The text also explains market failures in terms of free market choice, externalities of failures, monopolies, as well as scarcity and choices leading to poverty. When economic policies are considered by the state, there are trade-offs that are necessary in the exchange. For example (no. 1), if more money is spent on transfer payments, less will be left for education, national defense, infrastructure. Another example (no. 2) is when the

fallen into economic crises since the late 1990s. In *The Limits of Fiscal, Monetary, and Trade Policies: International Comparisons and Solutions*, Jonathan E Leightner convincingly argues that the fundamental cause of the global malaise is a surplus of savings. He provides compelling evidence (via statistical estimates) that fiscal, monetary, and trade policies cannot solve the resulting problems since their effectiveness has plummeted. Leightner also shows that the solution to the current global economic woes is a “consumption driven growth model” (which China advocates but has yet to fully implement) because when there is insufficient consumption, excess savings will remain idle, seek a return from rent or deception, or

The book presents an authoritative and comprehensive summary and original critique of modern macroeconomic approaches by a scholar whose own contribution to the field is considerable. These are: the Keynesian school of macroeconomics; the monetarist school; the New Classical school; the New-Keynesian school; supply side macroeconomics, and 'non-monetary' models of macroeconomics - the real business cycle theory and the 'structuralist
