Today I am viewed as a well respected systems development and implementation leader between my colleagues and team members. Over the years I have dedicated my self to adding value to my employers and team members. I was born on September 25, 1961 in Niekershoop a very small farming community in Northern Cape Province, South Africa to Francois and Martha Jacobs, both from the traditional South Africa farming culture. Twenty-four years since 1985 in business. My international system implemmentation experience includes countries such as Brazil, Canada, Caribbean, Kazakhstan, Russia, South Africa and United States of America. My biggest value-add is my understanding of Information Systems from both the operational and consulting perspectives. I have management (general, project and business administration management), business analysis (business information analysis and business process engineering) and information system (systems and technology) knowledge and experience in the Consulting, Chemical, Metals, Manufacturing, and Agricultural industries. My leadership and coaching ability is driven by high levels of self motivation, analytical capability, people orientation and ability to communicate at all walks of life. ***This Handbook, with contributions from leading experts in the field, provides a comprehensive, state-of-the-art account of virtual environments (VE). It serves as an invaluable source of reference for practitioners, researchers, and students in this rapidly evolving discipline. It also provides practitioners with a reference source to guide their development efforts and addresses technology concerns, as well as the social and business implications with which those associated with the technology are likely to grapple. While each chapter has a strong theoretical foundation, practical implications are derived and illustrated via the many tables and figures presented throughout the book. The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology. It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design, build, evaluate, implement, and manage the effective use of VE applications. The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology. After providing an introduction to VE technology, the Handbook organizes the body of knowledge into five main parts: \*System Requirements--specifies multimodal system requirements, including physiological characteristics that affect VE system design. \*Design Approaches and Implementation Strategies--addresses cognitive design strategies; identifies perceptual illusions that can be leveraged in VE design; discusses navigational issues, such as becoming lost within a virtual world; and provides insights into structured approaches to content design. \*Health and Safety Issues--covers direct physiological effects, signs, symptoms, neurophysiology and physiological correlates of motion sickness, perceptual and perceptual-motor adaptation, and social concerns. \*Evaluation--addresses VE usability engineering and ergonomics, human performance measurement in VEs, usage protocols; and provides means of measuring and managing visual, proprioceptive, and vestibular aftereffects, as well as measuring and engendering sense of presence. \*Selected Applications of Virtual Environments--provides a compendium of VE applications. The Handbook closes with a brief review of the history of VE technology. The final chapter provides information on the VE profession, providing those interested with a number of sources to further their quest for the keys to developing the ultimate virtual world.***
