needed to mount a production. In the second edition, he pulled back the curtain and showed the methods and processes that go on before the light plot is finalized and ready to go into the shop, even dealing with cutting the plot in half. In this third edition, Shelley throws the door wide open and shows step-by-step how to construct every lighting system in the Hokey light plot. Combining his diacritical analysis, killer drafting, and analytic use of the Slinky Method and Slinky Calculations, he presents the Periodic Table of Fundamental Lighting Systems and shows the basic methods used to create multi-instrument lighting systems. Highlights include: -Over 100 new topics, including analysis and application of the three categories of collaboration; a detailed examination of production meetings and one-on-one meetings; and meeting checklists with management and the creative team. -Over 50 new illustrations, including Shelley's Periodic Table of Fundamental Lighting Systems; groundplans, sections, and front elevations that illustrate basic system wash configurations for each direction of

light. -Analysis, calculation, and step-by-step technical construction of each lighting system in the Hokey light plot. -Explanation of a manufacturer's cut sheet, and how to apply basic formulas to determine the beam size, footcandles, and gel transmission for lighting instruments. -Updated process of pre-programming computer lighting consoles prior to the load-in. -Comprehensive overview of archiving paperwork and softcopy for a production.

This title explores the shadowy world of the short, pornographic cut-piece clips that appear in some films in Bangladesh and examines their place in South Asian film culture. It provides a portrait of the production, consumption and cinematic pleasures of stray celluloid and shines a light on Bangladesh's state-owned film industry and popular practices of the obscene. The book also reframes conceptual approaches to South Asian cinema and film culture, drawing on media anthropology to decode the cultural contradictions of Bangladesh since the 1990s. A wide-ranging exploration of how music has influenced science through the ages, from fifteenth-century cosmology to twentieth-century string theory. In the natural science of ancient Greece, music formed the meeting place between numbers and perception; for the next two millennia, Pesic tells us in *Music and the Making of Modern Science*, "liberal education" connected music with arithmetic, geometry, and astronomy within a fourfold study, the quadrivium. Peter Pesic argues provocatively that music has had a formative effect on the development of modern science—that music has been not just a charming accompaniment to thought but a conceptual force in its own right. Pesic explores a series of episodes in which music influenced science,

moments in which prior developments in music arguably affected subsequent aspects of natural science. He describes encounters between harmony and fifteenth-century cosmological controversies, between musical initiatives and irrational numbers, between vibrating bodies and the emergent electromagnetism. He offers lively accounts of how Newton applied the musical scale to define the colors in the spectrum; how Euler and others applied musical ideas to develop the wave theory of light; and how a harmonium prepared Max Planck to find a quantum theory that reengaged the mathematics of vibration. Taken together, these cases document the peculiar power of music—its autonomous force as a stream of experience, capable of stimulating insights different from those mediated by the verbal and the visual. An innovative e-book edition available for iOS devices will allow sound examples to be played by a touch and shows the score in a moving line.

How to Care for Aging Parents is the best and bestselling book of its kind, and its author, Virginia Morris, is the go-to person on eldercare for the media, appearing on Oprah, TODAY, and Good Morning America, among many other outlets. How to Care for Aging Parents is an authoritative, clear, and comforting source of advice and support for the ever-growing number of Americans—now 42 million—who care for an elderly parent, relative, or friend. And now, in its third edition, it is completely overhauled and updated, chapter-by-chapter and page-by-page, with the most recent medical findings and recommendations. It includes a whole new chapter on fraud; details on the latest “aging in place” technologies; more helpful online resources; and everything you need to know about current laws and regulations. Also new are fill-in worksheets for gathering specifics on medications; caregivers’ names, schedules, and contact info; doctors’ phone numbers and addresses; and other essential

information in one handy place at the back of the book. From having that first difficult conversation to arranging a funeral and dealing with grief—and all of the other important issues in between—How to Care for Aging Parents is the essential guide. Marketing experts predict that by 2009, nearly 90% of all cell phones will contain a camera, as manufacturers race to create cheaper, easier-to-use models with more sophisticated cameras, more pixels, flash units and even multiple lenses. Already revolutionizing audiovisual communication, it's a trend that will only grow more explosively—and who better than National Geographic to create a how-to book aimed directly at the millions who carry a camera phone everywhere and want to make the most of it? Created by two top professionals, this generously illustrated nuts-and-bolts guide is the first of its kind to treat these units as genuine cameras instead of novelties, and the only one to include a full-color photo-essay demonstrating the full capabilities of the latest camera phones. In five easy-to-read chapters, the book explains how to choose good equipment; take better pictures; and store,

In Making Light Raymond Knapp traces the musical legacy of German Idealism as it led to the declining prestige of composers such as Haydn while influencing the development of American popular music in the nineteenth century. Knapp identifies in Haydn and in early popular American musical cultures such as minstrelsy and operetta a strain of high camp—a mode of engagement that relishes both the superficial and serious aspects of an aesthetic experience—that runs antithetical to German Idealism's musical paradigms. By considering the disservice done to Haydn by German Idealism alongside the emergence of musical camp in American popular music,

Knapp outlines a common ground: a humanistically based aesthetic of shared pleasure that points to ways in which camp receptive modes might rejuvenate the original appeal of Haydn's music that has mostly eluded audiences. In so doing, Knapp remaps the historiographical modes and systems of critical evaluation that dominate musicology while troubling the divide between serious and popular music.
