ubiquitous Ferguson TE20, the Masey-Ferguson 35 was a product of the merger of Massey-Harris and Ferguson. It incorporated numerous improvements and new features and became massively popular worldwide. Its companion, the 65 model, was introduced shortly afterwards and was a larger tractor, offered with the revolutionary Multi Power system that gave 12 forward and four reverse gears. Durable and versatile, these tractors are still a practical proposition today, and even unrestored examples command high prices. Michael Thorne, author of Ferguson TE20 in Detail, continues the

Australia has some of the world's largest and most labor-efficient farms, and tractors are an essential part of their operations. The average Australian farm has three or more tractors. In this historical overview, the author documents the development of the indigenous tractor industry, from the McDonald Imperial of 1909 to more recent cane, olive, and grape harvesters. Australian Tractors puts the industry in an economic and social history context.

and Nasarawa states in Nigeria. Following are the key findings from simple descriptive statistics: (1) owner-operators who buy tractors from the private market or from private individuals are more efficient than those who receive tractors through government programs, providing services to a greater area at lower costs, including during the off-peak season; (2) providing access to a wider range of tractor horsepowers may improve efficiency over diverse soil types; (3) similar to some Asian countries in the 1980s, tractor operations are mostly concentrated in interviewees' local home

populations, the highest levels of poverty, poor health, and illiteracy, and the greatest need for improvement in working conditions. And as the marketplace and the workforce goes increasingly global, accountability with regard to the abuse of cheap labor in developing countries is becoming an issue. Presenting a global view of the state of ergonomics in industrially developing countries (IDCs), Ergonomics in Developing Regions: Needs and Applications identifies problems, offers solutions, and explores costs and benefits. It defines the steps that can be taken to close the gap between working conditions in affluent and deprived nations. The book highlights the plight of millions of laborers and the

poor working conditions pertaining to industrially less developed countries where the working environment mirrors the socio-economic deprivation of the people. Woven throughout the 34 chapters of this book is the tenet that good ergonomics is good economics. The chapters include examples of low-cost interventions at the work place in IDCs. The contributors discuss the ripple effect of ergonomics beyond the workplace to the betterment of life in general for the huge workforce in IDCs around the world. They focus on work-site problems and ergonomic solutions in developing regions around the globe, covering work conducted in Asia, Africa, South America, Russia, and China. Examining the

factors unique to IDCs, leading ergonomists provide insights as to how sustainable progress is achievable in the developing world. They demonstrate the need for a more inclusive macro approach, citing managerial input essential for sustainable progress. With a panel of authors that reflects the multidisciplinary nature of the field, this book chronicles the nuances of differences in aim, practice, and outcome when ergonomists tackle Developing World problems from a Developing World perspective.

turns his attention to the outstandingly successful and well-loved 100 Series of tractors. Of the 100 range, the most popular was and remains the 135. Half a million 135s were built at Massey Ferguson's factory in Coventry alone, with production overseas on top of this figure. Another big success was the larger, more powerful 165, with nearly 200,000 sold. This model, like the 135, is among the most popular and sought-after classic tractors today, although many 135s and 165s are still in active use around the world, in spite of their age. The 100 range included a great number of other models, and in addition to the 135 and 165, which are given in-depth treatment here, important models described in detail are the

A product and company review of Massey, Harris, Massey-Harris, Ferguson and Massey-Ferguson

The international or multi-national corporation has become an important phenomenon in today's business world and Massey-Ferguson is an ideal example of such an organization. Through its predecessor companies it can train its history to 1847, and so it has encountered virtually all the difficulties and developments of the last

hundred years in business organization and management science. The development has not been straightforward for it has been much more than the growth of a single company in an expanding market. Management reorganization and the introduction of new management planning and control techniques contributed a good deal to the company's expansion, and because mergers played a vital role, the history of other companies is also involved. Dr. Neufeld's study concentrates on the years after the Second World War, a period in which the company's international operations became increasingly complex. He records the events that helped to shape the company's character

and structure, and at the same time investigates the company's successes and failures in adjusting to a changing national and international business environment. His study reveals why Massey-Ferguson developed into a global corporation, an organization that considers the whole of the international environment when making decisions relating to the allocation of its marketing, purchasing, manufacturing and engineering activities.
