A perennial student favorite, this book simplifies complex pharmacology concepts, using large and small print to distinguish need-to-know drug content from the material that's merely nice to know. It also includes in-depth coverage of physiology, pathophysiology and drug therapy. Written by noted nursing educators Jacqueline Rosenjack Burchum and Laura Rosenthal, this text helps you understand and apply pharmacology principles as opposed to simply memorizing drug facts. Clear, engaging writing style simplifies complex concepts, making

difficult pharmacology content not only understandable but actually enjoyable. Prototype Drugs approach focuses on representative drugs that characterize all members of a given drug group, so that you can apply your understanding to related drugs currently on the market as well as drugs that will be released in the future. Nursing implications of drug therapy are integrated throughout the text to reinforce the integral relationship between drug therapy and nursing care, and also summarized in Summary of Major Nursing Implications sections at the end of

chapters. Special Interest Topic boxes examine the everyday impact of pharmacology with vignettes including Medication Overuse Headache: Too Much of a Good Thing and Antibiotics in Animal Feed: Dying for a Hamburger and Chicken Nuggets. Large print highlights essential, need-to-know information, and small print indicates nice-to-know information. Safety Alerts call out important safety concerns related to contraindications, adverse effects, and more. Patient-Centered Care Across the Life Span tables highlight safe and appropriate care for patients

throughout their lives, from infancy to older adulthood. Concise drug summary tables present key information for individual drugs, including drug class, generic and trade names, dosages, routes, and indications. NEW! Thoroughly updated drug content reflects the latest FDA drug approvals, withdrawals, and therapeutic uses, with revisions to the corresponding nursing content. NEW chapters include Genetic and Genomic Considerations, Muscarinic Antagonists, and Complementary and Alternative Therapy. Preceded by Pharmacology for

nursing care / Richard A. Lehne; in consultation with Linda A. Moore, Leanna J. Crosby, Diane B. Hamilton. 8th ed. c2013.

Reinforcement of key information equips you for success on the NCLEX® Examination and for patient safety (a QSEN core competency) in clinical practice. NCLEX Examination-style questions include multiple-choice, multiple-select, and alternate-item formats, promoting learner engagement and preparing you for success on the NCLEX Exam and for safe clinical practice. Three-part chapter

organization separates content into 1) study questions, 2) NCLEX review and application questions, and 3) dosage calculation questions. Prioritization and delegation questions emphasize skills related to prioritization and delegation, both of which are increasingly being tested on the NCLEX Exam, and are highlighted by special icons. Focus on implications of drugs and drug classes for patient care includes activities and questions that are designed for you to answer "How do the drugs work in the body?" and "How do these drug actions

impact patient care?"

Application- and analysis-level questions are highlighted by special icons, and ask you to integrate other nursing knowledge such as developmental considerations, laboratory values, and symptoms of adverse effects. Detailed rationales for all prioritization questions are included in the answer key and include explanations for both correct and incorrect responses. " "If it's an anthelmintic, I'll try a spot of it," said Potter. - From Bogmail, a novel by Patrick McGinley (1981) With modern techniques of chemical isolation and structure determination, the old distinction between herbal and chemical remedies has largely been broken down. By chemotherapy we now mean simply the treatment of disease by drugs (the word medicines has

The distinction made between chemotherapy and non chemical therapy (e. g. , radiation, physiotherapy, surgical intervention, immunomodulation) remains useful despite some minor overlapping. The present work thus deals with drugs and their use in parasitic disease. (Since we are dealing with the treatment of incipient as well as established infection, chemotherapy subsumes chemoprophylaxis as well as chemotherapeusis per se.)
