**A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.**

**This directory provides the reader with quick-access to information on more than 8000 companies, research centres and academic institutions involved in new and established technologies. This edition offers more than 600 all-new organization listings, including new listings in Europe.**

The complete and authoritative guide to modern packaging technologies —updated and expanded From A to Z, The Wiley Encyclopedia of Packaging Technology, Third Edition covers all aspects of packaging technologies essential to the food and pharmaceutical industries, among others. This edition has been thoroughly updated and expanded to include important innovations and changes in materials, processes, and technologies that have occurred over the past decade. It is an invaluable resource for packaging technologists, scientists and engineers, students and educators, packaging material suppliers, packaging converters, packaging machinery manufacturers, processors, retailers, and regulatory agencies. In addition to updating and improving articles from the previous edition, new articles are also added to cover the recent advances and developments in packaging. Content new to this edition includes: Advanced packaging materials such as antimicrobial materials, biobased materials, nanocomposite materials, ceramic-coated films, and perforated films Advanced packaging technologies such as active and intelligent packaging, radio frequency identification (RFID), controlled release packaging, smart blending, nanotechnology, biosensor technology, and package integrity inspection Various aspects important to packaging such as sustainable packaging, migration, lipid oxidation, light protection, and intellectual property Contributions from experts in all-important aspects of packaging Extensive cross-referencing and easy-to-access information on all subjects Large, double-column format for easy reference

"Strength is built upon inner character. Character is built upon inner strength."Our ability to handle life's changes is a measure of our strength of character. Strength reveals itself through character. It takes true strength of character to redefine your limits by pushing past them. Scientists now know that character strengths can be learned, practiced and cultivated. Only you hold the key to your true potential. Unlock your character strengths.If you can be a better version of yourself, how do you want to be?When you think about yourself, what are your strengths?And how can you use them more in your life, work and learning?Most of the younger generation people feel that they have more potential that nobody has recognized. Are you among one of them? Do you know that if you recognize and spot these unseen potential and unknown strengths of your character, this will help by bringing out your potential and encouraging you to be the best version of yourself? Usually we do not know about ours or other people's character strengths. Our challenge is to know "What We Are" and "What They Are" and resolve to use them. But we lack in the spotting of these character traits and say-"Oh, they always under estimate me." This book deals with the classification of these character traits, character recognition, how to improve character traits, role of trait strength in various fields of life and science behind this strength. With a lot of related quotes and examples anyone can easily understand the quality of each character and improve himself.This classification is based on universally valued characters "Values In Action" (VIA) Institute on Character, which identifies these character strengths that all people have in varying degrees These strengths-influenced by the environment, personal interests, and other strengths-develop over time and define who we are and what others recognize in us.

The 2e of the gold standard text in the field, Nonhuman Primates in Biomedical Research provides a comprehensive, up-to-date review of the use of nonhuman primates in biomedical research. The publication emphasizes the biology and management, diseases, and biomedical models for nonhuman primate species most commonly used in research. Each chapter contains an extensive list of bibliographic references, photographs, and graphic illustrations to provide the reader with a thorough review of the subject. The Biology and Management volume provides basic information on the natural biology of nonhuman primates and the current state of knowledge regarding captive management. The Diseases volume provides thorough reviews of naturally occurring diseases of nonhuman primates, with a section on biomedical models reviewing contemporary nonhuman primate models of human diseases. Now in four color throughout, making the book more visually stimulating to enhance learning and ease of use Fully revised and updated, providing researchers with the most comprehensive review of the use of nonhuman primates in biomedical research Addresses commonly used nonhuman primate biomedical models, providing researchers with species-specific information

This volume offers a comprehensive listing, from the development of the Associate Degree Nursing (ADN) program in 1948 to the present, of all literature related to the ADN program. Any item related to the degree programs and their contributions, the AD nurses, their relation to nurses trained in other programs, and their role in the health care system is included. Published and unpublished items as well as dissertations, research reports and monographs, state and federal government documents, materials issued by state and national nursing groups, journal articles, and books are listed.

This volume of the NASA Historical Data Book is the seventh in the series that describes NASA's programs and projects. Covering the years 1989 through 1998, it includes the areas of launch systems, human spaceflight, and space science, continuing the volumes that addressed these topics during NASA's previous decades. Each chapter presents information, much of it statistical, addressing fun The first book of its kind to provide a full and comprehensive historical grounding of the contemporary issues of gender and women in science. Women in Science includes a detailed survey of the history behind the popular subject and engages the reader with a theoretical and informed understanding with significant issues like science and race, gender and technology and masculinity. It moves b focusing on individual women scientists.

*On Feb. 15, 2015, Kate Matrosova, an avid mountaineer, set off before sunrise for a traverse of the Northern Presidential Range in New Hampshire's White Mountains. Late the following day, rescuers carried her frozen body out of the mountains. What went wrong? Where You'll Find Me offers possible answers to that question.*

*Issues in Biochemistry and Biophysics Research: 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Amino Acids. The editors have built Issues in Biochemistry and Biophysics Research: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Amino Acids in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Biochemistry and Biophysics Research: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at http://www.ScholarlyEditions.com/.*

On a mountain somewhere above treeline, in some of the coldest and worst winter conditions imaginable, two men lie unconscious in the snow as explosive winds batter the nearby summits. In The Last Traverse: Tragedy and Resilience in the Winter Whites, Ty Gagne masterfully lays out the events that led up to an epic and legendary rescue attempt in severe and dangerous winter conditions in the White Mountains of New Hampshire. More than a cautionary tale, it is a tribute to all the volunteers and professionals who willingly put themselves in harm's way to save lives. This is a must read for anyone who hikes the Whites. "In his first book, Where You'll Find Me: Risk, Decisions, and the last Climb of Kate Matrosova, Ty Gagne established his credentials as a writer of well-researched and objective analysis of mountain accidents. Moreover, Where You'll Find Me reads like a novel, a book I couldn't put down. In his latest book, The Last Traverse, Gagne takes the combination of analysis and storytelling to a new level in a tale of survival and tragedy in the White Mountains." -Mark Synnott, author of The Impossible Climb: Alex Honnold, El Capitan, and the Climbing Life and The Third Pole: Mystery, Obsession, and Death on Mount Everest

*Global Advances in Biogeography brings together the work of more than 30 scientific authorities on biogeography from around the world. The book focuses on spatial and temporal variation of biological assemblages in relation to landscape complexity and environmental change. Global Advances embraces four themes: biogeographic theory and tests of concepts, the regional biogeography of individual taxa, the biogeography of complex landscapes, and the deep-time evolutionary biogeography of macrotaxa. In addition, the book provides a trove of new information about unusual landscapes, the natural history of a wide array of poorly known plant and animal species, and global conservation issues. This book is well illustrated with numerous maps, graphics, and photographs, and contains much new basic biogeographical information that is not available elsewhere. It will serve as an invaluable reference for professionals and members of the public interested in global biogeography, evolution, taxonomy, and conservation.*

*On September 27 - October 3, 2008 the NATO Advanced Research Workshop (ARW) on progress in high-energy physics and nuclear safety was held in Yalta, Crimea (see: http://crimea.bitp.kiev.ua and http://arw.bitp.kiev.ua). Nearly 50 leading experts in high-energy and nuclear physics from Eastern and Western Europe as well as from North America participated at the Workshop. The topics of the ARW covered recent results of theoretical and experimental studies in high-energy physics, accelerator, detection and nuclear technologies, as well as problems of nuclear safety in high-energy experimentation and in nuclear - dustry. The forthcoming experiments at the Large Hadron Collider (LHC) at CERN and cosmic-ray experiments were among the topics of the ARW. An important aspect of the Workshop was the scienti?c collaboration between nuclear physicists from East and West, especially in the ?eld of nuclear safety. The present book contains a selection of invited talks presented at the ARW. The papers are grouped in two parts.*

Development of new surfaces and coatings has resulted in scientific and technological progress. Coatings technology offers the possibility of producing advanced surface with tailored physicochemical and biological properties to meet requirements for food, biomedical, and environmental applications. This e-book gathers recently published papers that have attracted considerable attention and consideration, providing updates on this research topic. Specifically, this book collects new information on designed surfaces, coatings, and materials based on metals, polymers, ceramics, and composites. Some research describes the techniques for the preparation and characterization of gel, functional surfaces, and coatings, and their potential application in drug delivery or films for food preservation. Other studies outline different surface preparation processes or novel techniques for modifying the surface features for load-bearing implant applications. One paper focuses on the synthesis of stimuli-responsive hydrogels for new perspectives such as active coatings for cotton-cellulose fabric. A review is devoted to probiotic microencapsulation technology. The collection delivers scientific findings to both academic and industrial readers.
