In addition to being essential for safe and effective patient care, medical equipment also has significant impact on the income and, thus, vitality of healthcare organizations. For this reason, its maintenance and management requires careful supervision by healthcare administrators, many of whom may not have the technical background to understand all of the relevant factors. This book presents the basic elements of medical equipment maintenance and management required of healthcare leaders responsible for managing or overseeing this function. It will enable these individuals to understand their professional responsibilities, as well as what they should expect from their supervised staff and how to measure and benchmark staff performance against equivalent performance levels at similar organizations. The book opens with a foundational summary of the laws, regulations, codes, and standards that are applicable to the maintenance and management of medical equipment in healthcare organizations. Next, the core functions of the team responsible for maintenance and management are described in sufficient detail for managers and overseers. Then the methods and measures for determining the effectiveness and efficiency of equipment maintenance and management are presented to allow performance management and benchmarking comparisons. The challenges and opportunities of managing healthcare organizations of different sizes, acuity levels, and geographical locations are discussed. Extensive bibliographic sources and material for further study are provided to assist students and healthcare leaders interested in acquiring more detailed knowledge. A Five Year Plan for the OCEI Support Facility at St. Juliens Creek, Portsmouth, Virginia, is presented. The plan is developed from internally generated planning documents, information collected in a detailed site assessment, and a Basic Facility Requirements (BFR) study. The analysis indicates that the existing facility has adequate storage, maintenance, and administrative spaces, but that significant changes and improvements are warranted to meet future support requirements of the OCEI and to increase the facility's efficiency and habitability. Repairs, modifications and additions are proposed to meet these needs. The recommended changes are costed and prioritized for FY84 through FY88. Expeditions decisions regarding the near and long term futures of certain facility components are required in order to insure continuity of operation. (Author).
