the course is relatively easy for students during the early stages as material is presented in a familiar, concrete setting. However, when abstract concepts are

introduced,
students often
hit a wall.

Instructors seem
to agree that
certain concepts
(such as linear
independence,
spanning,
subspace, vector
space, and linear
transformations)

are not easily understood and require time to assimilate.

These concepts are fundamental to the study of linear algebra, so students' understanding of them is vital to mastering the
