Marcus Heidmann explores the role of management accounting systems (MAS) in strategic sensemaking. Based on cognitive theories, the author defines strategic sensemaking as a learning process with observation, interpretation, and communication as the relevant process steps on the individual level. He illustrates the impact of MAS on these cognitive processes by an exploratory multiple-case study design.

Bringing together literature from diverse sources to cover budgeting, financial accounting and reporting, auditing and comparative international studies, this collection covers 40 year of public sector accounting.

The only truly Australasian text on Strategic Management, written specifically for the unique requirements of modern Australasian businesses - from start-ups to multinationals. Assuming an international perspective but written for an Australian and New Zealand audience, the text highlights how all organisations are affected by international issues, whether through suppliers, operations, competitors or customers. To provide a clear and practical application of theory, ten new case studies have been included in this edition to respond to the demand for them at this level of study in this discipline. Additionally, the text allows a more theoretical perspective to be taken than is normally possible in strategy texts. This suits undergraduate courses where

students have little practical experience and where conceptual principles are being developed. However, postgraduate students seeking a more conceptual understanding also find this emphasis valuable. Theoretically strong, Strategic Management covers all theories and major research, yet has a practical, unifying and integrated theme in the environment-strategy-capability gap analysis model.

In this book, Shank and Govindarajan demonstrate how strategic cost management - an analytical framework which relates meaningful accounting information to a firm's business strategy - is changing accounting practices in leading companies. Using case studies, including Ciba-Geigy, Ford, Motorola and Texas Instruments, they show how the tools of strategic cost management - value chain analysis, strategic positioning analysis and cost driver analysis - provide a sustainable competitive advantage over companies whose cost systems are in disarray.

While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.
