1958-61] and Series IIA [1961-71] Land Rovers defined the iconic shape of the vehicle which is still instantly recognizable in today's utility models from Land Rover. Compiled over nearly thirty years, with the aid of reference material produced by Land Rover and many dedicated enthusiasts, this comprehensive guide to the specifications of the Series II and IIA vehicles looks not only at Land Rovers as they were when they left the assembly lines but also at dozens of options and 'approved' special conversions - and some which did not receive factory approval, too.

The provision of support for troops in Iraq and Afghanistan is made more difficult because they operate in remote locations and harsh conditions. Despite the challenging operational environments, the Ministry of Defence (MOD) has successfully delivered around 300,000 personnel and 90,000 tonnes of freight to Iraq and Afghanistan over the last two years. However, in a timely fashion. The MOD is taking measures to improve the effectiveness of its supply chain: and the amount of time a unit waits for items to be delivered has reduced by half in Afghanistan and a third in Iraq. 4.2 billion has been approved to upgrade or buy new equipment to meet urgent requirements in the two theatres. The NAO found that the availability of this equipment has been spares shortages with some fleets particularly when the vehicle is used for a different purpose than intended. The availability and serviceability of helicopters has exceeded MOD targets, although prioritisation of spare parts for operations has led to reduced availability in the UK. There are also shortages of equipment for Service personnel in the UK to train with. Services to Service personnel on operations are generally satisfactory although provision at the smaller patrol bases is more basic. The helicopter borne Medical Emergency Response Teams provide quick, life-saving medical support to casualties and evacuate them speedily to hospital.

In a world of increasing dependence on information technology, the prevention of cyberattacks on a nation's important computer and communications systems and networks is a problem that looms large. Given the demonstrated limitations of passive cybersecurity defense measures, it is natural to consider the possibility that deterrence might play a useful role in the request of the Office of the Director of National Intelligence, the National Research Council undertook a two-phase project aimed to foster a broad, multidisciplinary examination of strategies for deterring cyberattacks on the United States and of the possible utility of these strategies for the U.S. government. The first phase produced a letter report providing broad, articulate important questions that can drive research regarding ways of more effectively preventing, discouraging, and inhibiting hostile activity against important U.S. information systems and networks. The second phase of the project entailed selecting appropriate experts to write papers on questions raised in the letter report. A number of experts, identified by the National Academy of Sciences. Commissioned papers were discussed at a public workshop held June 10-11, 2010, in Washington, D.C., and authors revised their papers after the workshop. Although the authors were selected and the papers reviewed and discussed by the committee, the individually authored papers do not reflect consensus views of the committee. The committee's departure that can stimulate further work on the topics discussed. The papers presented in this volume are published essentially as received from the authors, with some proofreading corrections made as limited time allowed.

We're told that the future will be brighter. But what if human happiness really lies in the past? Hobart, 2022: a city with a declining population, in the grip of a dark recession. A rusty ship sails into the harbour and begins to unload its cargo on the site of the once famous but now abandoned Gallery of Future Art, known to the world as GoFA. One day the city's residents are awoken by a high-pitched sound no one has heard for two generations: a factory whistle. GoFA's owner, world-famous billionaire Dundas Faussett, is creating his most ambitious installation yet. He's going to defeat technology's dominance over our lives by establishing a new Year Zero: 1948. Those whose jobs have been destroyed by Amazon and Uber and Airbnb are invited to fight back in the only way that can possibly succeed: by living as if the internet had never been invented. The hold of Bezos, Musk, Zuckerberg and their ilk starts to loosen as the revolutionary example of Factory 19 spreads. Can nostalgia really defeat the future? Can the little people win back the world? We are about to find out. 'Like Orwell, of whom he has written so brilliantly, Dennis Glover's work is charged with courage, intelligence and purpose. He is the complete writer, and one made for our times.' —Don Watson 'Savagely hilarious and unlike anything else you'll read this year. It boils with the anger of the present moment.' —Rohan Wilson Colin Chapman was one of the greatest creative forces in the automotive world but he left behind a mixed legacy. Was he an unparalleled innovator who advanced the state of the art of sports and racing cars? Or was he an uninhibited exploiter of the unaccredited ideas of others? In death as well as life Colin Chapman excites fevered debate about his achievements and methods. Now Karl Ludvigsen gets to grips with the legend, digging deep beneath the skin of Chapman and his cars to explore and expose the motivations that drove this mercurial genius.

This book is both an historic and nostalgic look at the role of the Land Rover in the emergency services over the last 70 years. Land Rover products have been used by the emergency services almost from the moment the first Land Rover left the factory in 1948. Their agility and size made them an immediate hit with fire services, where they initially became popular as factory fire tenders. Their cross-country ability and versatility then attracted police forces, especially outside Britain, and when long-wheelbase models provided extra space, they also became favourites for ambulance conversions. Some emergency-service conversions required very little adaptation, and were carried out in the workshops of the end-users. Others – such as six-wheel Range Rover fire tenders – required major alterations from the factory-standard vehicle. Meanwhile, specialist companies developed dedicated ambulance and fire tender bodywork, creating a fascinating variety of different types. Some of these conversions, such as police patrol vehicles, went on to become part of the background to everyday life. Others are much less well known, and have their own special interest. All of them help to illustrate the versatility and adaptability of Land Rovers and their more modern SUV siblings. Land Rover Emergency Vehicles will interest Land Rover enthusiasts and emergency-vehicle enthusiasts alike, and many of the types illustrated will evoke nostalgic memories of these vehicles in their heyday. The Remarkable History and Restoration of the World's First Production Land-Rover

Land Rover Design - 70 Years of Success

A landmark new history from design journalist Nick Hull, Land Rover Design – 70 years of Success offers a detailed insight to the company's design story, from the early days of Land Rover in Solihull to the latest generation of the Range Rover Velar in 2018. The Land Rover was born from a desperate need by the Rover Company to develop a stop-gap model to provide cashflow in the post-war years. The original aim of a simple 4x4 agricultural tool soon developed into a multi-purpose vehicle that became the mainstay of the British Army and produced numerous offshoots for the emergency services, police, forestry and aid agencies worldwide. This book details the personalities involved in the various projects since the late 1940s up to today: the designers, modellers and studio engineers. It charts the development of Land Rover and Range Rover projects in the UK, particularly those designed in the Gaydon studio that opened in 1996, and is still a key part of JLR ' s design resource. From the early days of chalk drawings and wooden models to today ' s digital renderings and milled clays for the latest Range Rover Evoque, Land Rover ' s designers and technicians have never been short of creativity. This book tells their story, in their own words, and is a fitting tribute to the spirit and ethos of Land Rover design and engineering.

Land Rover Defender, 90 and 110 Range - 30 Years of the Coil-Sprung 4x4 Models charts the evolution of the coil-sprung Defender vehicles. When Land Rover switched from leaf springs to coil springs for their utility models in 1983, it was a major step forward. The first coil-sprung model, the One Ten, replaced the Series III 109s. The short-wheelbase Ninety replaced the Series III 88s in 1984. From 1990, the models were all re-branded as Land Rover Defenders - 90, 110 and 140 - as the Land Rover range expanded and the marketing teams wanted a new name. Topics covered include: Origins of the Defender and early Ninety and One Ten Models; Development and use of the long-wheelbase models; Special conversions and Defenders built outside the UK, including in Australia and South Africa; Military and emergency service use of the Defender; Detailed examinations of engines and engineering, and the focus on diesel power; The future of the Defender. Charts the evolution of the coil-sprung Defender vehicles - the early 90 and 110 models from 1983 to present day. A must buy for all Land Rover enthusiasts. Superbly illustrated with 300 colour photographs. James Taylor is a well-known writer on classic motoring and a specialist on the Land Rover marque.

Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys – half way round the world, from the English Channel to Singapore. They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were ' just too many rivers and too few roads ' . But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work – wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series. They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore – to flash bulbs and champagne. Now, fifty years on, their book, ' First Overland ' , is republished – with a foreword by Sir David Attenborough. After all, it was he who gave them that film.
