Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's Microeconomics bridges the gap between today's theory and practice, with a strong empirical dimension that lets students test theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.

This book emphasizes the use of accounting systems to conduct business operations with special emphasis on reporting requirements. Because over 90 percent of accounting systems are licensed rather than internally custom developed, this book gives students the theoretical foundation and skills they will need to conduct a requirements analysis, search for a commercial solution, and successfully implement the software package selected. In addition to learning the essential AIS concepts (see table of contents), you will see much discussion and examples of commercial accounting systems software as it is designed and as it should be designed. Each chapter contains a set of learning objectives to facilitate the assessment of learning outcomes and includes several hands-on learning activities at the end of the chapters.
