This edited volume offers a range of insights about, practices of and findings associated with enriching health and social care students' learning by their engagement in educational processes during and after the completion of their practicum experiences in health and social care settings. That is, using post-practicum intervention to augment and enrich those learning experiences. The collected contributions here draw on the processes of trialing and evaluating educational processes that aimed to enrich those practicum

experiences for purposes of improving students' understandings, abilities to address patients' needs, and health and social care related dispositions. These processes and findings from these processes across medical, nursing, midwifery, physiotherapy, pharmacy, exercise physiology, dietetic and speech pathology education speak directly to educators in both clinical and educational settings in the health and social care sectors. These messages, which arise from educators and clinicians enacting and evaluating these interventions, offer practical suggestions as well as conceptual advances. The reach of the accounts of processes,

findings and evaluations is not restricted to this sector alone, however. The lessons provided through this edited volume are intended to inform how post-practicum interventions might be enacted across a range of occupational fields.

With a lot of patience, understanding, and soul wisdom, Indra takes you to the root causes of relationship problems. Drawing on his extensive experience as a facilitator of family and relationship constellations, he shows you what is causing relationships to run off the rails and how to heal them. By being loyal, we unconsciously carry over behavioral patterns and attitudes from our ancestors. These

loyalties often have a huge impact on our couple relationship-to an extent you could never have imagined. Our ancestors leave us with a kind of blueprint, or mind-set, about life and relationships. This mind-set is a major determining factor in whether our relationships turn out to be happy. Lasting change will come about only if you become aware of these loyalties and learn to let go of destructive behaviors and attitudes inherited from your ancestors. Integrating the wisdom of Heal Your Relationship in your life will give you the power and insights to heal yourself and, of course, improve your relationship skills.

Randomized clinical trials (RCTs)

are often referred to as the "gold standard" of clinical research. However, in its current state, the U.S. clinical trials enterprise faces substantial challenges to the efficient and effective conduct of research. Streamlined approaches to RCTs, such as large simple trials (LSTs), may provide opportunities for progress on these challenges. Clinical trials support the development of new medical products and the evaluation of existing products by generating knowledge about safety and efficacy in pre- and post-marketing settings and serve to inform medical decision making and medical product development. Although well-designed and

-implemented clinical trials can provide robust evidence, a gap exists between the evidence needs of a continuously learning health system, in which all medical decisions are based on the best available evidence, and the reality, in which the generation of timely and practical evidence faces significant barriers. Large Simple Trials and Knowledge Generation in a Learning Health System is the summary of a workshop convened by the Institute of Medicine's Roundtable on Value & Science-Driven Health Care and the Forum on Drug Discovery, Development, and Translation. Experts from a wide range of disciplines-including health information technology,

research funding, clinical research methods, statistics, patients, product development, medical product regulation, and clinical outcomes research-met to marshal a better understanding of the issues, options, and approaches to accelerating the use of LSTs. This publication summarizes discussions on the potential of LSTs to improve the speed and practicality of knowledge generation for medical decision making and medical product development, including efficacy and effectiveness assessments, in a continuously learning health system. use of LSTs to improve the speed and practicality of knowledge generation for medical decision making and medical product development; considers the concepts of LST design, examples of successful LSTs, the relative advantages of LSTs, and the infrastructure needed to build LST capacity as a routine function of care; identifies structural, cultural, and regulatory barriers hindering the development of an enhanced LST capacity; discusses needs and strategies in building public demand for and participation in LSTs; and considers near-term strategies for accelerating progress in the uptake of LSTs in the United States.

sciences has a direct impact on health outcomes, as well as on the quality and the safety of healthcare processes. In addition, the use of new technological developments in medical education has proven to be greatly effective and creates realistic learning environments to experience procedures and devices that will become common in medical practice. However, bringing new technologies into the health sector is a complex task, which is why a comprehensive vision of the health sciences ecosystem (encompassing many different areas of research) is vital.

This book presents a collection of state-of-the-art approaches for deep-learning-based biomedical and health-related applications. The aim of healthcare informatics is to ensure high-quality, efficient health care, and better treatment and quality of life by efficiently analyzing abundant biomedical and healthcare data, including patient data and electronic health records (EHRs), as well as lifestyle problems. In the past, it was common to have a domain expert to develop a model for biomedical or health care applications; however, recent advances in the representation of learning algorithms (deep

learning techniques) make it possible to automatically recognize the patterns and represent the given data for the development of such model. This book allows new researchers and practitioners working in the field to quickly understand the best-performing methods. It also enables them to compare different approaches and carry forward their research in an important area that has a direct impact on improving the human life and health. It is intended for researchers, academics, industry professionals, and those at technical institutes and R&D organizations, as well as students working in the fields of machine learning, deep learning, biomedical engineering, health informatics, and related fields.

mindfulness meditation but you feel something is blocking you? Do you want to reach the next level, expanding your knowledge to enjoy the power of meditation? If so, please keep reading... The popularity of meditation is increasing as more people discover its benefits. Meditation is a habitual process of training your mind to focus and redirect your thoughts. Meditation is a very simple concept, and very difficult to practice perfectly, but fortunately you don't have to practice it perfectly to derive a benefit: you just have to practice it. Nobody really practices it perfectly, but even just starting it can make a huge difference. Learning to meditate is a bit like learning to drive: you can keep going in the supermarket parking lot, but driving in traffic is another matter. You will discover how to bring meditation to every moment of life and, thanks to practicing, you will learn to be present and

steady flow of reliable data is necessary to coordinate and monitor patient care, analyze and improve systems of care, conduct research to develop new products and approaches, assess the effectiveness of medical interventions, and advance population health. The totality of available health data is a crucial resource that should be considered an invaluable public asset in the pursuit of better care, improved health, and lower health care costs. The ability to collect, share, and use digital health data is rapidly evolving. Increasing adoption of electronic health records (EHRs) is being driven by the implementation of the Health Information Technology for Economic and Clinical Health (HITECH) Act, which pays hospitals and individuals incentives if they can demonstrate that they use basic EHRs in 2011. information for improvement, such as the ability to view laboratory results, maintain problem lists, or manage prescription ordering. In addition to increased data collection, more organizations are sharing digital health data. Data collected to meet federal reporting requirements or for administrative purposes are becoming more accessible. Efforts such as Health.Data.gov provide access to government datasets for the development of insights and software applications with the goal of improving health. Within the private sector, at least one pharmaceutical company is actively exploring release of some of its clinical trial data for research by others. This current Research Topic does not derive directly from Boyer's Model of Scholarship, but nonetheless represents a well-timed exploration and example of where higher education has progressed in bringing the innovative, integrative conceptualization of higher education scholarship and practice laid out by Boyer, to realization through the growing arena of undergraduate public health programs. At the same time, the authors included here were invited to specifically address a second arena of scholarly practice associated with additional elements of Boyer's legacy, effective High-Impact Practices (HIPs) - practices that engage students, faculty and often broader communities in integrative learning that connect

Such practices encompass not only the essential learning outcomes that employers continue to demand – critical thinking, working with diverse others, written and oral communications, ethics, analysis, etc. – but also a curriculum that is scaffolded and replete with opportunities to practice and enhance performance and application of knowledge and abilities to important personal, social and global challenges and needs.
