An Evidence-based Guide to College and University Teaching outlines a definition of “model teaching” based on research evidence and accepted best practices in high education. Teachers at all levels of skill and experience can benefit from clear, objective guidelines for defining and measuring quality teaching. To fulfil this need, this book outlines six fundamental areas of teaching competency—model teaching characteristics—and provides detailed definitions of each characteristic. The authors define these essential characteristics as training, course content, the assessment process, instructional methods, syllabus construction, and the use of student evaluations. This guide outlines through research and supplemental evidence how each characteristic can be used toward tenure, promotion, teaching portfolios, and general professional development. Additional features include a self-assessment tool that corresponds to the model teaching characteristics, case studies illustrating common teaching problems, and lists of “must reads” about college teaching. An Evidence-based Guide to College and University Teaching describes how college faculty from all disciplines and at all levels of their career – from graduate students to late-career faculty – can use the model teaching characteristics to evaluate, guide, and improve their teaching. The book is additionally useful for teachers, trainers, and administrators responsible for promoting excellence in college teaching.

A Clinical Guide to the Treatment of the Human Stress Response

What Every Healthcare Provider Should Know

*Determinants of health - like physical activity levels and living conditions - have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs. Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2 identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2 will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment, outcomes assessment, and population health measurement.*

*In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.*

**This Research Topic explores issues that are central to the continued relevance of organizational and vocational psychology, and equally central to the well-being of individuals and communities. The cohering theme of this publication revolves around the question of how people can establish meaningful lives and meaningful work experiences in light of the many challenges that are reducing access to decent work. Another essential contextual factor that is explored in this volume is the Decent Work Agenda (International Labour Organization, 2008), which represents an initiative by the International Labour Organization. In this book, we hope to enrich the Decent Work Agenda by infusing the knowledge and perspectives of psychology into contemporary discourses about work, and well-being. Another inspiration for this project emerged from the UNESCO Chair in Lifelong guidance and counseling, recently established in Poland in 2013 under the leadership of Jean Guichard, which has focused on advancing research and policy advocacy about decent work. This new era calls for an innovative perspective in constructing decent work and decent lives: the passage from the paradigm of motivation to the paradigm of meaning, where the sustainability of the decent life project is anchored to a meaningful construction. During this period when work is changing so rapidly, leaving people yearning for a sense of connection and meaning, it’s fundamental to create a framework for an explicitly psychological analysis of decent work.**

**This accessible text looks at the range of soft skills sought after by employers and provides a practical guide to developing and effectively demonstrating these skills. Soft skills -- including communication, customer service, teamwork, problem solving, and personal management -- represent a major component of any worker's professional identity. This book analyzes major soft skills, including both inward-facing soft skills (how workers manage themselves to effectively perform their work) and outward-facing skills (how workers effectively interact with others and in groups). It explores how these skills are rooted in fundamental areas of liberal arts including interpersonal communication, psychology, and ethics. It provides an active learning pedagogy, including creative exercises and case studies through which students can assess their understanding of underlying concepts and their application in real-world situations. The book can be used as a supplement for communication, business, and career-oriented courses, and it will be of interest to individual students and junior professionals as well as career counselors, postsecondary instructors across the curriculum, and professionals in human resources and learning and development.**

*Educational Assessment in a Time of Reform provides background information on large-scale examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.*

*Trends in economic development rely on increasing human knowledge, which stimulate the development of new, sophisticated technologies. With their utilization production is raised and the intent is to decrease natural resources consumption and protect and save our life environment as much as we can. At the same time, increasing pressure is observed both from competition and customers. The way to be competitive is by improving manufacturing and services offered to the customer. These are the major challenges of contemporary enterprises. Organizations are improving their activities and management processes. This is necessary to manage the seemingly intensifying competitive markets successfully. Enterprises apply business-optimizing solutions to meet new challenges and conditions. This way ensuring effective development for long-term competitiveness in a global environment. This is necessary for the implementation of qualitative changes in the industrial policy. "Process Control and Production Management" (MTS 2018) is a collection of research papers from an international authorship. The authors present case studies and empirical research, which illustrates the progressive trends in business process management and the drive to increase enterprise sustainability development.*

This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) – Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings. – Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

From Meaning of Working to Meaningful Lives: The Challenges of Expanding Decent Work

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

This collection brings together contributions from both established scholars and researchers working at the forefront of biopolitical theory, gendered and sexualised governance and the politics of race and migration.

*This book addresses the 'three moments' in lesbian, gay, bisexual, transgender and intersex (LGBTI) asylum seekers' and refugees' efforts to secure protection: The reasons for their flight, the Refugee Status Determination process, and their integration into the host community once they are recognized refugee status. The first part discusses one of the most under-researched areas within the literature devoted to asylum claims based on sexual orientation and gender identity, namely the reasons behind LGBTI persons' flight. It investigates the motives that drive LGBTI persons to leave their countries of origin and seek sanctuary elsewhere, the actors of persecution, and the status quo of LGBTI rights. Accordingly, an intersectional approach is employed so as to offer a comprehensive picture of how a host of factors beyond sexual orientation/gender identity impact this crucial first stage of LGBTI asylum seekers' journey. In turn, the second part explores the challenges that LGBTI asylum seekers face during the RSD process in countries of asylum. It first examines these countries' interpretations and applications of the process in relation to the relevant UNHCR guidelines and questions the challenges including the dominance of Western conceptions and narratives of sexual identity in the asylum procedure, heterogeneous treatment concerning the definition of a particular social group, and the difficulties related to assessing one's sexual orientation within the asylum procedure. It subsequently addresses the reasons for and potential solutions to these challenges. The last part of the book focuses on the integration of LGBTI refugees into the countries of asylum. It first seeks to identify and describe the protection gaps that LGBTI refugees are currently experiencing, before turning to the reasons and potential remedies for them.*

The Oxford Handbook of Behavioral Emergencies and Crises includes the most up-to-date and valuable research on the evaluation and management of the most challenging patients or clients faced by mental health providers-individuals who are at high risk of suicide, of other-directed violence, or of becoming the victims of interpersonal violence. These are cases in which the outcome can be serious injury or death, and there can be negative consequences not only for the patient, but also for the patient's family and friends, for the assessing or treating clinician, and for the patient's clinic or medical center. Virtually all mental health clinicians with an active caseload will see individuals with such issues. This Handbook is comprised of chapters by leading clinicians, researchers, and scholars in this area of practice. It presents a framework for learning the skills needed for assessing and working competently with such high-risk individuals. Chapters draw a distinction between behavioral emergencies and crises, and between emergency intervention and crisis intervention. The book examines the inter-related aspects of the major behavioral emergencies; that is, for example, the degree to which interpersonal victimization may lead an individual on a pathway to later suicidal or violent behavior, or the degree to which suicidal individuals and violent individuals may share certain cognitive characteristics. This resource is not simply a knowledge base for behavioral emergencies; it also presents a method for reducing stress and acquiring skills in working with high-risk people.

This book investigates the legitimacy of the current Australian Financial Services Licensee-Authorised Representative (AFSL-AR) licensing model, as specified in the Commonwealth Corporations Act 2001. The book rectifies the deficiency in scholarly attention to this matter by developing a new conceptualised framework for the financial planning discipline. It takes into account theories in agency, legislation, legitimacy and the independent individual regulatory regimes in other professions; thereafter integrating this framework with the financial planning theory to examine the

legitimacy, or what was found to be the illegitimacy of licensing advisers via multiple third party conflicted commercially oriented licensees. This book makes a very useful reference to understanding financial planning licencing model in Australia.
