Defining Management charts the expansion of management as an idea and practice from a time when it was limited to churches and households to its current ubiquity, focusing in particular on the role of business schools, consultants, and business media in this process. How did an entire industry develop around business schools, consultants, and business media who are now widely considered the authorities regarding best management practice? This book shows how these actors – on their own and in interaction – became taken-for-granted and gained such definitional power over management and managers, expanded across the globe from often modest and not always respected origins, and impacted, and continue to impact businesses and, increasingly, the broader economic and social context. Building on extant and some new research, the book is unique in bringing together issues and actors that have been examined elsewhere separately. Any student or professional of management interested in the evolution of their field or the rise of business schools, consultants and business media will find this book both novel and thought-provoking.

As a result of prevailing monetary conditions since the global financial crisis, the world has witnessed unprecedented growth in global corporate credit markets. Yet, despite the trillions of dollars put to work in the debt capital markets, corporate credit is still an unfamiliar concept to most investors compared to other asset classes, such as equities and commodities. Every red-top newspaper and 24-hour news service is happy to report the latest twitch in the Dow, FTSE or Stoxx indices but momentous moves in the iBoxx or iTraxx go unmentioned. And whereas many a talking head is happy to pose as an equity analyst, few feel comfortable venturing into the arcana of credit. Yet the corporate credit market, as the authors of this new book show, is both materially larger than its equity peer and has shown more attractive risk/reward characteristics over the last 90-odd years. In Opening Credit, career credit professionals, Justin McGowan and Duncan Sankey, aim to redress this by drawing on their more than 50 years' collective experience in the field to elucidate a practitioner's approach to corporate credit investment. Whilst explaining the basics of traditional credit analysis and affirming its value, McGowan and Sankey also caution against its shortcomings. They demonstrate the need both to penetrate the veil of accounting to get to the economic reality behind the annuals and interim numbers and to analyse the individuals that drive them - the key executives and board members. They employ a range of cogent and easy-to-follow case studies to illustrate the value of their executive- and governance-led approach, which places management front and centre in understanding corporate credit. Opening Credit will appeal to all those seeking a better understanding of corporate credit, including analysts looking to develop their skills, fund managers (especially those with an eye to SRI), bankers, IFAs, financial journalists, academics and students of finance.

Despite noticeable growth in Islamic banking and finance literature in recent years, very few published books in this area deal with supervisory and regulatory issues in Islamic banking – theoretically or empirically – and none with the critical issue of risks involved in liquidity management of Islamic banks. This unique book is the first of its kind in dealing with challenges these financial institutions face in the absence of interest rate mechanism and debt-based financial instruments. The book examines critically issues involve in managing the risk of liquidity management for these types of institutions, including those stemming from Basel requirements. It then offers an alternative regulatory framework more appropriately suited for such banks without compromising safety and security. The book's unique features and innovative dimensions diagnostically differentiate between Islamic banks and conventional banks as related to liquidity management risks. It proposes a risk-sharing regulatory framework that, once implemented, would mitigate risks posed by balance-sheet mismatches. The book aims to assist regulators, supervisors, Islamic finance practitioners, academicians and other relevant stakeholders.

This book looks both backward and forward with regard to the European Union's political strategies towards its neighbouring countries. By bringing together the perspectives of critical geopolitics, policy studies and border studies, it presents a comprehensive review of the European Neighbourhood Policy and how it impacts the ongoing construction of the EU's external frontiers. Is the EU committed to promoting integration in a 'wider' European space, or is a "fortress Europe" emerging where the strengthening of internal cohesion is coupled with the militarisation of its external borders? The book aims to problematize this question by showing how the EU's external policies are based on a mixture of openness and closure, inclusion and exclusion, cooperation and securitisation. The European Neighbourhood Policy is a controversial strategy where regionalization and bordering, homogenisations and differentiations, centrifugal and centripetal forces proceed side-by-side, in an explicit attempt to construct a selective, mobile and fragmented border. A specific focus is devoted to the diversity of geo-strategies the EU is pursuing in its neighbouring countries and regions, macro-regional strategies and cross-border cooperation initiatives as new scales of cooperation, and the role of other global players.
