Series of pamphlets on countries of the world; revisions issued.

Our human dignity can be taken from us in unjust relationships, which makes resistance and a search for dignity necessary. This search can take place in different ways – in this book through academic studies in theology, ethics and education. Human dignity relates to human rights, which are also explored here; moreover, perspectives from gender and postcolonial theory inform the studies. The reflection on human dignity ends in a discussion of education, making the book a resource in addressing contemporary value issues in education. This collection of lectures, articles and papers covers a certain time period. In the texts particular themes recur, which contributes to continuity and coherence. The focus of more recently written chapters takes the discussion in new directions. Karin Sporre, with a PhD in Ethics from Lund University, Sweden, is Professor in Education focusing on values, gender and diversity at Umeå University, Sweden. Since 2001 she has been actively engaged in co-operation with South African colleagues. This has inspired comparison between South Africa and Sweden, exemplified in some of the chapters in her book "In Search of Human Dignity".

Lessons from Twenty Years of Curriculum Reform in South Africa

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

In 1984 and 1985, the swift succession in the USSR's leadership affected all levels of Soviet society. This eighth volume in a series of biennial reports on the Soviet Union analyzes domestic affairs, economics, and foreign policy in light of that succession. Power struggles within the highest echelons of the Soviet communist party are examined. Contributors evaluate prospects for the attempted economic modernization in a system that leaves little room for radical reform. Moscow's swings between extremes of self-isolation and readiness to talk raise questions about foreign and security policy during die transitional period. The contributors also identify perspectives, priorities, and trends for the future of Soviet politics, economics, and social developments. The Federal Institute for East European and International Studies in Cologne was established in 1961 as an academically autonomous research institution. It operates under the administrative and financial authority of Germany's Federal Ministry of the Interior.

In modernen Wissenschaften ist Bildung die zentrale Voraussetzung sowohl für die demokratische Teilhabe als auch für wirtschaftliches Wachstum und Wohlstand. Eine sich zunehmend rascher wandelnde, globalisierte Welt erfordert die Bewältigung neuer Anforderungen im privaten Leben und in der Berufs- und Arbeitswelt. Um mehr über den Bildungserwerb und seine Folgen für individuelle Lebensverläufe zu erfahren, um zentrale Bildungsprozesse und -verläufe über die gesamte Lebensspanne zu beschreiben und zu analysieren, wird in Deutschland aktuell das Nationale Bildungspanel aufgebaut.

ED-L2L, Learning to Live in the Knowledge Society, is one of the co-located conferences of the 20th World Computer Congress (WCC2008). The event is organized under the auspices of IFIP (International Federation for Information Processing) and is to be held in Milan from 7th to 10th September 2008. ED-L2L is devoted to themes related to ICT for education in the knowledge society. It provides an international forum for professionals from all continents to discuss research and practice in ICT and education. The event brings together educators, researchers, policy makers, curriculum designers, teacher educators, members of academia, teachers and content producers. ED-L2L is organised by the IFIP Technical Committee 3, Education, with the support of the Institute for Educational Technology, part of the National Research Council of Italy. The Institute is devoted to the study of educational innovation brought about through the use of ICT. Submissions to ED-L2L are published in this conference book. The published papers are devoted to the published conference themes: Developing digital literacy for the knowledge society: information problem solving, creating, capturing and transferring knowledge, commitment to lifelong learning Teaching and learning in the knowledge society, playful and fun learning at home and in the school New models, processes and systems for formal and informal learning environments and organisations Developing a collective intelligence, learning together and sharing knowledge ICT issues in education - ethics, equality, inclusion and parental role Educating ICT professionals for the global knowledge society Managing the transition to the knowledge society

The Holocaust - lessons for humanity provides a historical overview of the Holocaust.

Vocationalization of secondary education is taken to mean curriculum change in a practical or vocational direction. Vocationalization is a trend which transcends the divide between rich and poor countries and between different political systems. This volume illustrates the international importance of the theme. Part I deals with the views and expectations relating to the process of vocationalization. Part II is concerned with the process of policy formulation and the conditions impinging on that process. Part III addresses select issues in policy implementation and describes more broadly how vocationalization policies have been implemented throughout the education system of various countries. Finally, Part IV discusses the results of a number of empirical evaluation studies.

From Planning to Assessment

Growing into Resilience

The Journal of Epsilon Pi Tau

This collection is the first of its kind, bringing together Holocaust educational researchers as well as school and museum educators from across the globe, to discuss the potentials of Holocaust education in relation to primary school children. Its contributors are from countries that have a unique relationship with the Holocaust, such as Germany, Israel, neutral Switzerland, and Allied countries outside the UK. Their research provides new insight into the diverse ways in which primary aged students engage with Holocaust education. Chapters explore the impact of teaching the Holocaust to this age group, school and museum teaching pedagogies, and primary students' perspectives of the Holocaust. This book will appeal to school and museum educators of primary aged students whose work requires them to teach the Holocaust, Citizenship (or Civics) or Human Rights Education. Since the turn of the twenty-first century there has been a transformation in school and museum-based Holocaust education. This book clearly demonstrates that primary education has been included in this transformation.

History Education is a politically contested subject. It can be used to both promote xenophobia and to develop critical thinking, multiple perspectives, and tolerance. Accordingly, this book critically examines complex issues and constructivist approaches that make history relevant to students' understanding of the modern world. As such, it has global appeal especially in North and South America, Canada, Europe and Asia. The book's authors address the major challenges that History Education faces in an era of globalisation, digital revolution and international terror, nationalism and sectarian and religious conflict and warfare. Central to this volume are controversial issues, trauma, and questions of personal and national identity from a wide range of international settings and perspectives. The research in this book was undertaken by leading history educators from every continent. Their interdisciplinary research represents an important contribution to the teaching of social sciences, social psychology, civic education programmes, history and history education in schools, colleges and universities. The book offers new approaches to history educators at all levels. In addition, the chapters offer potential as required reading for students to both develop an international perspective and to compare and contrast their own situations with those that the book covers. Section I considers issues related to identity; how can history education promote social coherence in multicultural societies, in societies divided by sectarianism, or countries adapting to regime changes, whether Communist or Fascist, including, for example, South Africa, previously Communist countries of Eastern Europe, and previous dictatorships in South America and Western Europe. It discusses such questions as: How important is it that students learn the content of history through the processes of historical enquiry? What should that content be and who should decide it, educators or politicians? What is the role of textbooks and who should write and select them? Should history be taught as a discrete discipline or as part of a citizenship or social sciences curriculum? Sections II and III explore ways in which memory of sensitive issues related to the past, to war, or to massacres may be addressed. Are there new methodologies or approaches which make this possible? How can students understand situations involving intolerance and injustice?

The Oxford Handbook of Quantitative Methods in Psychology: Vol. 2

PSYCHOLOGY: MODULES FOR ACTIVE LEARNING is a best-selling text by renowned author and educator Dennis Coon and co-authors John O. Mitterer and Tanya Martini. This fourteenth edition continues to combine the highly effective SQ4R (Survey, Question, Read, Recite, Reflect, Review) active learning system, an engaging style, appealing visuals, and detailed coverage of core topics and cutting-edge research in one remarkable, comprehensive text. Fully updated, the new edition builds on the proven modular format and on the teaching and learning tools integrated throughout the text. While the text provides a broad overview of essential psychology topics ideal for introductory courses, its modular design also readily supports more specialized curricula, allowing instructors to use the self-contained instructional units in any combination and order. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This survey of the changes in education and socialization in the former USSR examines the institutions that are shaping the first post-Soviet generation. Chapters provide reports on such questions as diversification and the development of independent schools, curriculum reform and democratization.

This book provides a platform for international scholars to share evidence for effective practices in integrated STEM education and contributes to the theoretical and practical knowledge gained from the diversity of approaches. Many publications on STEM education focus on one or two of the separate STEM disciplines without considering the potential for delivering STEM curriculum as an integrated approach.This publication analyzes the efficacy of an integrated STEM curriculum and instruction, providing evidence to examine and support various integrations. The volume focuses on the problems seen by academics working in the fields of science, technology, engineering and mathematics (STEM) and provides valuable, high quality research outcomes and a set of valued practices which have demonstrated their use and viability to improve the quality of integrated STEM education.

Life Orientation Gr12 L/b

As South Africa transitioned from apartheid to democracy, changes in the political landscape, as well as educational agendas and discourse on both a national and international level, shaped successive waves of curriculum reform over a relatively short period of time. Using South Africa as a germane example of how curriculum and pedagogy can interact and affect educational outcomes, Pedagogy in Poverty explores the potential of curricula to improve education in developing and emerging economies worldwide, and, ultimately, to reduce inequality. Incorporating detailed, empirical accounts of life inside South African classrooms, this book is a much-needed contribution to international debate surrounding optimal curriculum and pedagogic forms for children in poor schools. Classroom-level responses to curriculum policy reforms reveal some implications of the shifts between a radical, progressive approach and traditional curriculum forms. Hoadley focuses on the crucial role of teachers as mediators between curriculum and pedagogy, and explores key issues related to teacher knowledge by examining the teaching of reading and numeracy at the foundational levels of schooling. Offering a data-rich historical sociology of curriculum and pedagogic change, this book will appeal to academics, researchers and postgraduate students in the fields of education, sociology of education, curriculum studies, educational equality and school reform, and the policy and politics of education.

First published in 1997. Routledge is an imprint of Taylor & Francis, an informa company.

Despite recent progress in civil rights for sexual and gender minorities (SGM), ensuring SGM youth experience fairness, justice, inclusion, safety, and security in their schools and communities remains an ongoing challenge. In Growing into Resilience, André P. Grace and Kristopher Wells – co-founders of Camp fYrefly, a summer leadership camp for SGM youth – investigate how teachers, healthcare workers, and other professionals can help SGM youth build the human and material assets that will empower them to be happy, healthy, and resilient. Grace and Wells investigate the comprehensive (physical, mental, and sexual) health of SGM youth, emphasizing the role of caring professionals in an approach that that recognizes and accommodates SGM youth. Throughout, the authors draw upon the personal narratives of SGM youth, emphasizing how research, policy, and practice must act together for them to be able to thrive and fulfill their promise. Both a resource for those professionally engaged in work with sexual and gender minorities and a comprehensive text for use in courses on working with vulnerable youth populations, Growing into Resilience is a timely and transdisciplinary book.

Teaching Literature-Based Instructional Units: From Planning to Assessment provides an accessible roadmap to planning, designing, and implementing literature-based instructional units for the English Language arts (ELA) classroom. Understanding that unit plans are the building blocks of the ELA curriculum, Hansen and Vásquez outline the theoretical foundations and approaches behind teaching ELA and offer a framework to help readers make sound decisions about their content pedagogy. In so doing, this text offers research-based and straightforward guidance on planning instruction around key literary texts. Placing literature at the center of the ELA curriculum, the approaches in this book not only support students' reading, writing, listening, speaking, and digital media skills, but will also motivate and inspire them. Part 1 addresses how to choose unit themes and texts, discusses the importance of having a rationale for choices made, and examines the practical, philosophical, and historical approaches to teaching literature. Part 2 provides step-by-step instructions for designing literature-based units of instruction by using backwards design. The text focuses on assessment before moving into how to scaffold and sequence lessons to meet learning objectives, and concludes with consideration given to teaching ELA in virtual environments. The wealth of activities, strategies, exercises, examples, and templates in this book make this text essential reading for instructors and pre-service teachers in ELA pedagogical methods courses and for practicing teachers of literature instruction.

The past thirty years have seen a rapid expansion of testing, exposing students worldwide to tests that are now, more than ever, standardized and linked to high-stakes outcomes. The use of testing as a policy tool has been legitimized within international educational development to measure education quality in the vast majority of countries worldwide. The embedded nature and normative power of high-stakes standardized testing across national contexts can be understood as a global testing culture. The global testing culture permeates all aspects of education, from financing, to parental involvement, to teacher and student beliefs and practices. The reinforcing nature of the global testing culture leads to an environment where testing becomes synonymous with accountability, which becomes synonymous with education quality. Underlying the global testing culture is a set of values identified from the increasing literature on world culture. These include: education as a human right, academic intelligence, faith in science, decentralization, and neoliberalism. Each of these values highlights different aspects of the dialogue in support of high-stakes standardized testing. The wide approval of these values and their ability to legitimate various aspects of high-stakes testing reinforces the taken-for-granted notion that such tests are effective and appropriate education practices. However, a large body of literature emphasizes the negative unintended consequences – teaching to the test, reshaping the testing pool, the inequitable distribution of school resources and teachers' attention, and reconstructing the role of the student, teacher, and parent – commonly found when standardized, census-based tests are combined with high-stakes outcomes for educators or students. This book problematizes this culture by providing critical perspectives that challenge the assumptions of the culture and describe how the culture manifests in national contexts. The volume makes it clear that testing, per se, is not the problem. Instead it is how tests are administered, used or misused, and linked to accountability that provide the global testing culture with its powerful ability to shape schools and society and lead to its unintended, undesirable consequences.

The Oxford Handbook of Quantitative Methods in Psychology provides an accessible and comprehensive review of the current state-of-the-science and a one-stop source for learning and reviewing current best-practices in a quantitative methods across the social, behavioral, and educational sciences.
