The University of Pennsylvania School of Social Policy and Practice is an acknowledged leader in cultivating theoretical and practical social work knowledge. Celebrating the School’s centennial, this volume heralds the progressive thinking of its leaders and students while setting the stage for the next century of work at the frontier of the field. Following the School’s approach, the book upholds the core values of social work: a clear understanding and respect for the past; analysis of current and professional issues; a vision of the future that reflects a commitment to social change; and the dissemination of knowledge on local, national, and global issues. The intellectual history of the School’s founders, faculty, and students is reconstructed through an extensive collection of articles on a variety of social work themes that employ both data-based research and theoretical analysis. The volume contains key contributions from practitioners affiliated with the School, from the early pioneers in 1908 to recent alumni and current faculty in 2008. A Century of Social Work and Social Welfare at Penn will be an enduring resource for scholars and historians of social work and social welfare as well as a point of reference and pride for those influenced by the achievements of the School’s faculty and students.

Hunter Allen and Andy Coggan, PhD have completely revised the book that made power meters understandable for amateur and professional cyclists and triathletes. Power meters have become essential tools for competitive cyclists and triathletes. No training tool can unlock as much speed and endurance as a power meter—for those who understand how to interpret their data. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider’s abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness, and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals This updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout. Training and Racing with a Power Meter, will continue to be the definitive guide to the most important training tool ever developed for endurance sports.

The Federal Employees’ Compensation Act (FECA) is the workers’ compensation program for federal employees. Like all workers’ compensation programs, FECA pays disability, survivors, and medical benefits, without fault, to employees who are injured or become ill in the course of their federal employment and the survivors of employees killed on the job. The FECA program is administered by the Department of Labor (DOL) and the costs of benefits are paid by each employees’ host agency. Employees of the U.S. Postal Service (USPS) currently comprise the largest group of FECA beneficiaries and are responsible for the largest share of FECA benefits. This book examines the key policy issues facing the FECA today, including the disproportionate share of claims and program costs attributed to postal workers, the payment of FECA benefits after retirement age, the overall generosity of FECA disability benefits as compared with those offered by the states, and the overall administration of the FECA program.

The Robert Trent Jones Golf Trail tells how a bold, imaginative investment by a public employee pension fund turned into a world-class tourist attraction that helped change the image and boost the economy of an entire state. The pension fund was the Retirement Systems of Alabama, and its alternative investment was in a string of golf courses and affiliated high-end hotels and spas. In business-speak, this was an “economically targeted investment” designed to diversify returns, create jobs, and increase tax revenue. Twenty-five years later, the Robert Trent Jones Golf Trail is known worldwide for the quality and beauty of its courses and the hospitality and elegance of its resorts. It has significantly increased Alabama’s infrastructure for tourism and conventions, provided millions upon millions in new tax revenues, spurred construction of thousands of units of adjacent housing, and helped persuade other businesses to locate in the state. Making the Golf Trail a reality involved not only the initial vision of CEO David G. Bronner and his associates at RSA, but also the design genius and reputation of Robert Trent Jones Sr. and the hard work of many dedicated engineers and builders. It also required the cooperation of scores of local and state elected officials and economic developers. This book is the illustrated historical account of the financial, legal, political, and economic impact details of RSA’s investment in the RTJ Golf Trail. Such a detailed history could not have been written without the years of economic analysis conducted by author Mark Fagan dating back to the earliest stages of the concept. Fagan’s ongoing involvement with Dr. Bronner and those working to develop the Trail made possible the mammoth one-of-a-kind history that is presented in this book.

Kevin Mitnick is the most infamous hacker offers an insider’s view of the low-tech threats to our high-tech security Kevin Mitnick’s exploits as a cyber-desperado and fugitive form one of the most exhaustive FBI manhunts in history and have spawned dozens of articles, books, films, and documentaries. Since his release from federal prison, in 1998, Mitnick has turned his life around and established himself as one of the most sought-after computer security experts worldwide. Now, in The Art of Deception, the world’s most notorious hacker gives new meaning to the old adage, “It takes a thief to catch a thief.” Focusing on the human factors involved with information security, Mitnick explains why all the firewalls and encryption protocols in the world will never be enough to stop a savvy grifter intent on filling a corporate database or an irate employee determined to crash a system. With the help of many fascinating true stories of successful attacks on business and government, he illustrates just how susceptible even the most locked-down information systems are to a slick con artist impersonating an IRS agent. Narrating from the points of view of both the attacker and the victims, he explains why each attack was so successful and how it could have been prevented in an engaging and highly readable style reminiscent of a true-crime novel. And, perhaps most importantly, Mitnick offers advice for preventing these types of social engineering hacks through security protocols, training programs, and manuals that address the human element of security.

This book comes out at a very opportune time when the sector is struggling with sanitation marketing that is considered an organic next step for rural communities that have been declared open defecation free. Besides, this publication comes in to address the gaps that face the peri-urban spaces that are facing population explosion and require innovative ways of dealing with mostly non-sewered sanitation services. This guide/manual was developed as part of a training package to support business development skills training for local sanitation entrepreneurs in Kenya. Financial and technical support was provided by the United States Agency for International Development (USAID) under the Kenya integrated water and sanitation (KIWASH) project. KIWASH was a five year (2015-2020) project implemented by the Development Alternatives Incorporation (DAI) across nine counties. One of the key goals of KIWASH was to help trigger and activate demand for low cost affordable sanitation technologies in rural and low income communities. The overall objective of this manual is to equip sanitation specialists and public resource persons with the basic concepts and tools, to facilitate entrepreneurship and financial literacy training for start-up sanitation entrepreneurs in rural communities. Specifically, this manual is designed to help participants: 1) Learn the basic concepts of entrepreneurship and characteristics of successful entrepreneurs; 2) Learn and practice essential marketing techniques for sanitation products and services; 3) Develop money management competencies necessary to succeed as a small-scale entrepreneur; 4) Build necessary leadership and management skills to grow successful sanitation enterprises. The ten year anniversary of the book offers an excellent opportunity to publish a second edition. Several aspects of the book have evolved considerably since its first printing. For instance, substantial revision to the internship, licensure, and certification processes has occurred, and are reflected in this resource. Much of the literature on clinical psychology, cultural sensitivity, and the current job market is updated. Changes in technology have large effects on teaching and practicing clinical psychology. These modifications are needed to offer appropriate and updated information for students. In short, virtually every chapter has substantial modification to ensure that the material is accurate and up to date.

The techniques described in each chapter are designed to complement and supplement cognitive-behavioral treatment protocols—and, ultimately, to help clinicians transcend the limits of those protocols. For those veterans who do not respond productively to—or who have simply little interest in—office-based, regimented, and symptom-focused treatments, the innovative approaches laid out in Healing War Trauma will inspire and inform both clinicians and veterans as they chart new paths to healing.

In the years 2015 and 2016 more than 2.5 million refugees came to the European Union to seek asylum. In these years these refugees acquired professional qualifications in their home countries, but despite these qualifications they often struggle integrating into the labour market. The complex recognition process for their qualifications is one of the main reasons. At the same time the European Union is facing an alarming gap of SME successors and entrepreneurs. More entrepreneurs are needed and refugees need an easier way to become integrated into the labour market in their host country. These two principals were combined in the NEW ENTREPRENEURS project. A procedure for the identification of entrepreneurial potential builds the foundation. This is accompanied with a language training and a motivation and creativity training. To promote entrepreneurship a special training was developed, tested, evaluated and implemented, accompanied with a business start-up and takeover training. A comprehensive coaching process accompanies the whole process. The developed procedures and trainings were successfully applied also to natives in Hungary, meaning that the range of the potential beneficiaries is even larger than expected. This publication contains the relevant curricula, application notes and experiences as a result of the project NEW ENTREPRENEURS with the following partners: Hanse-Parlament (DE), Berufsakademie Hamburg (DE), Institut für angewandte Gewerbeforschung (AT), Ipartest ü letek Orsz & gos Szó véts ége (HU), T21 Trasferimento Tecnologico e innovazione scari (IT)

Presentation Patterns is the first book on presentations that categorizes and organizes the building blocks (or patterns) that you’ll need to communicate effectively using presentation tools like Keynote and PowerPoint. Patterns are like the lower-level steps found inside recipes: they are the techniques you must master to be considered a chef, and this book to construct your own recipes for different contexts, such as business meetings, technical demonstrations, scientific expositions, and keynotes, just to name a few. Although there are no such things as antirecipes, this book shows you lots of antipatterns—things you should avoid doing in presentations. Modern presentation tools like Keynote and PowerPoint make it so easy to create presentations that you can be tempted to think that you know how to avoid them. Each pattern is introduced with a memorable name, a definition, and a brief explanation of motivation. Readers learn where the pattern applies, the consequences of applying it, and how to apply it. The authors also identify critical antipatterns: clichés, fallacies, and design mistakes that cause presentations to fail. You know how. Presentation Patterns will help you Plan what you’ll say, who you’ll say it to, how long you’ll talk, and where you’ll present. Perfectly calibrate your presentation to your audience Use the storyteller’s “narrative arc” to full advantage Strengthen your credibility—and avoid mistakes that hurt it Hone your message before you even start to deliver it that support your message instead of hindering it Create highly effective “infodocks” that work when you’re not able to deliver a talk in person Construct slides that really communicate and avoid “Ant Fonts,” “Floodmarks,” “Alienating Artifacts,” and other errors Master 13 powerful techniques for delivering your presentation with power, authority, and grace Handy reference or read it from start to finish, it will be a revelation: an entirely new language for systematically planning, creating, and delivering more powerful presentations. You’ll quickly find it indispensable—no matter what you’re presenting, who your audiences are, or what message you’re driving home.
