*Bariatric and Metabolic Surgery is recognized to be an important and effective option for the treatment of severe obesity and the various associated conditions and diseases. This book presents state of the art knowledge on such surgery with the aim of facilitating the sharing and exchange of knowledge, documenting effective techniques, and enhancing safety and outcomes. All technical aspects are covered in detail, and the text is complemented by many helpful illustrations. A further key feature is the provision of accompanying surgical videos, which will be of value to both novice and experienced surgeons. This textbook will be a great asset in clinical practice for all who are involved or interested in bariatric and metabolic surgery.*

*Particles are one of the most difficult aspects of the Japanese language. This is precisely why there are a good number of books on the market dealing with the subject. Most of these books take up particles as independent entities, so that after having studied them, students are, if all goes well, familiar with the functions of the individual*

*particles. One unfortunate side to this approach is that some of the particles share the same functions (but with slight differences), and so even though students may have grasped the general nature of each particle, they are not sure about the differences between the particles that have similar functions. Well-known language book author*

*Naoko Chino solves this problem by grouping the particles by function, defining them, giving samples of usage, and clarifying differences. Each section is followed by dual-purpose quizzes that allow readers to test and practice their knowledge. In this way, while not replacing general reference books on particles, this book goes a step beyond*

For students who find themselves befuddled when confronting such differences, How to Tell the Difference Between Japanese Particles should prove the perfect tool to further their understanding. For the most current mechanical codes that address the design and installation of the most current mechanical systems, use the 2015 INTERNATIONAL MECHANICAL CODE SOFT COVER. Designed to provide comprehensive regulations for mechanical systems and equipment, it includes coverage of HVAC, exhaust systems, chimneys and vents

heaters, refrigerators, hydronic piping, and solar systems. This valuable reference uses prescriptive- and performance- related provisions to establish minimum regulations for a variety of systems. This updated code includes information on condensate pumps, and the ventilation system for enclosed parking garages.

Since its inception in 1968, software engineering has undergone numerous changes. In the early years, software development was organized using the waterfall model, where the focus of requirements engineering was on a frozen requirements document, which formed the basis of the subsequent design and implementation process. Since

developed faster, in larger and distributed teams, for pervasive as well as large-scale applications, with more flexibility, and with ongoing maintenance and quick release cycles. What do these ongoing developments and changes imply for the future of requirements engineering and software design? Now is the time to rethink the role of req

systems in transportation, life sciences, banking, e-government and other areas. Past assumptions need to be questioned, research and education need to be rethought. This book is based on the Design Requirements Workshop, held June 3-6, 2007, in Cleveland, OH, USA, where leading researchers met to assess the current state of affairs

included were carefully reviewed and selected to give an overview of the current state of the art as well as an outlook on probable future challenges and priorities. After a general introduction to the workshop and the related NSF-funded project, the contributions are organized in topical sections on fundamental concepts of design: evolut

based requirements; requirements intertwining; and adapting requirements practices in different domains.

An extended arm or a Two-Headed dragon?

Proceedings of a Conference Held at the National Bureau of Standards, Gaithersburg, Maryland, September 14-16, 1992

For physics students interested in the mathematics they use, and for math students interested in seeing how some of the ideas of their discipline find realization in an applied setting. The presentation strikes a balance between formalism and application, between abstract and concrete. The interconnections among the various topics are clarified both by the use of vector spaces as a

central unifying theme, recurring throughout the book, and by putting ideas into their historical context. Enough of the essential formalism is included to make the presentation self-contained.

In 2013 the European Commission launched its legislative proposal to create a European Public Prosecutor's Office. The proposal provoked fierce debates, politically as well as on the academic level. Many national parliaments opposed and submitted formally their grievances to the Commission. Negotiations on the proposal between Member States are still ongoing. The T.M.C. Asser

Instituut held the first international conference on this unprecedented proposal. This book reflects the main results of that conference. It provides a concise background of and reasoning for the introduction of this new EU body entrusted with far reaching judicial powers disclosing important legal and policy implications. Within its hitherto limited scope the existing system of judicial

cooperation between EU Member States will change fundamentally, directly affecting the functioning of national courts and public prosecutions offices. How will this evolve? This book will help answering fundamental questions involved.

This widely acclaimed book, first published in 1974, was a classic from its first day in print. Written in a direct, inviting way by Harry Braverman, whose years as an industrial worker gave him rich personal insight into work, Labor and Monopoly Capital overturned the reigning ideologies of academic sociology. This

new edition features an introduction by John Bellamy Foster that sets the work in historical and theoretical context, as well as two rare articles by Braverman, "The Degradation of Work in the Twentieth Century" (1975) and "Two Comments" (1976), that add much to our understanding of the book. .

This book, a series of essays developed at a working conference on the integration of reading and writing, surveys the historical, cultural, situational and social forces that keep the teaching of writing separate, skew the curriculum to favor reading over writing, and discourage development of pedagogies that

integrate the language arts; examines the cognitive processes and strategies writers and readers use outside of school to develop and express their ideas; and discusses the challenge teachers face--to help students develop skills for reading and writing without isolating those skills from meaningful tasks and letting

students forget the reasons for these activities. The book contains the following chapters: Chapter 1, "On Collaboration" (Anne Haas Dyson); Chapter 2, Introduction (James Moffett) and "A Sisyphian Task: Historical Perspectives on Writing and Reading Instruction" (Geraldine Joncich Clifford); Chapter 3, Introduction

(Guadalupe Valdes) and "Writing and Reading in the Community" (Robert Gundlach and others); Chapter 4, Introduction (Sandra Murphy) and "The Problem-Solving Processes of Writers and Readers" (Ann S. Rosebery and others); Chapter 5, Introduction (Wallace Chafe) and "Writing and Reading Working Together" (Robert J.

Tierney and others); Chapter 6, Introduction (Mary K. Healy) and "Writing-and-Reading in the Classroom" (James Britton); and Chapter 7, "The Writing-Reading Connection: Taking Off the Handcuffs" (Art Peterson). (MS)

This book elaborates on the rules governing the prosecution and sentencing of multi-offenders. The term 'multi-offender' is used for an offender that has committed a series of offences (either in one single act or in different acts); hence the addition of 'multi' in 'multi-offender'. A crucial element thereto is that

the whole series of offences -- which make the offender a multi-offender -- has been committed before being subject to a final conviction. A comparative EU-study was conducted, focusing on the rules governing multi-offenders within different EU Member States. It reveals that this type of offenders challenge both the

legislator and the prosecution and judges: when the offences are prosecuted in one go, the challenges are linked to finding an appropriate way to assess the severity of the criminal behaviour; if however the offences are prosecuted in several simultaneous or consecutive proceedings, the challenges are linked to

taking account of the simultaneous or past proceeding. These challenges only grow if proceedings take place in different EU Member States. The analysis presented in this book is essential reading for EU policy makers, national policy makers, academics and defence lawyers throughout the EU working with multi-

offenders. Undoubtedly, it will be an asset to their work in both mere national as well as in cross-border cases.
